

To: Institutions of Higher Education
From: Office of the Secretary of Higher Education
Date: September 6, 2023
Subject: New Jersey 2023-2024 College & University Flu Challenge

The New Jersey Department of Health (NJDOH) announced the commencement of the 7th Annual New Jersey College & University Flu Challenge. This collaborative effort between NJDOH and institutions of higher education is aimed at bolstering flu vaccination rates among students as well as amplifying awareness about the benefits of vaccination.

The Flu Challenge is designed to foster friendly competition between institutions to determine which campus can achieve the highest flu vaccination rates, with each participating institution developing and implementing a unique influenza campaign tailored to the needs of its student body. Flu vaccination coverage will be assessed through a brief student self-reported survey. Participating institutions receive access to educational resources and the opportunity to win the challenge's traveling trophy for the year.

The deadline to enroll and submit student surveys is December 31, 2023. Additional information about the Challenge, including a toolkit, can be found in the attached PDF documents and on the NJDOH website [here](#).

Thank you for your continued support and commitment to the health and safety of our students.

CHALLENGE DETAILS

New Jersey 2023-2024 College & University Flu Challenge

Challenge Overview

The purpose of the Challenge is to increase flu awareness and vaccination rates of college-aged young adults through a friendly statewide competition among participating colleges and universities in New Jersey. Students will be asked to self-report their vaccination status via a short online survey. The institutions with the highest flu vaccination coverage percent (based on undergraduate student population) will be presented with a traveling trophy from the New Jersey Department of Health (NJDOH).

Student Self-Report Vaccination Survey

The survey will be available beginning toward the end of September. The link for students to report their vaccination status is: <http://healthsurveys.nj.gov/NoviSurvey/n/ChallengeStudent2023.aspx>.

Students will be asked to report school name, month of vaccination, place where flu vaccine was received, and age. No identifying information will be collected. Multiple responses can be submitted per computer (there will be no limit to responses per IP address) as it is recognized that students often use communal computers. Because no identifying information will be collected, NJDOH will be utilizing the honor system.

Beyond collecting data, one of the purposes of the self-report vaccination survey is to raise awareness of flu vaccination among students and to get students talking about flu vaccination. Therefore, college health centers are not permitted to enter data into the survey on behalf of the students. Student health centers should encourage all students vaccinated at their facility to take the survey and can offer a computer on-site to complete it. However, health center staff should not be filling out the survey for students.

The challenge winners will be determined based on the percent coverage of flu vaccines received by students through **December 31, 2023**. For more details see next page.

Congrats to the 2022-2023 Challenge winners:

LARGE SCHOOLS: New Jersey City University
MEDIUM SCHOOLS: The College of New Jersey
SMALL SCHOOLS: Best Care College

The traveling trophy will be engraved with the winning school name and will relocate to the new winner for each year of the challenge.

For the most up-to-date announcements, visit www.nj.gov/health/cd/edu_training/vpdp_flu_challenge.shtml.

CHALLENGE DETAILS

New Jersey 2023-2024 College & University Flu Challenge

Determining the Challenge Winner

There will be three categories of participants: large schools (10,000+ students), medium schools (5,000+ students), and small schools (<5,000 students).* An overall challenge winner will be determined for each of the three categories through student self-reported vaccination survey data (see page prior). The institutions with the highest flu vaccination coverage (number of students indicating they received vaccine on the survey, divided by the undergraduate student population) will win the challenge for their respective category. The challenge winners will be announced in Spring 2024.

All participants will receive a certificate of recognition and will be eligible for the New Jersey Influenza Honor Roll. For more information on the Honor Roll, please visit www.nj.gov/health/cd/edu_training/vpdp_flu_honor_roll.shtml. The Challenge winners will receive a traveling trophy, which will relocate to the new winner with each year of the Challenge.

**Depending on the population of the schools that enroll, category ranges may be adjusted.*

New Jersey Immunization Information System (NJIS)

By participating in this challenge, enrolled colleges and universities are strongly encouraged to enter all flu vaccine doses administered by the health center into the official statewide web-based immunization registry, NJIS. While state law does not require documentation for individuals older than seven years of age, it is an immunization best practice. NJIS is a great tool to assist in increasing immunization rates. It provides a centralized location for immunization records for all age groups across the lifespan.

