Histology coding for Digestive Sites:
SEER Program Coding and Staging Manual indicates high grade dysplasia of esophagus, stomach, and small intestine are reportable. The ICD-O-3.2 does not include “high grade dysplasia” as equivalent to “high grade squamous dysplasia.”

What is the correct histology code for “high grade dysplasia” (not specified to be squamous or glandular) for esophagus, stomach, and small intestine for cases diagnosed beginning in 2024?

According to SEER Sing 20240021, the correct histology for “high grade dysplasia NOS” (not specified to be squamous or glandular) that originates in the stomach, small intestine, and esophagus is:

Stomach: Assign code 8148/2 glandular intraepithelial neoplasia, high grade using the Other Sites Solid Tumor Rules, Table 6: Stomach Histologies and as described in the WHO Classification of Digestive Tumors, 5th edition.

Small intestine and Esophagus: Assign code 8148/2 glandular intraepithelial neoplasia, high grade, using the Other Sites Solid Tumor Rules, Other Sites Histology Rules, Rule H4/H26. The following note is listed for both of these rules.

Note: This list may not include all reportable neoplasms for 8148/2. See SEER Program Coding and Staging Manual or STORE manual for reportable neoplasms.

<table>
<thead>
<tr>
<th>Recurrence</th>
<th>What cancer should be reported to NJSCR?</th>
</tr>
</thead>
<tbody>
<tr>
<td>When there is a recurrence less than or equal to X years of diagnosis, the “clock” starts over.</td>
<td></td>
</tr>
<tr>
<td>• The time interval is calculated from the date of last recurrence.</td>
<td></td>
</tr>
<tr>
<td>• The patient must have been disease-free for greater than X years from the date of the last recurrence.</td>
<td></td>
</tr>
<tr>
<td>• When it is unknown/not documented whether the patient had a recurrence, default to date of diagnosis to compute the time interval.</td>
<td></td>
</tr>
<tr>
<td>• The ONLY exception is when a pathologist compares slides from the subsequent tumor to the “original” tumor and documents the subsequent tumor is a recurrence of the previous primary.</td>
<td></td>
</tr>
</tbody>
</table>

Never code multiple primaries based only on a physician’s statement of “recurrence” or “recurrent”.

Consult-only cases are reportable. A consult may be done to confirm a diagnosis or treatment plan.

Private outpatient specimens are reportable. These specimens are submitted from a physician's office to be read by the hospital pathologist and the patient is not registered as an inpatient or outpatient at the hospital.

Check out the 2024 NJSCR Program Manual for more information.
Diagnostic Confirmation Coding for Solid Tumors

- These codes are in priority order; code 1 had the highest priority.
- Always code the procedure with the lower numeric value when presence of cancer is confirmed with multiple methods.
- Change to a higher-priority code, if at any time during the course of disease the patient has a diagnostic confirmation with a higher priority.
- Example: Benign brain tumor diagnosed on MRI. Assign diagnostic confirmation code 7. Patient later becomes symptomatic and the tumor is surgically removed. Change the diagnostic confirmation code to 1.

Check out SEER Manual Diagnostic Coding Section for more information and full list of notes!

Hormone Therapy Coding for Thyroid Primaries

Code Hormone Therapy as 01 for follicular and/or papillary thyroid cancer when thyroid hormone therapy is given.

Example: Levothyroxine, Synthroid

Do not code replacement therapy as treatment unless the tumor is papillary and/or follicular.

The thyroid gland produces hormones that influence essentially every organ, tissue and cell in the body. When the thyroid is partially or totally removed, it is no longer able to secrete these essential hormones and the patient is placed on hormone replacement therapy.

SEER Coding Guidelines for Thyroid

Question:

Head & Neck: How is histology coded for laryngeal intraepithelial neoplasia II-III (LIN II or LIN III)? See Discussion.

Answer:

Assign histology code, 8077/2 (squamous intraepithelial neoplasia, high grade) for LIN III and for LIN II. ICD-O-3.2 lists squamous intraepithelial neoplasia, grade II and grade III as 8077/2 indicating it is reportable. ICD-O-3.2 does not list every site-specific type of intraepithelial neoplasia. Check the SEER manual for reportable and non-reportable examples.

