Governor Murphy and those of his Administration involved with creating the EMP:

Please make sure that the EMP includes a moratorium on all fossil fuel projects currently planned and under way in New Jersey. There should be no new pipelines added to our environment. Move forward with renewable energy projects now and ensure that the EMP reflects the need to stop all new fossil fuel energy projects and create clean energy jobs starting NOW. Governor Murphy promised that he would take New Jersey towards a clean energy future and that means starting now not allowing projects to continue on that have not been built yet.

- **Labor's buy-in is essential, practically and politically, to meet the EMP's goals.** This means including a realistic plan to ensure that the tens of thousands of new jobs in the green economy will be high quality jobs with workers having the right to organize. The EMP is completely silent on this issue.

- **The EMP admittedly lacks detailed plans and adequate public input** to accomplish its goals. It largely lacks any interim goals and milestones when there should be annual milestones for every goal in the report. While more details are expected in the final plan, this process prevents the public from having meaningful input and allows special interests to have undue influence. There must be a substantial opportunity for the public to have input on these details, especially the modeling results from the Integrated Energy Plan, in time to influence the final plan