Resources

At the beginning of the campaign, you will be provided with a toolkit from NJDOH (image below). The toolkit contains information on current flu vaccination rates, ideas for improving vaccination coverage, and interactive tools to help design a campaign. NJDOH will also provide electronic versions of flyers and animated videos to help promote the Challenge on campus. Additionally, updates on survey data will be provided monthly to each of the participating schools.

Timeline

- **End of August** – Student survey will open
- **Mid-September (date TBD)** – Kick-off webinar
- **Mid-October** – First survey data update
- **November 1** – Second survey data update
- **December 6** – Third survey data update
- **December 31** – Student survey will close
- **Spring 2024 (date TBD)** – Winners will be announced and presentation of award to follow

For questions or comments, please contact Zachary Ehrlich at Zachary.Ehrlich@doh.nj.gov or at 609-826-4861.

ADDITIONAL RESOURCES

Why influenza?

Flu can affect anyone, but several lifestyle factors of college/university students can put them at increased risk of contracting the flu. These factors may include: close contact at places such as dorms, classrooms, public transportation, parties, and sporting events. Further, lack of sleep, unhealthy eating, and irregular exercise can weaken the immune system, making these young adults more vulnerable to the flu.

Influenza outbreaks on campus have been reported to have a prevalence ranging from **nine to 48% of college students**.¹ These outbreaks can place a huge burden on the health system, and can also impact student academic performance. On average, when a college student gets the flu, they experience illness for **eight or more days**.²

Each time a student contracts the flu, they are also at risk of further spreading the disease. Working to raise awareness of the benefits of influenza vaccination can help to keep your campus and student body healthy throughout the flu season.

#1

Are you up for the challenge?

You are in a unique position to help spread the word about recommended vaccines for college-age students, and the New Jersey Department of Health (NJDOH) would like to team up! While reaching the college/university student population with important health messages can be tough, it is critical that we protect them from the flu. NJDOH would like to challenge you to ramp up your flu vaccination efforts this season. Join NJDOH in a friendly competition this 2022-2023 flu season to encourage students to get vaccinated against the flu.

The materials in this toolkit will assist you in promoting the importance of annual flu vaccination to students. These materials have been created to aid you in developing a campaign plan and to increase demand for flu vaccine on your campus.

If you have any questions, you may contact the Adolescent/Adult Immunization Coordinator at Zachary.Ehrlich@doh.nj.gov.

More information on the Challenge is available at: nj.gov/health/cd/edu_training/vpdp_flu_challenge.shtml.

² Nichol, KL, Tummers K, Hoyer-Leitzel A, et al. Modeling Seasonal Influenza Outbreak in a Closed College Campus: Impact of Pre-Season Vaccination, In-Season Vaccination and Holidays/Breaks. *PLoS ONE*, 5(3), e9548. <http://doi.org/10.1371/journal.pone.0009548>

