Source: New Jersey 2010 UB Data.

^ = Rate is based on a denominator less than 30 and should be taken with caution.

\* = Statistically significantly below state average, \*\* = Statistically significantly above state average.

Expected rate is the rate the hospital would have if it had the same case-mix (e.g., age, gender, DRG, and comorbidity categories) as the reference or statewide population. If the observed rate is higher than the expected rate (i.e., the ratio of observed to expected is greater than 1.0), it suggests that the hospital performed worse than the reference population on that indicator.

Missing (.) indicates that the hospital did not perform the procedure during the year in question; or it did less than 3 procedures (risk-adjusted rates are not computed when the denominator is less than 3).

Source: New Jersey 2010 UB Data.

^ = Rate is based on a denominator less than 30 and should be taken with caution.

\* = Statistically significantly below state average, \*\* = Statistically significantly above state average.

Expected rate is the rate the hospital would have if it had the same case-mix (e.g., age, gender, DRG, and comorbidity categories) as the reference or statewide population. If the observed rate is higher than the expected rate (i.e., the ratio of observed to expected is greater than 1.0), it suggests that the hospital performed worse than the reference population on that indicator.

Missing (.) indicates that the hospital did not perform the procedure during the year in question; or it did less than 3 procedures (risk-adjusted rates are not computed when the denominator is less than 3).
