

ABOUT THINKECO

ThinkEco Inc. is a leading provider of energy efficiency solutions for homes and businesses through our patented Internet-of-Things technology platform. Since our founding in New York City, we've expanded our footprint across the United States and internationally. Our technology platform enables cloud-based applications powered by intelligent big-data algorithms, and features an API through which partners can integrate their devices and data into our customer engagement interface.

For utilities, we offer full-service, turnkey solutions that can be customized to meet their unique program management needs and engage their end-customers. Using our machine-to-machine cloud platform as the foundation, we're able to efficiently create hardware, software, and mobile solutions to meet the needs of each customer.

SOLUTIONS

For Utilities

Incorporate new energy loads into your programs and better manage existing technologies and programs with ThinkEco's turnkey offerings for residential and commercial customer engagement, demand response and energy efficiency.

Customize your program with services that include recruitment, marketing, program management, fulfillment operations, customer service, data analysis, measurement and verification, and reporting.

For Partners

Integrate with ThinkEco's technology platform and take advantage of our versatile M2M ecosystem. Leverage ThinkEco's expertise to adapt our hardware to your market or expand your footprint by joining our DR-ready network. Join our many technology and utility partners and innovate with us.

INTERNET OF THINGS

ThinkEco's flexible platform enables simple cloud-to-cloud integration, bringing data and control of a wide variety of third party devices into our universal User Dashboard. ThinkEco's platform seamlessly interfaces with partner technologies to create utility program offerings.

We also offer a RESTful API for integration of the modlet and smartAC with third party systems. Our partners can control ThinkEco hardware and create new insights using the technology's granular data for powerful home and office automation.

PRODUCT OFFERINGS

Hardware

ThinkEco's modlet records minute-level power use and provides socket-level control for any plug load. Our smartAC provides additional temperature measurement and control. These devices provide a retrofit solution for utilities to curtail any residential or commercial plug load from 110V-220V and 15-20A.

Web & Mobile Apps

Our iPhone and Android apps allow users to conveniently view and control their devices. Users are able to turn devices on and off, adjust the A/C temperature, and track energy savings from anywhere.

Program Management Dashboard

View all of your program's inner workings from marketing to demand response performance with the new Program Management Dashboard. Track your program pipeline and quickly visualize your program's impact.

Outage Reporting

Aggregate any type of connected device to add to your network of sensors for outage and restoration management. Our app also provides utilities with a new communication channel during and after outages, and gives users an easy way to keep in touch with their homes or businesses during outage events.

Research & Development

ThinkEco's custom R&D projects, such as the 3G Gateway with Verizon, range from cloud-to-cloud integration of third party devices to new hardware development.
