Subject: [EXTERNAL] IEP Feedback

To Whom It May Concern:

New Jersey can and should be a global leader in addressing our climate emergency. Instead, I find critical structural deficiencies in the Integrated Energy Plan that MUST be corrected before the IEP and EMP are finalized. Improvements to the IEP should include:

- modeling for immediate moratorium on any new fossil fuel infrastructure
- any modeling scenarios that cut NJ's emissions 45% before 2030 as recommended by IPCC 2018 report
- modeling for a goal of carbon-free energy for New Jersey
- front loading emission reductions to have the most significant impact on our climate emergency
- accurately estimating the global warming potential of short-lived climate pollutants like methane and black carbon
- counting social costs of continued reliance and use of fossil fuels
- flexibility to use the best of some plans now and others later
- valuing meaningful public input
- consideration of potential impact of future regulatory and technological changes
- any mechanisms or recommendations of how to decrease fossil fuel use
