

New Jersey Department of Health and Senior Services
Communicable Disease Service
Influenza Activity Summary
Week Ending November 28, 2009(MMWR Week 47)

Influenza Activity Level: **WIDESPREAD**

NOTE: Two of three parameters are at or above state baseline. Ten counties have 2 of 3 parameters above state baseline and 20 counties have had culture/PCR positive samples in the last 3 weeks. Ten counties had both positive culture/PCR and 2 of 3 parameters above baseline.

No Activity- At least 2 of 3 parameters at or below state baseline **AND** no lab confirmed cases

Sporadic – At least 2 of 3 parameters above state baseline **AND** confirmed laboratory cases anywhere in the state within previous 3 weeks **OR** at least one laboratory confirmed outbreak in an institution anywhere in the state

Local – At least 2 of 3 parameters above state baseline in a single county **AND** confirmed laboratory cases from that same county within the previous 3 weeks (other counties may be above baseline without lab confirmed cases) **OR** confirmed outbreaks in 2 or more institutions in a single county

Regional – At least 2 of 3 parameters above state baseline in ≥ 2 but ≤ 10 counties **AND** laboratory confirmed cases from these same counties in the past 3 weeks **OR** confirmed outbreaks institutions in ≥ 2 but ≤ 10 counties

Widespread – At least 2 of 3 parameters above state baseline in > 10 counties **OR** institutional outbreaks in > 10 counties **AND** lab confirmed influenza cases in previous 3 weeks.

Parameter = School, emergency department, or long term care weekly surveillance data

Off season baseline is calculated by taking the average of statewide percentages of ILI for a 4 year (2006, 2007, 2008, 2009) period during months when influenza is less likely to be circulating (May-August).

Regional Data

Region	Counties in Region	Activity Level
NW Region	Morris, Passaic, Sussex, Warren	REGIONAL
NE Region	Bergen, Essex, Hudson	REGIONAL
CW Region	Hunterdon, Mercer, Somerset	REGIONAL
CE Region	Middlesex, Monmouth, Ocean, Union	REGIONAL
South Region	Atlantic, Burlington, Camden, Cape May, Salem, Cumberland, Gloucester	REGIONAL

No Activity- At least 2 of 3 parameters at or below state baseline **AND** no lab confirmed cases in the public health region

Sporadic – At least 2 of 3 parameters above state baseline **AND** confirmed laboratory cases anywhere in the public health region **OR** at least one laboratory confirmed outbreak in an institution anywhere in the public health region

Local – At least 2 of 3 parameters above state baseline in a single county of a public health region **AND** confirmed laboratory cases from that same county within the previous 3 weeks (other counties may be above baseline without lab confirmed cases) **OR** confirmed outbreaks in 2 or more institutions in a single county of a public health region

Regional – At least 2 of 3 parameters above state baseline in at least half of the counties of public health region **AND** laboratory confirmed cases from these same counties in the past 3 weeks **OR** confirmed outbreaks institutions in at least half of counties of public health region counties

Widespread – Not used for public health region data

Influenza Hospitalizations/Deaths

Influenza-associated hospitalizations are reported weekly from a subset of hospital facilities. Facilities report patients hospitalized with either laboratory-confirmed (rapid, PCR, culture) influenza or patients admitted with influenza-like illness. Data from influenza-associated deaths are extracted from CDRSS. Only deaths associated with laboratory-confirmed influenza are included in these statistics.

NJ Influenza-Associated Hospitalizations and Deaths by Current MMWR week and Cumulative Total (Week 36 to present)		
	Hospitalizations	Deaths
Week 47	35	2
Cumulative	473	13

Syndromic Surveillance – Enhanced Emergency Department (ED) Surveillance for Influenza-like Illness (ILI)

NOTE: *The number of ED visits, hospital admissions, ED visits due to ILI, and hospital admissions due to ILI are reported each day by acute care facilities statewide. These data are captured via daily surveys sent using the Hippocrates system.*

Summary of Emergency Department (ED) Visits and Admits Surveillance

Daily surveillance for ED visits and admissions from these hospital EDs resulted in three ED volume blips (Hunterdon, Mercer and Ocean) and one admission blip (Camden) from 11/22/09 to 11/28/09. One blip response was received and it was not associated with ILI activity.