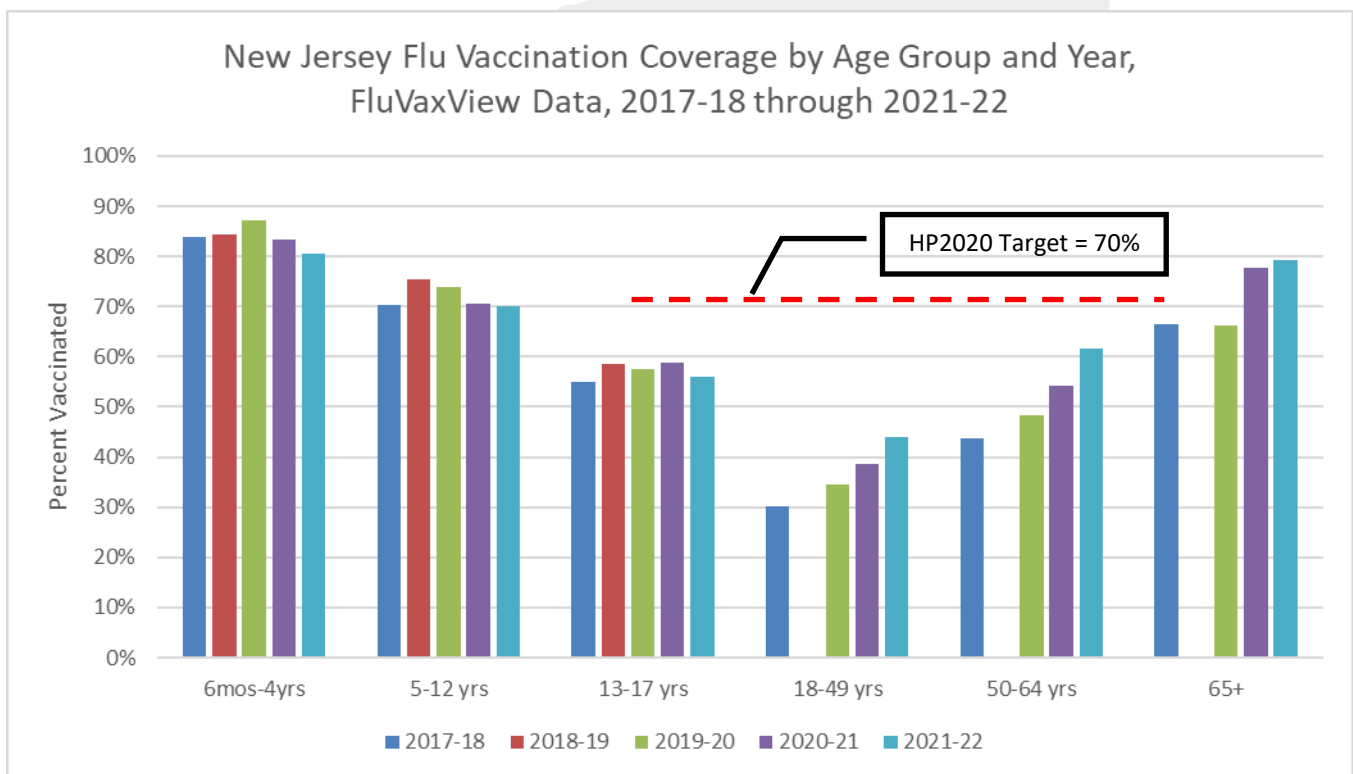

New Jersey Flu Vaccination Data

Trends in vaccination coverage from 2017 through 2022

One objective of Healthy People 2020 is to increase annual seasonal influenza vaccination for adults 18 and older. The target for the year 2020 is to reach at least 70%.¹ Data from the 2020-21 flu season in New Jersey indicates that we are not yet achieving that goal.

Though there is not currently data available specific to college students in New Jersey, we can see that the age group with the lowest flu vaccination coverage is among ages 18 to 49 years. During the 2020-21 flu season, an estimated 38.5% of young adults received a flu vaccine, indicating that there are still too few young adults who choose to get the vaccine. This data lets us know that we need to continue to target additional messaging towards adults within those age groups.

Age Group	2020-21	2021-22	Change
≥ 6 mos.	55.20%	59.30%	7.43%
≥ 18 yrs	51.30%	57.00%	11.11%
6 mos. - 4 yrs	83.30%	80.60%	-3.24%
5-12 yrs	70.60%	70.00%	-0.85%
13-17 yrs	58.90%	55.90%	-5.09%
18-49 yrs	38.50%	43.90%	14.03%
50-64 yrs	54.30%	61.60%	13.44%
≥ 65 yrs	77.80%	79.20%	1.80%

¹ [healthypeople.gov/2020/topics-objectives/topic/immunization-and-infectious-diseases/objectives](https://www.healthypeople.gov/2020/topics-objectives/topic/immunization-and-infectious-diseases/objectives)
 Data source: CDC FluVaxView, 2021. Note: New Jersey did not collect data for the 2018-2019 flu season for adults 18 and older.

What are the next steps?

GETTING STARTED

1. **Visit the [Challenge webpage](#)** to view resources and rules.
2. **Register your school.** After reviewing the rules and regulations, complete the short registration form (link on webpage) to let us know you would like to participate.
3. **Start planning!** Use the toolkit to get ideas and start putting together your team.
4. **Stay involved** throughout the flu season with monthly updates.

We understand that persuading college students to change their health behaviors can be challenging. However, annual flu vaccination is an important preventive behavior that students should continue throughout their lifetime.

You may use the resources in this toolkit to assist in creating awareness on your campus and to map out a plan for your institution. There are numerous ideas and strategies proposed. Feel free to pick and choose the ones that will work best on your campus, or develop your own!

