New Jersey should lead the way in addressing the climate crisis, so I believe a thorough modeling that accounts for more scenarios is necessary. Concerning the Integrated Energy Plan (IEP), I urge the following improvements, while noting that that the Global Warming Response Act :

- Modeling for net-zero emissions for NJ and 100% clean energy by 2030, for which proponents of the Green New Deal are advocating
- Modeling interim scenarios of reducing NJ emissions 45% before 2030, as recommended by the Intergovernmental Panel on Climate Change (IPCC) 2018 report.
- Modeling for an immediate moratorium on new fossil fuel infrastructure, as many environmental organizations are calling for.
- An accurate estimate of the global warming potential of short-lived climate pollutants such as methane and black carbon
- Modeling for a goal of carbon-free energy for New Jersey
- The flexibility to use the best of some plans now and others later

Best,
Anthony Chan
