

**Report Highlight:**

- 19/21 counties have submitted mosquito pools for testing. West Nile Virus (WNV) has been detected in mosquito pools in one county (Burlington); no pools tested positive for WNV in week 23.
- One Jamestown Canyon Virus pool was detected in week 22 from Bergen County.
- There have been no WNV or EEE positive cases detected in humans or animals this season.
- Tick-related ED visits in 2022 are below seasonal trends observed in the past 5 years but are above 2021 levels.

## 1. Human Cases

N.J.A.C.8:57 mandates public health reporting of communicable diseases. 2022 data reflect cases that have been approved by NJDOH and do not include cases under investigation. All 2022 numbers are preliminary and subject to change.

### Human Cases

Mosquito-borne diseases			Tickborne Diseases/Conditions		
	2022	2021		2022	2021
Chikungunya	1	4	Alpha-gal syndrome	27	-
Dengue	4	12	Anaplasmosis	19	202
Eastern equine encephalitis	-	-	Babesiosis	7	258
Jamestown Canyon	-	2	<i>Borrelia miyamotoi</i>	-	16
Malaria	15	71	Ehrlichiosis ( <i>chaffeensis, ewingii</i> )	11	77
West Nile	-	36	Lyme disease*	85	3,518
Zika	-	-	Powassan	-	-
			Spotted fever group rickettsioses	3	39
			Tularemia	-	4

\*Lyme disease surveillance has transitioned to a laboratory-only surveillance approach in 2022; as such, case reporting is delayed.

## 2. Mosquito Testing

The New Jersey Department of Health Public Health and Environmental Laboratories (PHEL) and the Cape May County Department of Mosquito Control Bio-safety Level 3 Laboratory (CMBSL3) perform arboviral testing on mosquito pools collected by county mosquito control agencies throughout New Jersey.

### West Nile virus (WNV):

- A total of 970 mosquito pools from 19 counties (Atlantic, Bergen, Burlington, Camden, Cape May, Cumberland, Gloucester, Hudson, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Salem, Somerset, Sussex, Warren) have been tested for WNV.
- The first WNV positive mosquito pool (*Aedes cantator*) was detected in week 22 from Burlington County. In 2021, the first WNV positive mosquito pool was identified in week 23 from Somerset County. This is the earliest detection since 2019, when Passaic County had a positive pool in week 22.