Goal: Increase campus flu awareness and vaccination coverage

Key Themes	Internal Competitions	Vaccine Accessibility & Resources	Media
<ul style="list-style-type: none"> • Severity of Flu Illness • Importance of Vaccination • Vaccine Safety • Prevention of Flu 	<ul style="list-style-type: none"> • Greek Life • Nursing/Public Health Programs • Academic Majors • Athletic Teams • Student Life • Residence Halls 	<ul style="list-style-type: none"> • Local Clinics, Pharmacies, Local Health Departments • Insurance • Statewide Immunization Registry (NJIS) • CDC Resources • NJDOH Resources 	<ul style="list-style-type: none"> • Radio • Posters • Emails • Newspaper • TV • Social Media

Sharing the Student Survey

Data to determine the Challenge winners are pulled from the student self-reported survey. It is important to share a link to the survey with all students. Some ideas for how to share the survey link are below. In addition to sharing a link to the survey, it may be helpful to include a QR code on posters or flyers. Most smartphones have the ability to hover over the QR code, which will take the student directly to the survey rather than having to type in a link. The QR code included below can be used, or an image of the QR code can be found on the Challenge webpage for your use.

A modifiable half-page handout with the QR code is available for download on the [Challenge webpage](#).

Students should complete the survey no matter where they received the vaccine!

1. Encourage professors to post a slide with the link and/or QR code prior to starting class.
2. Create a flyer with the link and/or QR code to post in bathroom stalls.
3. Share the link via a campus-wide email when promoting flu vaccination.
4. If conducting flu vaccination clinics, encourage students to complete the survey as part of the clinic process. It may be helpful to have a tablet or laptop on hand to facilitate students completing the survey.
5. Link to the survey on all social media channels.
6. Consider parent publications to encourage parents to speak with their children about getting vaccinated.

New Jersey College & University Flu Challenge

2023-2024 Student Survey Link

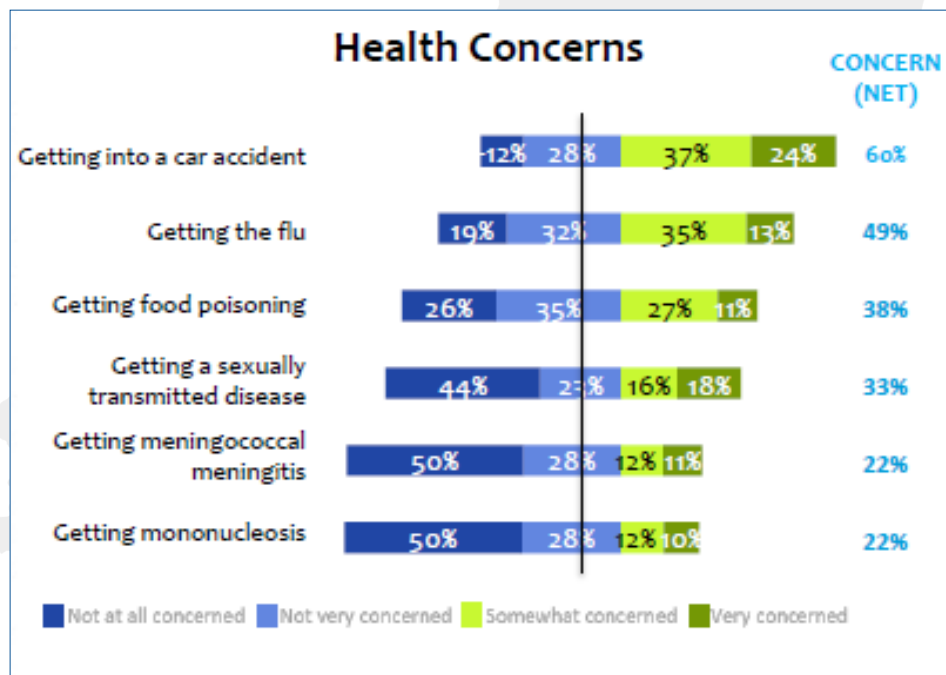

BRAINSTORMING

This section contains ideas and information such as clinical strategies, case studies, potential partnerships, and other possible interventions to increase flu awareness and immunization coverage on campus.

Student Concern Regarding Influenza

A national survey of undergraduate students suggests that 59% of students do not think it is likely that they will get the flu in the next year. That's about **1 out of 2** students.

Source: National Foundation for Infectious Diseases (NFID) nfid.org/infectious-diseases/national-survey-on-college-students-flu/

Student Participation in Influenza Vaccination

A national survey of undergraduate students suggests a combination of education, access, and incentives may help increase flu vaccination on college campuses.