Summary of Enhanced Emergency Department (ED) Surveillance for Influenza-like Illness (ILI)

During 11/22/09-11/28/09, 80 acute care facilities in NJ reported an aggregate total of 3,940 ED visits due to ILI (7.4% of total ED visits) and an aggregate total of 260 admissions due to ILI (6.6% of total ILI ED visits). These reports resulted in two ED ILI visit blips (Ocean and Warren). There was a decrease in ILI activity for the week ending 11/28/09 when compared to the previous week ending 11/21/09 ($p = 0.0063$). The mean percentage of ED visits for ILI during the week ending 11/28/09 was 7.3%, compared to 8.6% for the previous week. The mean percentage of ED visits due to ILI ranged from 6.5% to 9% during 11/22/09 – 11/28/09. The mean percentage of ED visits due to ILI (averaged over the previous four influenza seasons) for this same week (MMWR Week 47) was approximately 4%.

Laboratory Surveillance

As of week 47, 320 samples were found to be positive by viral culture or PCR for influenza AH1, AH3, novel AH1N1 or influenza B. Please see graph on next page for weekly distribution. Numbers of specimens tested and total number positive by rapid influenza testing are displayed by county at the end of this report.

*Rapid influenza test data is acquired from facilities reporting rapid influenza tests via NREVSS or CDRSS ILI module. Culture/PCR results are obtained from the LIMS system at PHEL or hospital viral culture laboratories via NREVSS. County of residence as provided by the laboratory is used to assign culture results to a county. If county of residence is not available, the county of the facility reporting is utilized.

Influenza-like Illness (ILI) Surveillance*

Long-term Care Facilities

During week 47, 0.78% ILI was reported statewide from long term care facilities. This is an increase compared to the previous week (0.51%). The percent ILI for each county ranged from 0.00% to 1.86%. The percent ILI for this same week last year was 0.67% in long-term care facilities. The percent ILI for the northwest (0.81%) and northeast (1.48%) public health regions were above the state baseline (0.69%). No new reports of respiratory outbreaks in institutional settings were received during week 47.

Influenza-like Activity - Long Term Care Facilities

School Absenteeism

During week 47, schools reported 5.69% absenteeism. This is an increase compared to the previous week (4.83%). The percent absenteeism for each county ranged from 3.76 to 8.81%. The percent absent for this same week last year was 4.14%. The percent ILI for the northwest (6.88%) and south (5.73) public health regions were found to be at or above the state baseline (5.73%).

Emergency Departments

NOTE: Data presented below is from daily ED data extracted from Hippocrates survey responses for Tuesday of each week. Because this data only represents one day of data, it is likely less accurate for detecting true trends than the syndromic data presented above.

During week 47, 6.74% of ILI was reported statewide from emergency departments. This is a decrease compared to the previous week (8.09%). The percent ILI for each county ranged from 2.23 to 14.02%. The percent ILI for this same week last year was 3.13% in emergency departments. The percent ILI for the northwest (8.10%), northeast (5.67%), central west (5.74%), central east (9.72%) and south (3.63%) public health regions were found to be above the state baseline (3.04%).

Influenza-like Activity - Emergency Departments

Sentinel Provider Surveillance

During week 47, 5.76% of sentinel provider patient visits were due to ILI. These data reflect reports from sixteen (23%) of the 70 enrolled sentinel providers.

During week 46, 7.09% of sentinel provider patient visits were due to ILI. These data reflect reports from twenty-nine (41%) of the 70 enrolled sentinel providers.

Pediatric Influenza Surveillance

To date, NJDHSS has received 48 reports of pediatric influenza meeting the case definition.

122 City Mortality Report

During week 46, 4.26% of all deaths reported by the vital statistics offices in 6 New Jersey cities (i.e., Camden, Elizabeth, Jersey City, Newark, Paterson, Trenton) were due to pneumonia or influenza. This is an increase compared to the previous week (2.65%). The percentage of death due to pneumonia or influenza for this same week last year was 6.94%.

RSV Reports

During week 46, 27.72% of all RSV samples tested were positive. This is an increase over the previous week 22.00%. The percent of samples positive for RSV for this same week last year was 19.90%.

Additional Information

For additional information regarding influenza surveillance please visit the following websites.

<http://nj.gov/health/flu/surveillance.shtml>

<http://www.cdc.gov/flu/>

* Off Season baseline is calculated by taking the average of statewide percentages of ILI for a 3 year (2006, 2007, 2008, 2009) period during months when influenza is less likely to be circulating (May-August).

**Four year average is an average of the 2005-2006, 2006-2007, 2007-2008, 2008-2009 influenza seasons.