**Melanoma SSDI Clinical Margin Width**

This SSDI is effective for diagnosis year 2023+

*Code the peripheral surgical margins from the operative report from a wide excision.*

- Do not use the pathology report to code this data item.
- Margins from wide excision-measured from the edge of the lesion or the prior excision scar to the peripheral margin of the specimen, do not use deep margin
- Do not add margins together
- If multiple wide excisions are performed, code the clinical margin width from the procedure with the largest margin.

**Order of priority:**

1. Operative Note  
2. Physician statement in medical record

Record stated margin in centimeters. Include decimal point. **Example:** 0.5 cm - 0.5

**Physician statement of clinical margin width**
can be used to code this data item when no other information is available, or the available information is ambiguous.

---

**Question:**

Histology--Prostate: Is histology coded as 8045 (Combined small cell carcinoma) for a 2023 diagnosis of two-component carcinoma comprised of both acinar adenocarcinoma and small cell neuroendocrine carcinoma of the prostate?

**Discussion:**

This patient does not have a previous diagnosis of prostate adenocarcinoma nor a previous history of androgen-deprivation therapy. Does the logic in the Other Sites Solid Tumor Rules (STRs) noted in SINQ 20200052 still apply? This SINQ confirms a diagnosis of mixed prostatic adenocarcinoma and small cell neuroendocrine carcinoma is 8045. This matches the STRs instructions for Rule H21 and Table 2 (Mixed and Combination Codes), row 1. Row 1 indicates a mixed small cell carcinoma and adenocarcinoma is combined small cell carcinoma (8045). For a patient without previous treatment, is this the correct mixed histology code?

**Answer:**

Code histology as combined small cell carcinoma (8045) based on the Other Sites Solid Tumor Rules, May 2023 Update, Table 2, Mixed and Combination Codes, for this mixed histology prostate carcinoma consisting of adenocarcinoma and small cell neuroendocrine carcinoma regardless of treatment status. This is similar to SINQ 20200052 that applies to one tumor with mixed histologies.

EOD and SS2018 Version 9 Update

AJCC released version 9 for NET (excluding Adrenal Gland) and Vulva diseases which will be effective for cases diagnosed 1/1/2024 or later. There are now 2 schemas for each. SEER*RSA has been updated to reflect these changes.

The Registrar Staging Assistant (SEER*RSA) website is intended for use by cancer registrars to help with diagnosis 2018 and forward coding:
- Extent of Disease (EOD) 2018
- Summary Stage 2018 (SS2018)
- Site-Specific Data Items
- Grade

Current sites that have both AJCC 8th Edition and version 9 coding guidelines include: Anus, Appendix, Brain, Cervix, CNS Other, Intracranial Gland, NET tumors, Vulva

<tr>
<th>2024 Coding Instructions for Primary Site: GYN Sites</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the choice is between ovary, fallopian tube, or primary peritoneal without designation of the site of origin, any indication of fallopian tube involvement indicates the primary tumor is a tubal primary.</td>
</tr>
</tbody>
</table>

Fallopian tube primary carcinomas can be confirmed by reviewing the fallopian tube sections as described on the pathology report to document the presence of either serous tubal intraepithelial carcinoma (STIC) and/or tubal mucosal invasive serous carcinoma. In the absence of fallopian tube involvement, refer to the histology and look at the treatment plans for the patient.

If all else fails, assign C579 as a last resort.

<tr>
<th>Coding Guidelines for Bladder</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use the information from reports in the following priority order to code a subsite when the medical record contains conflicting information:</td>
</tr>
<tr>
<td>- Operative report (TURB)</td>
</tr>
<tr>
<td>- Pathology report</td>
</tr>
<tr>
<td>- Multifocal Tumors</td>
</tr>
</tbody>
</table>

**Coding Bladder subsites**

C679 Assign when there are multifocal tumors all of the same behavior in more than one subsite of the bladder and the specific subsite of origin is not known.

C678 Assign when:
- A single tumor of any histology overlaps subsites of the bladder
- A single tumor or non-contiguous tumors which are:
  - Urothelial carcinoma in situ 8120/2 AND involves only bladder and one or both ureters (no other urinary sites involved) Note: Overlapping non-invasive tumors of the bladder and ureter almost always originate in the bladder

C688 Assign when a single tumor overlaps two urinary sites and the origin is unknown/not documented

If the TURB or pathology proves invasive tumor in one subsite and in situ tumor in all other involved subsites, code to the subsite involved with invasive tumor.
