Subject: Transportation

Mrs. Katherine Abbott  
Chatham, NJ 07928

Comments: Do an advertising campaign to get people to stop idling their cars. People idle while waiting to pick up children at schools, sports centers, or even in parking lots outside fast food places. Each gallon of gas burned contributes 19 pounds of CO2 according to the US EPA. Kicking the idling habit would save significant of CO2 emissions if you take into account all cars in NJ idling avg 10 minutes per day.