Source: National Foundation for Infectious Diseases (NFID) nfid.org/infectious-diseases/national-survey-on-college-students-flu/

Clinical Updates & Processes

Strategies for improving immunization coverage rates

If your campus health services are able to provide immunizations, the strategies below may help to identify methods to improve immunization coverage rates.

- **Standing orders**—Use standing orders to create vaccine-only visits. This way, the student does not need an individualized physician order for his/her vaccination. Standing orders authorize nurses and pharmacists to administer vaccines to all persons meeting certain criteria. Standing orders include:
 - Protocol to identify patients
 - Procedures to provide information on the risks and benefits of vaccines
 - Process to record refusals or contraindications
 - Approved vaccine delivery protocol
 - Quality assurance and documentation procedures
- **Notify patients**—Send reminder/recall letters, emails, or texts to patients through the New Jersey Immunization Information System (NJiIS) or another system (*See information on NJiIS on next page*). Reminder/recall is a proven strategy to increasing immunization coverage levels ([see case study 2](#)).
- **Use every opportunity**—Use all patient encounters as opportunities to vaccinate, including sick and well visits. Mild acute illness with or without fever is not a contraindication to flu vaccination.
- **Track progress**—Tracking your progress can be beneficial in multiple ways. Having data to describe how well efforts are working can be useful as you adapt your plan and in preparing for future years.
- **Identify vaccination locations**—Especially when there are no vaccination services on campus, put together a list of locations in the community that offer flu vaccination. When possible, list services that provide vaccinations at low or no cost for uninsured and underinsured students. Off-campus immunization services may include: pharmacies, local health departments, clinics, grocery store pharmacies, health fairs, hospitals, cdc.gov/flu/freeresources/flu-finder-widget.html, etc.
 - Talk to participating partners about the challenge and provide them with materials.
 - Encourage them to enter all flu vaccinations administered into NJiIS.

RESOURCES FOR IMPROVING VACCINATION COVERAGE

- ◆ **Tips for improving immunization services:** immunize.org/catg.d/p2045.pdf

New Jersey Immunization Information System

New Jersey's statewide electronic registry

The New Jersey Immunization Information System (NJiIS) is a great tool to assist in increasing immunization rates. NJiIS is the official statewide, web-based registry designed to capture all immunizations administered in New Jersey for all age groups. It provides a centralized location for all immunization records and provides significant advantages for health management by:

- Providing patients, healthcare providers, schools, and child care facilities timely access to complete, accurate, and relevant clinical immunization records.
- Assisting healthcare providers and communities assess immunization coverage and identify areas of need.
- Helping the nation and state meet Healthy People 2030 target immunization rates.

If you are currently registered as an NJiIS user, please continue to log all immunizations in NJiIS, including those administered during the Challenge.

If you are not yet registered and would like to do so, please contact NJiIS at njiis.nj.gov to start the intake process. You may also request read-only access if you would only like to view existing records.

The screenshot displays the NJiIS website interface. At the top, it features the State of New Jersey logo, the text 'STATE OF NEW JERSEY IMMUNIZATION INFORMATION SYSTEM', the NJiIS logo, and the text 'NEW JERSEY IMMUNIZATION INFORMATION SYSTEM'. Below this is a navigation bar with links: Home, Our Mission, On Time Every Time, Contact Us, and Submit a Request. The main content area is divided into three sections: a Bulletin Board with two entries (one dated May 2018 and one dated Apr. 2018), a 'Health Care Providers' section with a list of benefits, and a 'Login' section with fields for 'User Name' and 'Password', a 'Login' button, and a 'Need Login Help?' link. On the right side, there is a vertical menu with icons and labels: 'About NJiIS', 'Enrollment & Training', 'Documents / Forms', 'Interface Enrollment', and a home icon. In the foreground, there is a large white box containing the NJiIS logo, which consists of the letters 'NJiIS' in blue, with two stylized human figures (one male, one female) in blue between the 'J' and 'I'. Below the logo, the text 'NEW JERSEY IMMUNIZATION INFORMATION SYSTEM' is written in green.

Improving Vaccine Accessibility

If you are able to provide immunizations on-campus, convenient times and locations for administering immunizations can help to increase coverage rates. Below are some strategies to improve vaccine accessibility.

