Subject: [EXTERNAL] New Jersey 2019 EMP comments - Sustainable and Resilient Infrastructure - Georgetown Climate Center submission
Date: Friday, October 12, 2018 4:54:47 PM

Dear Ms. Holland,

Georgetown Climate Center is a non-partisan, non-profit institute that seeks to advance effective climate and energy policies in the United States and serves as a resource to state and local communities that are working to cut carbon pollution and prepare for climate change.

Georgetown Climate Center would like to submit the following to the NJ Energy Master plan stakeholder process for Sustainable and Resilient Infrastructure:

Georgetown Climate Center's Adaptation Clearinghouse is an online database and networking site that serves policymakers and others who are working to help communities adapt to climate change. The Adaptation Clearinghouse Energy sector portal includes resources to help policymakers understand, plan, and prepare for impacts of climate change to the energy sector, ranging from changes in energy demand to preparing for threats to energy infrastructure. The clearinghouse portal and resources are available at the following link: <http://www.adaptationclearinghouse.org/sectors/energy/>

Regards,
Matthew Goetz
