Rutgers University-New Brunswick, 2019
Outbreak Response:
Evaluation of high-risk persons for MenB vaccination

Does the person have documentation of receiving MenB vaccine?

Yes

Did the person complete a primary series with:

- Bexsero® – 2 Dose
- OR
- Trumenba® – 3 Dose
- OR
- Trumenba® – 2 Dose

No or Unknown

Administer:

- Bexsero® – 2 Dose
- OR
- Trumenba® – 3 Dose

Did the person complete a primary series with:

Yes

Was most recent dose received ≥1 year from today’s date?

Yes

Administer booster dose (using the same MenB vaccine product used to complete primary series)

No

No further doses needed at this time. Schedule booster dose for ≥1 year from date of most recent dose.

No or Unknown

Complete primary series as follows:
(Administering the same MenB vaccine product previously administered)

Bexsero®
If ≥1 month since Dose 1 (no maximum interval) - administer Dose 2

OR

Trumenba®
If only Dose 1 received:
- If ≥6 months after Dose 1 (no maximum interval) - administer Dose 2 as final dose of primary series
- If ≥1 month and < 6 months after Dose 1 – administer Dose 2 and schedule Dose 3 with minimum interval of 4 months between Dose 2 & 3

If Dose 1 & Dose 2 received:
- If Dose 1 & 2 are ≥1 month AND < 6 months apart – administer Dose 3 as final dose primary series, ensuring that Dose 3 is administered ≥4 months from Dose 2
- NOTE: If Dose 1 & 2 are administered ≥6 months apart, primary series is considered complete (evaluate individual for booster dose)
