The Governor's Energy Master Plan is currently inadequate to meet the climate emergency. It must include a moratorium on all new fossil fuel projects until greenhouse gas emissions are effectively regulated. These new projects will increase our emissions by over 30%! We must aim for 100% clean renewable energy in electricity by 2035 and be fully decarbonized by 2050. Furthermore, the plan needs to be more aggressive on using offshore wind power. While the current plans are good, we should have a goal of 3-4 times the current plan and speed up the implementation of the current plan.
