New Jersey Department of Health
Surveillance Criteria and Testing for Middle East Respiratory Syndrome (MERS)

Protocol for Healthcare Providers and Local Health Departments
August 7, 2018

Key steps in case screening for Middle East Respiratory Syndrome (MERS)

1. Confirm that the case meets current SURVEILLANCE CRITERIA
2. Ensure implementation of CONTROL MEASURES
3. Ensure COLLECTION OF SPECIMENS for diagnostic testing
4. Ensure NOTIFICATION procedures are followed
5. Ensure completion of the MERS PERSON UNDER INVESTIGATION FORM

SURVEILLANCE CRITERIA

Healthcare Providers

To rapidly detect the importation of MERS and the virus that causes it (MERS-CoV), NJDOH requests health care providers to report patients meeting one of the following criteria.

1. A patient with fever¹ AND pneumonia or acute respiratory distress syndrome (based on clinical or radiologic evidence) AND one or more of the following:
   a. History of travel from countries in or near the Arabian Peninsula² within 14 days before symptom onset OR
   b. Close contact³ with a symptomatic traveler who developed fever¹ and acute respiratory illness (not necessarily pneumonia) within 14 days after traveling from countries in or near the Arabian Peninsula² OR
   c. A member of a cluster of patients with severe acute respiratory illness (e.g., fever¹ and pneumonia requiring hospitalization) of unknown etiology in which MERS-CoV is being evaluated by state or local health officials
2. A patient with fever¹ AND symptoms of respiratory illness (not necessarily pneumonia; e.g., cough, shortness of breath) AND history of being in a healthcare facility (as a patient, worker, or visitor) within 14 days before symptom onset in a country in or near the Arabian Peninsula² in which recent healthcare associate cases of MERS have been identified, OR
3. Fever¹ OR symptoms of respiratory illness (not necessarily pneumonia; e.g., cough, shortness of breath) AND close contact³ with a confirmed MERS case while the case was ill.

¹. Fever (≥100.4°F) may not be present in some patients, such as those who are very young, elderly, immunosuppressed, or taking certain medications. Clinical judgement should be used to guide testing of patients in such situations.
². Countries considered in the Arabian Peninsula and neighboring include: Bahrain; Iraq; Iran; Israel, the West Bank, and Gaza; Jordan; Kuwait; Lebanon; Oman; Qatar; Saudi Arabia; Syria; the United Arab Emirates; and Yemen.
³. Close contact is defined as: a) being within approximately 6 feet (2 meters) or within the room or care area for a prolonged period of time (e.g., healthcare personnel, household members) while not wearing recommended personal protective equipment (i.e., gowns, gloves, respirator, eye protection—see http://www.cdc.gov/coronavirus/mers/infection-prevention-control.html); or b) having direct contact with infectious secretions (e.g., being coughed on) while not wearing recommended personal protective equipment (i.e., gowns, gloves, respirator, eye protection—see http://www.cdc.gov/coronavirus/mers/infection-prevention-control.html). Data to inform the definition of close contact are limited. At this time, brief interactions, such as walking by a person, are considered low risk and do not constitute close contact.
INFECTION CONTROL

- Health care entities should put in place measures to detect suspect cases early (e.g., signage, triage assessments) and isolate all suspect cases immediately upon suspicion.

- **Standard, contact, and airborne precautions** are recommended for management of hospitalized patients with known or suspected MERS-CoV infection. Key infection control steps are outlined below. Additional information available at [http://www.cdc.gov/coronavirus/mers/infection-prevention-control.html](http://www.cdc.gov/coronavirus/mers/infection-prevention-control.html)
  - **Hand Washing:** Healthcare providers should perform hand hygiene before and after all patient contact. Alcohol-based hand sanitizers can be used unless hands are visibly soiled in which case, soap and water should be used.
  - **Personal Protective Equipment (PPE):** Gloves, gowns, eye protection, and respiratory protection should be used when a case of MERS is suspected. Use respiratory protection that is at least as protective as a fit-tested NIOSH-certified disposable N95 filtering facepiece respirator upon entry to the patient room or care area.
  - **Patient Placement:** Patients with suspected MERS infection should be placed in an Airborne Infection Isolation Room (AIIR) immediately upon identification. If an AIIR room is not available, the patient should be transferred as soon as is feasible to a facility where an AIIR is available. Pending transfer, place a facemask on the patient and isolate him/her in an examination room with the door closed. The patient should not be placed in any room where room exhaust is recirculated without high-efficiency particulate air (HEPA) filtration.
  - **Aerosol-Generating Procedures:** Aerosol-generating procedures (e.g., cough-generating procedures, bronchoscopy, sputum induction, intubation and extubation cardiopulmonary resuscitation, and open suctioning of airways) can cause higher concentrations of infectious respiratory aerosols and for this reason, these procedures should only be performed if medically necessary. If the procedures must be performed, health care providers present for the procedure should be limited, appropriate PPE should be worn, and the procedures should be conducted in an AIIR.
  - **Duration:** At this time, information is lacking to definitively determine a recommended duration for keeping patients in isolation precautions. Duration of precautions should be determined on a case-by-case basis, in conjunction with local, state, and federal health authorities. Factors that should be considered include the presence of symptoms related to MERS-CoV, date symptoms resolved, other conditions that would require specific precautions (e.g., tuberculosis, *Clostridium difficile*) and available laboratory information.

