

County College of Morris

I. Major capital projects.

1. Capital projects underway in FY2012:

- New photovoltaic system solar panels are being installed over several parking lots and rooftops. The panels are expected to generate 3,900,000 kWh annually, which represents about 45% of the college's yearly energy usage. There will be no loss of parking spaces on the campus as a result of the solar installation.
- With the new exterior and interior lighting upgrade/replacement projects, the new fixtures will improve the energy efficiency of the College's lighting system.
