Subject: [EXTERNAL] Comments on Energy Master Plan
Date: Monday, July 22, 2019 12:28:27 PM

New Jersey's Energy Master Plan should recommend placing a moratorium on new fossil fuel projects in the state.

The plan should call for regulation of greenhouse gases. If all of the proposed 8 pipelines, 6 power plants, and 1 LNG port are built, greenhouse gases in NJ will increase by 32 percent.

The plan should call for 100% renewable energy, not the current 50%.

There should be an environmental justice component to the plan, so that the poorest neighborhoods do not continue to bear the burden of the heaviest air pollution.