- People who are confirmed to have, or being evaluated for, MERS-CoV infection and do not require hospitalization for medical reasons may be cared for and isolated in a residential setting after a healthcare professional and public health official determines that the setting is suitable. Providers should consult with both NJDOH and their local health department to discuss home isolation, home quarantine, or other measures for close contacts and for patients who are being evaluated for MERS or who have tested positive. Additional guidance on this topic can be found at [http://www.cdc.gov/coronavirus/mers/hcp/home-care.html](http://www.cdc.gov/coronavirus/mers/hcp/home-care.html)

- These recommendations will be updated as additional information on MERS, its transmissibility, epidemiology, available treatment, or vaccine options become available. These interim recommendations are based upon currently available information.
COLLECTION AND TRANSPORT OF CLINICAL SPECIMENS

The New Jersey Public Health and Environmental Laboratories (PHEL) has the capability to test for Middle East Respiratory Syndrome Coronavirus (MERS-CoV) using CDC's rRT-PCR assay. Approval for testing will be granted only after clinical and epidemiologic criteria of the suspect case is reviewed by the local and state health departments.

CDC currently recommends the collection of specimens from three different sources for each suspect case. Collection of one lower respiratory tract specimens (i.e., bronchoalveolar lavage, tracheal aspirate, pleural fluid, sputum), one upper respiratory tract specimen (nasopharyngeal and oropharyngeal (NP/OP)), and one serum sample are strongly recommended. **Ideally, all three specimen types should be collected on all suspected MERS patients.** It is advisable for respiratory specimens to be collected as soon as possible after symptoms begin – ideally within 7 days of symptom onset. However, if more than a week has passed since symptom onset and the patient is still symptomatic, respiratory samples should still be collected, especially lower respiratory specimens since respiratory viruses can still be detected by rRT-PCR. If preliminary results at PHEL are positive or inconclusive, specimens will be sent to CDC for additional testing and/or confirmation.

Additional information on specimen collection, handling and testing is available at: [http://www.cdc.gov/coronavirus/mers/guidelines-clinical-specimens.html](http://www.cdc.gov/coronavirus/mers/guidelines-clinical-specimens.html)

Appropriate infection control procedures should be followed when collecting samples and can be found at: [http://www.cdc.gov/coronavirus/mers/infection-prevention-control.html](http://www.cdc.gov/coronavirus/mers/infection-prevention-control.html)

The SRD-1 form (available at [http://www.state.nj.us/health/forms/srd-1.dot](http://www.state.nj.us/health/forms/srd-1.dot)) should be completely filled out for **each** specimen that is sent. Label the **vial containing the specimen** with patient’s first and last name, date of birth, medical record number, date of collection, and specimen type. Incorrectly labeled samples may be denied for testing. Additionally, laboratories may be asked to complete a CDC 50.34 form for specimens that will be transported to CDC. This form is available at: [https://www.cdc.gov/laboratory/specimen-submission/pdf/form-50-34.pdf](https://www.cdc.gov/laboratory/specimen-submission/pdf/form-50-34.pdf). Laboratories should be prepared to complete and electronically email this document in an encrypted fashion to NJDOH if requested.

The timeframe in which testing is conducted by PHEL or CDC will be determined on a case-by-case basis. **No specimen will be tested by PHEL until the case has been reviewed and approved by the CDS staff.**

NOTE: If PHEL receives a specimen without CDS review and approval, PHEL will hold the specimen and contact CDS.

Shipping

CDS staff will carefully evaluate each report to determine the immediacy in which the specimen should be transported and tested. Samples may be shipped to PHEL via commercial carrier, private courier or hand carried. If CDS staff feels that immediate testing of the sample is warranted, the local health department and the hospital will be asked to assist in transporting specimens to PHEL. In most cases, CDS will ask the facility or LHD to hand carry specimens to PHEL on the same day the specimen was approved for testing. Directions to PHEL can be found at
If CDS determines the case to be a low priority, commercial carriers can be used to ship samples, which should be handled as Biologic Substance, Category B. When shipping via commercial carrier you must abide by IATA shipping regulations which can be found at [www.iata.org](http://www.iata.org) or [http://www.fmcsa.dot.gov/regulations/hazardous-materials](http://www.fmcsa.dot.gov/regulations/hazardous-materials). Specific specimen storage instructions can be found in the following document on the CDC website: [http://www.cdc.gov/coronavirus/mers/guidelines-clinical-specimens.html](http://www.cdc.gov/coronavirus/mers/guidelines-clinical-specimens.html)

**NOTIFICATION**

**Healthcare Providers**

Cases meeting the above surveillance criteria should be reported **IMMEDIATELY** to the local health department (LHD) where the patient resides. If the patient residence is unknown, report to your own local health department. Local health departments are available 24/7/365. Contact information for local health departments during business hours can be found at [www.localhealth.nj.gov](http://www.localhealth.nj.gov). Contact information for local health departments after business hours or on weekends can be found at [http://nj.gov/health/lh/documents/lhd_after_hours_emerg_contact_numbers.pdf](http://nj.gov/health/lh/documents/lhd_after_hours_emerg_contact_numbers.pdf).

