Summary of Findings:

- Figure 1: Cumberland county has fewer cardiovascular, genitourinary and more orofacial birth defects compared to state average.
- Figure 2: Hispanic children have the highest rate of chromosomal conditions.
- Figure 3: Older mothers (35+) are more likely to have children with chromosomal and genitourinary abnormality.

*See information page for definition of conditions and program details.

Based on New Jersey birth defect registry and electronic birth certificate data.