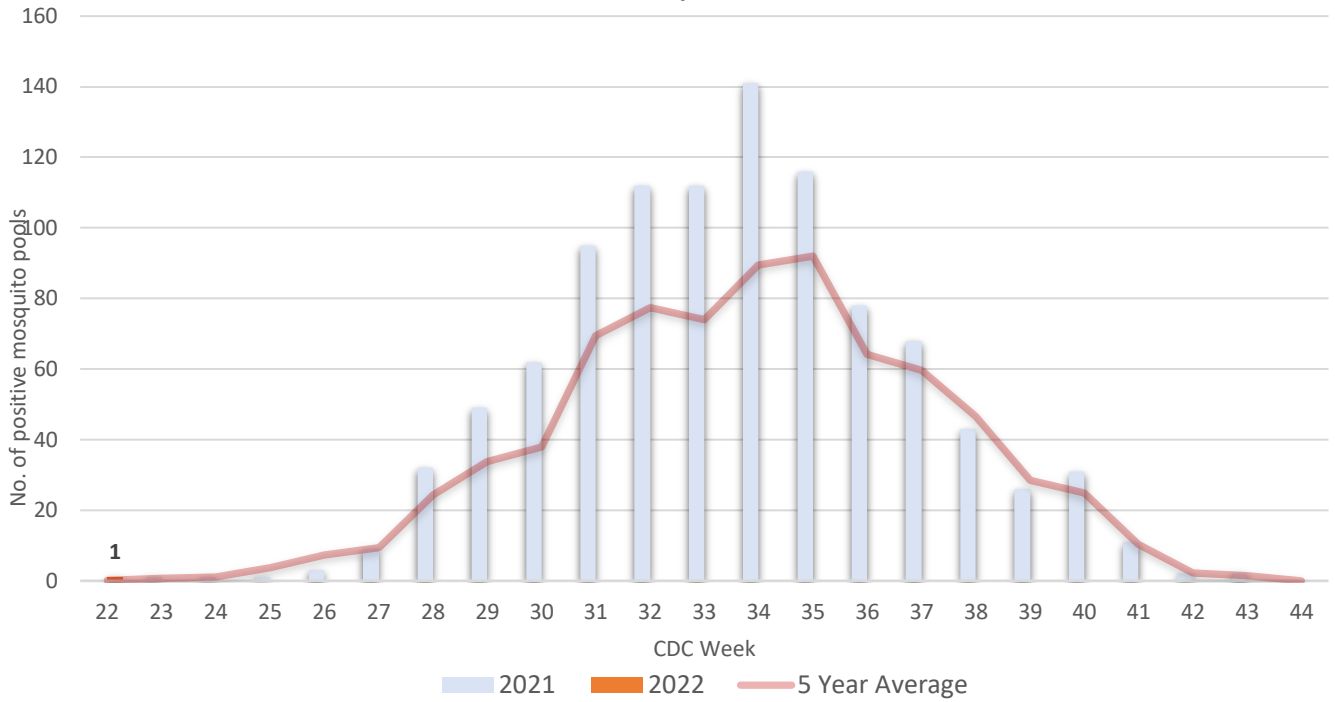

\*Test results may be incomplete; counties submit pools for testing on specific weekdays. Mosquito testing data reflects test results received from PHEL as of June 15, 2022

