- Hepatitis Helpline Call Center: 33

This guide provides a list of sites that offer free or low-cost vaccination, testing and treatment for hepatitis A, hepatitis B and hepatitis C in New Jersey as well as treatment resources and education & advocacy resources. Please note that some of the vaccination and screening sites have limitations of who may use their services. You are encouraged to call a testing/screening site to confirm that this information is still current.

Glossary of Acronyms and Terms Used in This Guide

HAV: Hepatitis A virus

HBV: Hepatitis B virus

HCV: Hepatitis C virus

Gastroenterology: The study and treatment of the digestive system and its disorders.

Hepatology: The study and treatment of diseases of the liver; usually considered a sub-specialty.

High risk individuals: Persons at higher risk for contracting viral hepatitis due to various risk factors, such as: sexual contact with a hepatitis infected person, multiple sexual partners, birth from a hepatitis infected mother, living with a sexually transmitted disease, current or past drug injection use, occupational exposure to blood and long-term hemodialysis, receipt of blood or organs prior to July 1992 and receipt of clotting factor concentrate before 1987.

Infectious disease (ID): The study and treatment of communicable diseases, such as hepatitis.

STD: sexually transmitted disease (also known as STI, sexually transmitted infection). An infection transmitted through sexual contact.

Hepatitis Vaccination, Testing and Treatment in New Jersey

Hepatitis A, hepatitis B, and hepatitis C are liver infections caused by three different viruses. Although each can cause similar symptoms, they are spread in different ways and can affect the liver differently. Hepatitis A is usually a short-term infection and does not become chronic. Hepatitis B and hepatitis C can also begin as short-term, acute infections, but in some people, the virus remains in the body, resulting in chronic disease and long-term liver problems. There are vaccines to prevent hepatitis A and hepatitis B; however, there is no vaccine for hepatitis C.

Hepatitis A is a highly contagious, short-term liver infection caused by the hepatitis A virus. People who get hepatitis A may feel sick for a few weeks to several months but usually recover completely and do not have lasting liver damage. In rare cases, hepatitis A can cause liver failure and even death; this is more common in older people and in people with other serious health issues, such as chronic liver disease. Since the hepatitis A vaccine was first recommended in 1996, cases of hepatitis A in the United States declined dramatically. Unfortunately, in recent years the number of people infected has been increasing because there have been multiple outbreaks of hepatitis A in the United States resulting from person-to-person contact, especially among people who use drugs, people experiencing homelessness, and men who have sex with men.

The Centers for Disease Control and Prevention (CDC) now recommends one time hepatitis C testing for all adults over the age of 18, all pregnant women, and more frequent testing for

certain groups that are at risk for acquiring hepatitis C. A cure now exists for hepatitis C and people should not be afraid to get tested. NJDOH encourages healthcare providers to include hepatitis C testing in their plan of care. Likewise, patients should talk with their health care provider about getting tested. Getting a simple blood test is the only way to know if you have the hepatitis C virus, as many people do not have/show any symptoms. For more information: <https://www.cdc.gov/knowmorehepatitis/index.htm>

The CDC also recommends testing for hepatitis B for Asian Americans and Pacific Islanders (AAPIs). Hepatitis B is common worldwide, especially in many parts of Asia and the Pacific Islands. Research shows that 1 in 12 AAPIs has hepatitis B. Health care providers are encouraged to talk with and test their AAPI patients for hepatitis B. And patients are encouraged to talk with their health care provider about being tested for hepatitis B. Hepatitis B may have no symptoms but is the leading cause of liver disease. Getting a simple blood test is the only way to know if you have the hepatitis B virus. For more information: <https://www.cdc.gov/knowhepatitisB/>

Free or Low-Cost Hepatitis Vaccination, Testing and Treatment in New Jersey

See the list below for HAV and HBV vaccination and HBV and HCV testing and treatment at publicly funded non-profit organizations and clinics. This list does not include private physician offices. This resource will be updated to reflect additional public testing and treatment sites, as needed.

