New Jersey’s Surface Water Quality Standards (SWQS) establish the designated uses of the State's surface waters, classify surface waters based on those uses, and specify the water quality criteria and other policies necessary to attain those uses. Designated uses include water supply for drinking, agriculture and industrial uses, fish consumption, shellfish resources, propagation of fish and wildlife, and recreation.

The table below show the designated use information for your municipality. For more information on Surface Water Quality, see the Healthy Community Planning Report for this municipality.

- Municipal boundaries
- Age-adjusted death rates for Union City and Hudson

### Analysis
- The map shows the distribution of lung cancer deaths in Union City and Hudson from 2015 to 2019, with a focus on age-adjusted death rates per 100,000 people. The data is color-coded to indicate whether the death rate is above, below, or no difference compared to the state average.

### Interpretation
- The map highlights areas where lung cancer death rates are significantly higher or lower than the state average, aiding in the identification of potential risk factors or areas for targeted health initiatives.
