Subject: [EXTERNAL] Energy master plan
Date: Monday, September 16, 2019 8:26:02 AM

I am writing to express my opinion about the energy master plan. As you are well aware, ALL scientists have predicted that we have less time than we thought (about a decade!!) to slow down the impact of climate change to avoid a cataclysmic disaster. We are already seeing destructive weather patterns caused by warming waters and rising sea levels. You are in a position to do something about this for the sake of your children, of your grandchildren! Carbon fuel AND fossil fuel are polluting our air and quickening the impact of climate change..In recent years we have seen an increase in respiratory diseases including asthma in children caused by unhealthy air. This is URGENT and we do not have time left to wait! Bold action is needed. Gov. Murphy promised to move toward 100% sustainable energy (wind power, solar) by 2050. I am very, very frightened for my grandchildren. I voted for Gov. Murphy because of his plan for 100% sustainability. The ONLY way to address this urgency and help save our planet is to issue a moratorium on ALL new fossil fuel development and begin the work toward making our state 100% fossil and carbon free. Please do the right thing and add this to the master plan. We MUST stop fracking and ALL new fossil fuel development...Do it for our children and grandchildren! Thank you!
