---

Greetings!

I am a college student who cares about protecting our ecosystems from climate change impacts.

I appreciate that Governor Phil Murphy's state Board of Public Utilities recently released its Draft Energy Master Plan dealing with many issues affecting climate change and green energy. My only concern is that the EMP does not address natural gas or any mention of a moratorium on fossil fuel projects. This means under the EMP, massive projects like the Meadowlands Power Plant can still be built. I kindly ask you to please not allow for natural gas project expansion.

Let's help our state get to 100% renewable and zero carbon! Long term, I believe that we must achieve a moratorium on all fossil-fuel projects. Our climate and our environment depend on it.

Thank you for your time and kind consideration!

Have a wonderful day,

Rebecca Canright
