Subject: [EXTERNAL] Energy Master Plan
Date: Wednesday, September 11, 2019 10:35:12 AM

The Governor's Energy Master Plan is currently inadequate to meet the climate emergency. It must include a moratorium on all new fossil fuel projects. It must also include a realistic plan for new, high-quality jobs in the green economy. We do not have time to waste and the lack of milestones to meet these ambitious, science-based targets is unacceptable.

Solutions must be proactive and far reaching. Middle ground solutions are no longer acceptable. If a moratorium on new fossil fuel projects is not enacted, New Jersey will become climate wasteland.