### WNV Positive Mosquito Pools

County	Week 23		Cumulative Total (Week 23)	
	2022*	2021	2022*	2021
Atlantic

### West Nile Virus Positive Mosquito Pools, NJ (2021-2022)

### Eastern equine encephalitis virus (EEE)

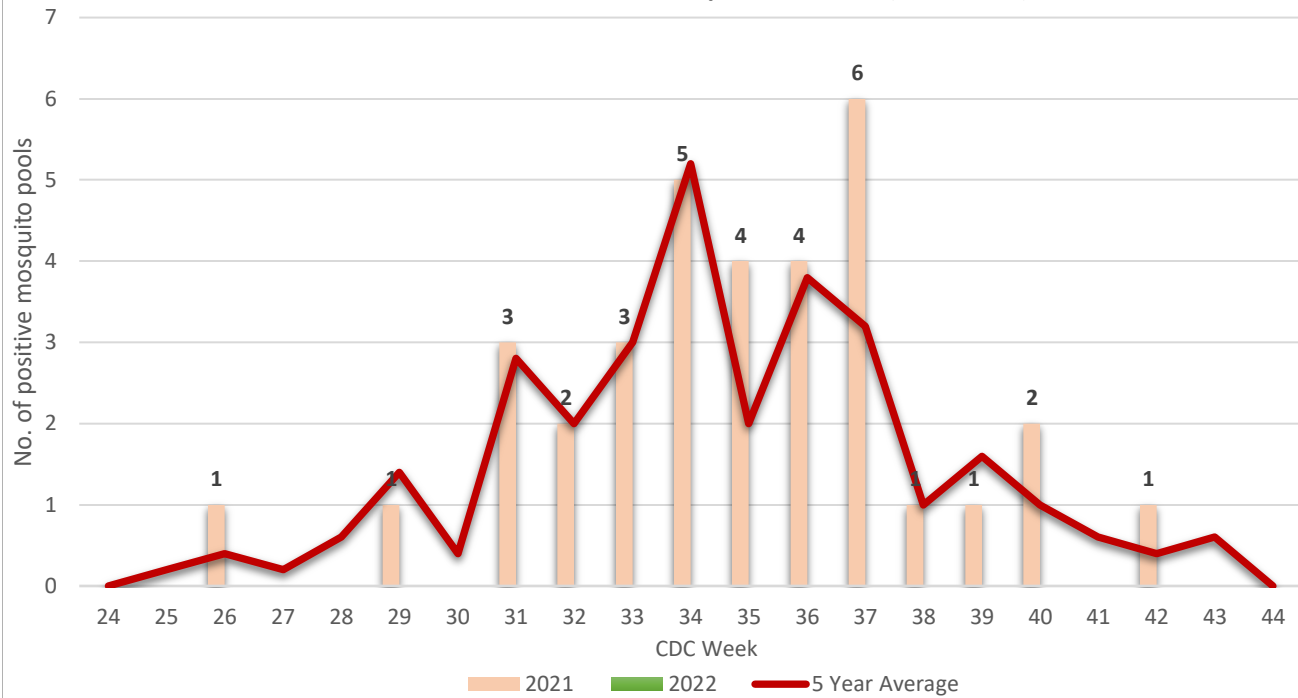

- A total of 959 mosquito pools from 19 counties (Atlantic, Bergen, Burlington, Camden, Cape May, Cumberland, Gloucester, Hudson, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Salem, Somerset, Sussex, Warren) have been tested for EEE.
- No EEE positive mosquito pools have been identified in 2022. In 2021, the first positive mosquito pool was detected in Week 26 from Gloucester County.

#### EEE Positive Mosquito Pools

County	WEEK 23		Cumulative Total (WEEK 23)	
	2022*	2021	2022*	2021

<b>Total</b>	<b>959</b>	<b>-</b>	<b>904</b>	<b>1</b>	<b>11</b>	<b>-</b>	<b>4</b>	<b>-</b>	<b>4</b>	<b>-</b>	<b>4</b>	<b>-</b>

<sup>a</sup> St. Louis encephalitis virus (SLE), Jamestown Canyon Virus (JCV), La Crosse encephalitis virus (LAC), Chikungunya virus (CHIKV), Dengue virus (DENV), Zika Virus (ZIKV)  
 Numbers in white columns represent number of pools tested to date in 2022

Numbers in green shaded columns represent positive pools in 2022

**Jamestown Canyon virus (JCV):**

- One mosquito pool (*Ae. cantator*) from Bergen County tested positive for JCV on Week 22. In 2021, the first positive pool was detected on Week 27 from Sussex County.
- Jamestown Canyon virus has not been detected in humans in 2022.
- NJ reported 2 human JCV cases last year in Sussex County (week 18) and in Essex County (week 36). The first NJ JCV case was reported in 2015 in Sussex County.
- In 2021, eight positive JCV pools were reported in Atlantic, Camden, Essex, Gloucester, and Sussex counties.

**3. Equine/Avian /Other Animal Testing**

Equine testing for WNV and EEE is conducted at the New Jersey Department of Agriculture's Animal Health and Diagnostic Laboratory.

- No animals have tested positive for WNV or EEE in 2022.
- Routine avian testing has been discontinued but is available upon request at PHEL.

**WNV/EEE Positive Test Results**

## 5. Syndromic Surveillance for Tick-related Emergency Department Visits

EpiCenter is a syndromic surveillance system developed and maintained by Health Monitoring Systems, Inc, for monitoring by health departments in the United States. New Jersey's EpiCenter receives real time Emergency Department (ED) data from 78 acute care and satellite health (99 percent reporting) facilities statewide. The system collects "chief complaint" information and limited patient registration data from existing ED computer systems.

The chart below represents NJ residents seen at emergency departments statewide with a tick-bite complaint or signs/symptoms associated with a reported tick-bite. Tick-related ED visits occur throughout the year with peak number of visits in the summer months and a smaller peak in the fall weeks when adult *Ixodes scapularis* (blacklegged ticks) are active.

In Week 23, the number of ED visits is significantly lower than the 5-year average. ED visits started to increase starting on week 12, with current levels slightly higher compared to last year.

Data reflects ED visits downloaded from EpiCenter as of June 15, 2022
