Dear NJBPU,

Thank you for continuing to advance and improve New Jersey's vision of 100% clean energy by 2050. However I believe the view point will only benefit corporate utility companies, not residential tax payers.

My clean energy company: State Renewable Energy LLC has helped more than 250 homeowners go solar last year. The benefits greatly outweighed their investment and clean energy is their foreseen future. What concerns me is the new program that is drastically reducing the RE credits produced by solar in favor of wind production. This sucks, because tax payers are going to be funding turbines that won't reduce their electric costs, just putting money into the corporate utilities pockets.

On behalf of my employees and current/future homeowners we work with, we DEMAND that legislation be put into place to prevent utility companies from obtaining these turbine subsidies without a clear path to reduction in utility bills. Our utility companies in this state will NOT be trusted. We do NOT support any legislation that will not directly benefit tax paying homeowners.

Sincerely,  
Dave Gabel
