---

The Governor's Energy Master Plan is currently inadequate to meet the climate emergency. It must include a moratorium on all new fossil fuel projects until greenhouse gas emissions are regulated. These new projects will increase our emissions by over 30%, cause greater health problems from air pollution, and further damage our waterways. We must aim for 100% clean renewable energy in electricity by 2035 and be fully decarbonized by 2050.

Thank you,