Hours may change without notice. Please call ahead to confirm hours before arrival. Some of the facilities listed offer services to existing clients only. Individuals may wish to contact the facility and ask if they are accepting new patients. The information for free/low-cost vaccination, testing and treatment has been provided to the New Jersey Department of Health by a variety of sources, including self-report by the organization. This list is provided for informational purposes only.

Addition prevention, testing and treatment information can be found at the CDC National Prevention Information Network

<https://npin.cdc.gov/search/organization/testing/viral%20hepatitis>

Commercial Pharmacies and Vaccination

Commercial pharmacies, such as CVS, Rite-Aid and Walgreens offer hepatitis A and B vaccination at many of their locations. According to their websites, they offer both pediatric/child and adult doses. Call the pharmacy of the location you plan to visit to confirm prices and availability

CVS: www.minuteclinic.com/services/vaccination

Walgreens: www.walgreens.com/topic/pharmacy/healthcare-clinic

Rite-Aid: www.riteaid.com/pharmacy

Clinical/Treatment Resources

The websites below may assist in locating providers who treat persons with viral hepatitis infection. These websites offer “physician locator” and/or other patient resources that you may find helpful.

American College of Gastroenterology <https://gi.org/>

American Gastroenterology Association <https://gastro.org/>

American Association for the Study of Liver Diseases <https://www.aasld.org/>

Infectious Disease Society of NJ www.idsnj.org

New Jersey Medical Society <https://msnj.org/>

A patient assistance program, Partnership for Prescription Assistance, is another resource for those who are uninsured or underinsured to receive financial assistance paying for medications. www.pparx.org. Some pharmaceutical companies also provide patient assistance with certain prescription drugs; the amount of assistance provided varies. Contact the company that makes the medication you are taking for more information.

***Note:** for those who are HIV positive, hepatitis A and B vaccinations and hepatitis C testing and treatment are covered under the AIDS Drug Distribution Program. For more information about this program contact the New Jersey AIDS/STD Hotline at 1-800-624-2377 or <https://adap.directory/new-jersey>

Clinical Trials

Individuals who are looking for free/low-cost treatment options may want to consider participating in clinical trials. New Jersey has multiple hepatitis clinical trials at various locations throughout the state. For more information, go to: <https://clinicaltrials.gov/ct2/search> ClinicalTrials.gov is a registry and results database of publicly and privately supported clinical studies of human participants conducted around the world.

The Treatment Action Group (TAG) is an independent research and advocacy group for HIV and hepatitis. More information can be found at: <https://www.treatmentactiongroup.org/cure/trials/>

Laboratory Definitions

If you believe that you have hepatitis, you are encouraged to get tested. A blood test is the only way to know if you have the hepatitis virus. Testing will determine if you have the virus in your blood. Once tests are run, the healthcare provider will discuss the results with you. If you are “screened” for hepatitis and the results are positive, it is recommended that you have a “confirmatory” test.

Below are some common terms that your healthcare provider may use when discussing your test results. The ranges provided for the tests are for adults.

WBC: “White Blood Cell Count” - Normal Range (4.5-11 x 10⁹ per µL)

White Blood Cells are cells that fight infection and can cause inflammation. This number can be elevated or decreased in a new infection. It may present low in infections harming the immune system such as HIV.

ANC: “Absolute Neutrophil Count” - Normal Range (>500 cells)

The ANC is a number representing the specific number of neutrophils within the white blood cell count (WBC). Neutrophils are the main infection fighting cell in a new infection. In situations where the total WBC is low, the ANC indicates the body's ability to fight an acute infection.

Hg: “Hemoglobin” - Normal Range (Male- 13.5-17.5g/dL / Female- 12-16 g/dL)
Hemoglobin is a protein component of red blood cells that uses iron to carry oxygen. When hemoglobin is low, this is called “Anemia.”

Hct: “Hematocrit”- Normal Range (Male- 39-49% / Female - 35-45%)
Hematocrit represents how much blood volume is made up of red blood cells (RBC). If elevated, this indicates an increased production of red blood cells or a decreased amount of fluid without a change in red blood cells such as in dehydration. If lower, this indicates a decrease in red blood cell production.