Host clinics: Why make students come to you for their flu vaccine? Set up a clinic at a major event (e.g. welcome back events, sporting events, popular study areas, dining areas, etc.) to make it more convenient for students to get their flu vaccine. Several resources are available to help with planning large-scale or off-site flu clinics.

- **Guidelines for Planning**
cdc.gov/vaccines/hcp/admin/mass-clinic-activities/index.html
- **Information for Businesses and Employers**
cdc.gov/flu/business/
- **Tools to Assist Satellite, Temporary, and Off-Site Vaccination Clinics**
izsummitpartners.org/naiis-workgroups/influenza-workgroup/off-site-clinic-resources/

Reduce financial barriers: Students will not want to pay a lot of money out of pocket, so be prepared to help finance the flu vaccine for students. Have a system in place to bill multiple health plans to ensure a variety of healthcare insurance providers are accepted at your facility. You can also provide the option to bill vaccines administered at your facility to students' university accounts.

Easy scheduling: Make time for vaccination! Designate a specific clinic room or area for flu vaccine administration appointments and walk-ins.

Provide educational materials on vaccines: The strongest predictor of vaccination is a strong provider recommendation. Make sure that both providers and students have ample resources available to learn about influenza vaccine, and to make an informed decision. The flu vaccine can also be given with other needed immunizations, such as tetanus, diphtheria, acellular pertussis (Tdap), human papillomavirus (HPV), meningococcal vaccines, or others depending on the student's need ([see case study 4](#)).

Schedule around classes: If possible, schedule around student class times and schedules, and offer a variety of clinic times, including nights and weekends. Clinics scheduled between 9:00 am and 5:00 pm may not be ideal timing for students ([see case study 7](#)).

Some campuses do not have the resources needed to offer immunization services on-campus. If that is the case for you, identify locations near campus that provide those services. Make sure this information is readily available to students. Circulating a list of identified locations will help students in taking the next step towards getting vaccinated.

Communicating Health Messages

Email Blasts: Partner with your university public relation’s team to send blast e-mails to students. This is a great exercise to practice emergency communications messaging capabilities. Use this opportunity to share information about the flu, the Flu Challenge, why students should get vaccinated, where they can get vaccinated, and address cost issues for people who have questions about out-of-pocket expenses.

Newspaper: Does your school have a newsletter or newspaper that is distributed to all students? If so, find out what it takes to write an article for one of these publications and get the message out there about the Challenge and what students need to do to participate (and win!).

Use Online Resources: Use credible videos and websites to create awareness about flu vaccine. Share these widely. For example, you could use the *Mom Knows Best* public service announcement (PSA) showing a college student who gets a visit from mom. View the PSA here: [youtube.com/watch?v=Itb4RfTrmIc](https://www.youtube.com/watch?v=Itb4RfTrmIc). See [additional resources](#) at the end of the toolkit.

Posters: Use existing print materials from the New Jersey Department of Health website (nj.gov/health/cd/topics/flu.shtml), or other sites listed in the additional resources section on [page 35](#) to promote flu vaccination across your campus. Many excellent resources are downloadable and free to use. Hanging posters around campus and in your health center can allow important health messages to reach students and bring their attention to the benefit of the flu vaccine and the flu challenge ([see case studies 3 & 5](#)).

Engage Resident Assistants (RAs): RAs across campus update bulletin boards in residence halls. Provide them with posters and information that they can use to decorate their boards during the flu season.

- *Web Tools*

Addressing Myths

Listed below are a few of the common myths surrounding influenza immunization. It may be beneficial to address some of these common myths during your campaign.

Myth	Fact
I will get the flu from the vaccine.	The vaccine can't give you the flu. The flu vaccines given with a needle do not contain live viruses. If a person experiences flu-like illness following vaccination, it could be a non-flu cold virus or other illness.
Healthy people don't need to be vaccinated.	Everyone six months and older should be vaccinated. Getting the flu shot can also help prevent people from spreading the virus to others. Even healthy people are at risk from getting the flu. Getting the flu may lead to missing class, work, or other obligations.
I don't need a flu shot every year.	The influenza virus has the ability to change and mutate each year. Vaccines are developed each year to attempt to match the strains that are likely to circulate in the coming year. You need a flu shot each year to make sure that you have the best protection possible against the flu.
I can't get that sick from the flu.	Even among healthy people, the flu can cause serious complications. During the 2019-2020 flu season in the U.S., there were an estimated 35.5 million influenza illnesses, 16.5 million influenza-associated medical visits, and 490,600 influenza-related hospitalizations, and 34,200 deaths from influenza. Getting vaccinated also helps you to protect others from the flu. Having a relatively mild case of the flu still means that you can expose others in the community.
The flu vaccine does not work.	In the 2019-2020 influenza season, an estimated 4.4 million illnesses , 58,000 hospitalizations , and 3,500 flu deaths were prevented by flu vaccination. ¹

Additional Resource!

