

**Hamilton Township Animal Shelter and Adoption Center  
2100 Sylvan Avenue  
Hamilton, NJ 08610**

**Continuation Sheet for the scheduled reinspection conducted on January 15, 2019 by Linda Frese and Dr. Colin Campbell of the New Jersey Department of Health, accompanied by Jeffery Plunkett, Health Officer and Lisa Surtees, Principal Registered Environmental Health Specialist.**

**N.J.A.C. 8:23A Section and Noted Deficiency:**

**1.4 (f) and 1.5 (e)** The newly painted surfaces of the dog enclosures located in the older section of the facility had started to peel. This product is under warranty and is currently being investigated by the manufacturer and will be repaired soon.

**1.6 (a) 4.** Squeegees were used on dog enclosures to remove excess water after the cleaning process, but the enclosures in the new section of the facility were wet when the dogs were returned to them at the time of this inspection. It was suggested to use towels or another mechanism to speed the drying process to prevent irritation to the dog's paws or injury to the dogs being housed in these wet enclosures.

Note: Complaint received by the NJDOH indicated that cats were missing from the facility on 12/19/18. Records were reviewed on the day of this inspection and this review continued through 1/17/19. All the cats noted on the 12/18/18 inspection report were accounted for and there were 21 cats documented at the facility on 12/19/18.