PLT: “Platelet” - Normal Range (150-450 x 10³ per µL)
Platelets are necessary to form clots in the body. Low platelets can indicate a tendency for bleeding. A low platelet count is called “thrombocytopenia,” this may be seen in HIV, Hepatitis C, or blood disorders.

BUN: “Blood Urea Nitrogen” - Normal Range (7-18 mg/dL)
Blood Urea Nitrogen is a break down product of normal human metabolism. It is excreted by the kidney. If elevated, it can indicate non-specific status changes including changes to blood volume or kidney function.

Cr: “Creatinine” - Normal Range (0.6 – 1.2 mg/dL)
Creatinine is a break down product of normal human metabolism. It is excreted by the kidney. If elevated, this number indicates damage to the kidney itself.

Albumin – Normal Range (3.5 – 5.5 g/dL)
Albumin is a protein made in the liver and found in the blood. It is an indicator of liver function.

AST: “Aspartate Aminotransferase” - Normal Range (7-40 U/L)
AST is a marker used to indicate damage to the liver cells. It is compared with ALT.

ALT: “Alanine Aminotransferase” - Normal Range (7-40 U/L)
ALT is a marker used to indicate damage to the Liver. It is compared with AST.

Bilirubin: Normal Range (.2-1.0 mg/dL)
Bilirubin is a breakdown product of red blood cells. It is also an indicator of liver function.

HCV Viral Load: “Hepatitis C Viral Load” - Normal Range (Not detected)
Hepatitis C Viral Load being elevated indicates an active infection because the viral load is a measurement of the presence of the virus in the bloodstream.

HIV Viral Load: “Human Immunodeficiency Virus Viral Load”- (Not detected)
HIV Viral load indicates the current state of the infection.

TSH: “Thyroid Stimulating Hormone”- Normal Range (<10 µU/L, >60yo Men 2-7.3 / Women 2-16.8)

TSH is a marker of thyroid function.

AFP: “Alpha-Fetoprotein”

AFP is a non-specific marker that may indicate liver cancer.

INR: “International Normalized Ratio”

A measurement of bleeding time, which is an indication of liver function.

Federally Qualified Health Centers/Community Health Centers

New Jersey has many federally qualified health centers (FQHC) across the state. FQHCs provide comprehensive community-based primary health care to individuals who have health insurance, who are uninsured and underinsured. All FQHCs are staffed with Board-certified or Board-eligible physicians representing a broad array of medical specialties and are subject to stringent Federal regulations in all operational areas. Most FQHCs are located in high-density, urban areas and in rural areas with a large, diverse base of ethnic and minority residents. The comprehensive services of each center are tailored to the physical, psychosocial, nutritional, and health educational needs of their communities.

Link to a listing of FQHCs in New Jersey:

<https://healthapps.state.nj.us/fhs/cphc/cphcSearch.aspx>

Addiction Resources

The New Jersey Division of Mental Health and Addiction Services (DMHAS) exists to promote the prevention and treatment of substance abuse and support the recovery of individuals affected by the chronic disease of addiction. The DMHAS has a comprehensive directory of substance abuse treatment facilities by county in New Jersey. The directory includes information about the type of organization (non-profit, profit), specialized services/populations (men, women, post-partum women, DWI/DUI, etc.), type of care (out-patient, in-patient residential, hospital inpatient detox, etc.), language services and participating initiative networks.

Visit the NJ DMHAS website at: <http://nj.gov/health/integratedhealth>

The federal government’s Substance Abuse and Mental Health Services Administration (SAMHSA) is another resource to consider. SAMHSA’s mission is to reduce the impact of substance abuse and mental illness on America’s communities.

The Agency was established in 1992 and directed by Congress to target effectively substance abuse and mental health services to the people most in need and to translate research in these areas more effectively and more rapidly into the general health care system.

