Summary of Findings:

Figure 1: Mercer county has more cardiovascular, chromosomal and fewer genitourinary birth defects compared to state average.

Figure 2: Black children have the highest rate of cardiovascular conditions; Hispanic children have the highest rate of chromosomal conditions.

Figure 3: Older mothers (35+) are more likely to have children with chromosomal abnormality.

*See information page for definition of conditions and program details.
Based on New Jersey birth defect registry and electronic birth certificate data.
