To Whom,

I appreciate your hard work on this most important of issues. Your challenge is to move us as fast as possible towards energy sources do not emit GHG.

1. You do not want to extend or complete any current projects since this will become a glaring unrealized gain.
2. Reinstate a more accountable form of RGGI soon.
3. Electrify transportation providing strong EV rebates for low income families.
4. Pass mandates for solar construction and refurbishing and installation.
5. Maximize coastal wind Turbine installation.
6. Consider geothermal methods.

We need a real big push - we are in a race against time. Remember our burdened communities.

Regards, Christine Dunbar, 101 Wagon Wheel, Sparta NJ 07871
