

Unique Employers by County

There were 442 silicosis cases associated with 217 employers in NJ. This means that many employers were associated with multiple cases of silicosis. Employers were located in 19 of NJ's 21 counties. In ratio of cases to employer, Warren County stands out: of 34 total cases, 30 were associated with one foundry. Mercer County, with 116 cases, had 13 multiple-case employers, ten of which were in the pottery industry. Though Ocean County had many fewer cases (n=11), seven were employed at the same mine.