The SAMHSA website offers a treatment facility locator for the entire country. View the SAMHSA treatment locator at: <http://findtreatment.samhsa.gov>

HIV Testing

There are various agencies across the state that offer rapid HIV testing. Rapid HIV testing is available throughout New Jersey at publicly funded HIV counseling and testing sites. Most of these sites offer rapid HIV counseling and testing free of charge. For more information about HIV testing in your county, visit the link: <http://www.nj.gov/health/hivstdtb/hiv-aids/getting-tested/>

Harm Reduction Centers

People who inject drugs (PWID) most often contract HIV, HBV and HCV by sharing contaminated needles and other drug injection paraphernalia with infected individuals. Stopping the spread of injection-related diseases through cost-effective prevention programs is therefore the goal. Harm Reduction Centers (HRC) which include drug treatment and behavioral interventions are one model proven to significantly prevent/reduce the transmission of these diseases.

As most people become infected with HCV and other bloodborne pathogens within their first year of using injection drugs, each of the seven HRCs collaborates with a variety of health care facilities and programs through linkages to provide supportive services, such as substance abuse treatment. For the most current information about New Jersey's Harm Reduction Centers visit <https://www.nj.gov/health/hivstdtb/sap.shtml>

ASBURY PARK

Visiting Nurse Association of Central New Jersey
Prevention Resource Network (Project REAL)
816 Sunset Ave
Asbury Park, NJ 07712

Hours: Wednesday 12pm-3pm

PATERSON

Hyacinth AIDS Foundation -Paterson (Mobile Site)
Montgomery Street (between Straight St. & River St.)
Monday, Tuesday, Thursday: 10:00 AM to 2:00 PM
Walgreen's on East 18th St. (near Ellison St. & Madison Av.), Paterson, NJ Monday- Friday:
10:00 AM to 2:00 PM

Most of the HRCs have an **ARCH** (Access to Reproductive Care and HIV Services) Program. Contact the ARCH program at the HRC to verify the hours and services provided.

The ARCH programs offer the following services:

- Pregnancy Tests and Referrals for Prenatal Care
- Referrals for Urban Treatment-Methadone
- Screening and Treatment for STDs
- Screening for Hepatitis B and Hepatitis C
- Vaccines (HAV/HBV, HPV, Tetanus and Influenza)
- HIV Counseling and Testing
- Harm Reduction Education and Condom Distribution

New Jersey AIDS / STD Hotline: 1 (800) 624-2377

The HIV/STD Hotline has information on each syringe access program and can facilitate an immediate linkage to HIV care for anyone testing HIV positive. The HIV/STD Hotline is available 24 hours a day, seven days per week. Individuals may also text/email 8006242377@njpies.org or chat with a health professional at www.njhivstdline.org

Support Groups

If there is not a support group in your area or you are unable to attend an in-person group, there are numerous online support groups that use technology to provide education and support. The American Liver Foundation's Support Community offers online support to individuals with hepatitis, their families, friends and caregivers.

<http://www.inspire.com/groups/american-liver-foundation/>

Additionally, if you are interested in forming a support group and would like information about how to start a group and/or become a leader of a support group, the Hepatitis C Support Project offers useful resources on their website: <https://npin.cdc.gov/publisher/hepatitis-c-support-project-hcv-advocate> as does the Hepatitis C Mentor and Support Group website:

www.hepatitiscmsg.org

Hepatitis Helpline Call Center

The Hepatitis Help Line Call Center at Hep C Connection, located in Denver, Colorado, operates Monday – Friday, 7:00 a.m. – 5:00 p.m. (MST) is run by a non-profit hepatitis organization, Hep C Connection (hepC-Connection.org). Operators are trained phone counselors and are hepatitis C-challenged individuals, themselves, or are caregivers for hepatitis C-challenged family members. They combine personal experience with ongoing research and training to provide confidential, practical help and up-to-date information about living with the virus. Frequently, that includes educating callers about hepatitis A and B, and addressing co-infection (HCV/HIV) issues, as well. Bilingual operators are available. 1-800-522-HEPC

This publication is coordinated by the NJDOH Communicable Disease Service.

Questions? Call the NJ Viral Hepatitis Prevention Coordinator at 609-826-5964