CDC webpage to address common misconceptions about the flu.

[cdc.gov/flu/pdf/freeresources/general/no-excuses-flu-vaccine-print.pdf](https://www.cdc.gov/flu/pdf/freeresources/general/no-excuses-flu-vaccine-print.pdf)

² [cdc.gov/flu/vaccines-work/averted-estimates.htm](https://www.cdc.gov/flu/vaccines-work/averted-estimates.htm)

Social Media

Engage campus leaders: Campus leaders such as the President, football coach, or school mascot can have a large social media reach. Ask them to tweet about the Challenge or provide them with a sample message they can post or tweet to help encourage students to get vaccinated.

“Don’t miss the action this season! #GetVaccinated to #FightFlu”

#NJFluChallenge

Engage Greek life: Student leaders in Greek life can also have a vast social media reach. Asking them to post about the Challenge can spread the word to a large group of students.

Hashtags: Create a hashtag that is specific to your campus and the Challenge. You want consistency among posts about the flu challenge so branding a hashtag that is specific to your school will help increase usage of the hashtag ([see case study 6](#)).

Engage users: Create a selfie competition on your campus and have students send in selfies of places they go after they get their flu shot. The most creative post can win a prize! Or you could give those who receive the flu vaccine on-campus special Band-Aids that they can use in their selfies to help spread awareness about the importance!

Engage interns: This would be a great project for an intern to work on. They know what their peers are reading on social media, and can help craft creative posts that will resonate with students on your campus.

CDC SOCIAL MEDIA

CDC has many examples of how you can use social media to engage users for your health campaigns. Their website has many ideas that you can use, or adapt specifically for your campus flu vaccination campaign. Get creative!

Social Media at CDC: [cdc.gov/socialmedia/](https://www.cdc.gov/socialmedia/)

Social Media Toolkit: [cdc.gov/flu/resource-center/toolkit/social-media-toolkit.htm](https://www.cdc.gov/flu/resource-center/toolkit/social-media-toolkit.htm)

Personal Stories

Presenting personal stories can help to emphasize the importance of annual flu vaccination. People of all ages have been affected by influenza illness and mortality across the United States. Bringing attention to some of those stories may help students to relate to the individuals in those stories. Check out the links below for resources documenting personal stories through both written narratives and videos.

Why get a flu vaccine?
Ask Niko Yaksich of Michigan.

Even healthy people can get the flu and it can be very serious. This year and every year, get vaccinated against the flu. It could save a life.

Niko's story

In 2003, I lost my sister Alana to the flu. She was a perfectly healthy 5-year-old girl, and in the blink of an eye she was gone. The day that she passed away she had woken up with a fever and was feeling a little under the weather, but by the end of the day she was feeling much better and was running around with me. It was as though she had never been sick and was back to normal. She was not back to normal though. As I slept that night, my sister was being rushed to the hospital with a fever of 106 degrees. The doctors said that there was nothing they could do and that the flu had caused swelling to her brain. By the following night I had lost my sister and my family's life would be changed forever.

MICHIGAN DEPARTMENT OF HEALTH SERVICES | www.aimtoolkit.org | www.alanasfoundation.org | ALLIANCE FOR IMMUNIZATION IN MICHIGAN

Concept adapted with permission from Texas Children's Hospital.

Why get a flu vaccine?
Ask the Yaksich family of Michigan.

This year and every year, make sure you and your loved ones are vaccinated against the flu. It could save a life.

Alana's story

On February 2, 2003, 5½-year-old Alana Yaksich spent the day with her parents and brothers watching movies, eating, sunbathing and playing. Even with a low-grade fever from a recent sore throat, Alana enjoyed the afternoon feeling healthy and surrounded by her family. That evening, Alana was rushed to the emergency room when her fever increased to 106 degrees. Within 24 hours of arriving at the local hospital, Alana died of flu-related complications that caused swelling and injury to her brain.

