Subject: [EXTERNAL] Governor's Energy Master Plan
Date: Friday, September 06, 2019 8:52:19 PM

Hello,

The Governor's Energy Master Plan is currently inadequate to meet the climate emergency. It must include a moratorium on all fossil fuel projects until greenhouse gas emissions are effectively regulated. These new projects will increase our emissions by over 30%! We must aim for 100% clean renewable energy in electricity by 2035 and be fully decarbonized by 2050.

Thank you,
Brian Haas
