Figure 1: Birth Defect Prevalence compared to Statewide Prevalence, 2013-2017

Figure 2: Rate of Children with Birth Anomalies by Maternal Race/Ethnicity, 2013-2017

Figure 3: Rate of Children with Birth Anomalies by Age of Mother, 2013-2017

Summary of Findings:

Figure 1: Warren county has more musculoskeletal birth defects compared to state average.

Figure 2: Black children have the highest rate of cardiovascular conditions.

Figure 3: Older mothers (35+) are more likely to have children with chromosomal and cardiovascular abnormality.

*See information page for definition of conditions and program details.

Based on New Jersey birth defect registry and electronic birth certificate data.