If LHD personnel are unavailable, healthcare providers should report the case to the New Jersey Department of Health (NJDOH), Communicable Disease Service (CDS) at 609-826-5964, Monday through Friday 8:00 AM - 5:00 PM. On weekends, evenings and holidays, CDS can be reached at (609) 392-2020.

**Local Health Departments**

When a local health department receives a report regarding a patient meeting the MERS surveillance criteria, the protocols contained within this document for screening, isolation, and collection of lab specimens should be followed. Information should be communicated **IMMEDIATELY** to NJDOH CDS at 609-826-5964, Monday through Friday 8:00 AM - 5:00 PM. On weekends, evenings and holidays, CDS can be reached at (609) 392-2020.

The healthcare provider and/or the local health department should complete the **Middle East Respiratory Syndrome (MERS) Patient Under Investigation (PUI) Short Form** (please see the last page of this document). Completed forms should be faxed to CDS at 609-826-5972. This form will be reviewed by CDS staff who will make the final determination if the case meets surveillance criteria and if a specimen will be accepted for testing. In addition to the PUI Form, details regarding the case should be entered into the Communicable Disease Reporting and Surveillance System (CDRSS) under “MIDDLE EAST RESPIRATORY SYNDROME CORONAVIRUS (MERS-COV)”.

PUI Definition—Does the patient have: *(Please consult CDC website at http://www.cdc.gov/coronavirus/mers/case-def.html)*

1. Acute respiratory infection with fever (≥ 38°C, 100.4°F) and cough?  □ Yes  □ No  □ Unknown
2. Clinical or radiographic evidence of pneumonia or acute respiratory distress syndrome (ARDS)?  □ Yes  □ No  □ Unknown
3. Travel from the Arabian Peninsula or neighboring countries’ 14 days before illness onset?  □ Yes  □ No  □ Unknown
   If yes, which countries? ___________________________ Date of travel to/from the Middle East: / / / /

Patient Demographic Information

Clinical Presentation, History and Risk Factors

4. Date of symptom onset: / / / /
5. Symptoms (Check all that apply): □ Fever  □ Dry cough  □ Productive cough  □ Chills  □ Sore throat  □ Headache
   □ Muscle aches  □ Shortness of breath  □ Vomiting  □ Abdominal pain  □ Diarrhea  □ Other ________________________
6. In the 14 days before symptom onset did the patient have close contact with a recent ill traveler from the Arabian Peninsula or neighboring countries? □ Yes  □ No  □ Unknown  If yes, which countries? ___________________________
7. Is the patient (Check all that apply): □ Health care worker (HCW)  □ US military  □ Flight crew  □ Other __________________________
8. Concurrent risk factors (Check all that apply): □ Immunocompromised  □ Pregnant  □ Unknown  □ Other __________________________

Clinical Outcomes

9. Is/Was the patient:  □ Yes  □ No  □ Unknown
   a. Hospitalized? □ Yes  □ No  □ Unknown  If yes, date: / / / /
   b. Admitted to ICU? □ Yes  □ No  □ Unknown
   c. Intubated? □ Yes  □ No  □ Unknown
10. Is/Has patient receiving/received a diagnosis of:  □ Yes  □ No  □ Unknown
   Pneumonia?  □ Yes  □ No  □ Unknown
   ARDS? □ Yes  □ No  □ Unknown
   Renal failure? □ Yes  □ No  □ Unknown

11. Does the patient have a non-MERS etiology for their respiratory illness but has not responded to appropriate therapy? □ Yes  □ No  □ Unknown

12. Has the patient died? □ Yes  □ No  □ Unknown

Infection Control

13. When hospitalized, is/was the patient in a:  □ Yes  □ No  □ Unknown
   a. Negative pressure room? □ Yes  □ No  □ Unknown
   b. Private room? □ Yes  □ No  □ Unknown
14. Are/Were surgical masks being used by the patient during transport? □ Yes  □ No  □ Unknown

15. What personal protective equipment are/were being used by HCW when entering the patient’s room (Check all that apply): □ Gloves  □ Gowns  □ Eye protection (goggles or face shield)  □ N95/other form of respiratory protection (e.g., PAPR)
   □ Facemask  □ Unknown
