Subject: [EXTERNAL] IEP Feedback

Please address the needed changes in the IEP and EMP before finalizing the plans. I want to be proud of New Jersey again....we need to show the rest of they US that we are a leading force in addressing our climate emergency. We need to implement a more stringent plan that gets us closer to the goals set by the IPCC, namely a 45% reduction in greenhouse gas emissions by 2030. That's 10 years from now!

To get there, please address the following aspects of the plan:

- Add modeling scenarios that cut NJ's emissions 45% before 2030 as recommended by IPCC 2018 report
- Add modeling for a goal of carbon-free energy for New Jersey
- Add an immediate moratorium on any new fossil fuel infrastructure
- Add front loading emission reductions to have the most significant impact on our climate emergency
- Accurately estimate the global warming potential of short-lived climate pollutants like methane and black carbon
- Count the social costs of continued reliance and use of fossil fuels in your models
- Add specific mechanisms for reducing fossil fuel use quickly

Thanks for your attention,
