New Jersey’s [Surface Water Quality Standards (SWQS)](http://www.nj.gov/dep/wq/swqs.html) establish the designated uses of the State's surface waters, classify surface waters based on those uses, and specify the water quality criteria and other policies necessary to attain those uses. Designated uses include water supply for drinking, agriculture and industrial uses, fish consumption, shellfish resources, propagation of fish and wildlife, and recreation.

The table below show the designated use information for your municipality. For more information on Surface Water Quality, see the Healthy Community Planning Report for this municipality.

Maps for different boroughs and municipalities are shown with different colors indicating the rate of COPD visits. The map includes various boroughs and towns highlighted in different colors to represent different rate categories.

Miles: 0 1.5 3

Explanation:

- The map shows the distribution of COPD emergency department visits across different municipalities in Bergen County.
- Saddle River Boro is highlighted in a distinct color indicating it is above the average rate.
- The map uses a gradient of colors to represent different rates, with Above, Below, No Difference, and Suppressed categories.
- The map also indicates the maximum distance covered, which is 3 miles.

The map provides a visual representation of how different areas compare in terms of COPD emergency department visits, allowing for a better understanding of the trends and disparities within the region.