Flu is a serious disease that can be prevented through vaccination. Annually an average of 20,000 young children are hospitalized because of the flu.

In a recent mild flu season, 120 children in the United States died of the flu, of which half were previously healthy, just like Alana.

MICHIGAN DEPARTMENT OF HEALTH SERVICES | www.aimtoolkit.org | www.alanasfoundation.org | ALLIANCE FOR IMMUNIZATION IN MICHIGAN

Concept adapted with permission from Texas Children's Hospital.

Why get a flu vaccine?
Ask the McCormick family of Michigan.

Even healthy, young adults can get the flu, and it can be very serious. This year and every year, get vaccinated against the flu. It could save a life.

Ashley's story

Ashley McCormick was a 23-year-old nanny. She came home from work on December 20, 2013, with a runny nose, sore throat, and headache. The next day she had a high fever and went to urgent care. Her positive flu result came too late for Ashley to be treated. She started to feel better, but on Christmas her fever was 103.8 degrees. The next day she went to the emergency room with pneumonia. Ashley had H1N1 flu and quickly became very sick. On December 27, Ashley died from the flu. Ashley's life may have been saved if she had been vaccinated.

Family Stories

In this section, you will be touched by the emotional stories of families who have been altered by the flu. A diverse range of families from across the U.S. have been touched by the loss of a child from the flu or by a child who has experienced medical complications who have banded together to heal.

Here you'll learn about a four-year-old girl who went to bed with mild flu-like symptoms, a month-old baby boy who died only 30 hours after showing his first symptoms, and a healthy 15-year-old who, after baseball team tryouts, began to show flu-like symptoms. Sadly, these cases are only a few of many you will read about.

Read about our children by clicking on their names to the left of this page.

Internal Competitions

1. **MAJORS/SCHOOLS**— Do you have contacts with Deans from different majors at your school? If so, start a competition between majors. These groups of students take classes together, study together, and research together. This provides an opportunity to communicate with a large group of students at once. Students do not have time to be sick—a flu shot can help keep them healthy!
2. **RESIDENCE HALLS**— Work with campus housing to disseminate information on flu awareness to all dormitories. Students living in close quarters can be at increased risk of getting the flu and spreading the disease. If there is the possibility for mobile vaccination clinics, they can help to coordinate a date for vaccination of students within or near dorms to make vaccination more accessible.
3. **CAMPUS ORGANIZATIONS**— Connecting with on-campus groups can help your message reach a large number of students without reaching out to them individually. Also, be thinking about what support you need. A student in communications, health education, or another major might be interested in an internship opportunity focused on implementing some of these ideas, and spreading the word about the importance of flu vaccine.
4. **ATHLETIC TEAMS**— Athletes are competitive, and love the chance to win. Build a flu vaccination competition between athletic teams on your campus, and work with coaches and staff to measure how many athletes get vaccinated. Athletes can make up a significant portion of students, and are great leaders to engage in helping spread the word about the importance of flu vaccine. A flu shot can help keep student-athletes in the game!

Connecting with Partners

Ideas for both on- and off-campus partnerships

On-Campus Partners

<p>Student Groups</p> <p>Encourage student groups to come up with their own ideas for the campaign. Allow them to be involved in setting up and promoting events. Peer endorsements have often been a successful factor in motivating students to get vaccinated.</p>	<p>Greek Life</p> <p>Fraternities and sororities on campus can be great resources to help spread the word to a large campus population. Contact your campus Panhellenic Council about communication channels you can use to reach all Greek students.</p>
<p>Nursing School/Public Health</p> <p>Does your campus have a nursing program or public health degree? You can work with these schools to host clinics, train nurses on how to give vaccines, or have them communicate within their circles the importance of vaccination (see case study 1).</p>	<p>Communications</p> <p>Engage students through current campus communication and public relations initiatives. Work with the Communications team to post on the college/university-wide social media pages. What about your school's newspaper, radio, or other existing channels?</p>

Community partners

Identifying off-campus partners

Contact community partners to identify locations where students may be able to get vaccinated. Encourage those locations to promote the challenge by posting flyers and other information. If your campus cannot offer immunizations, some partners may be able to conduct mobile health clinics.

- Pharmacies**
- Local Health Departments**
- Hospitals**
- Get creative!** Partner with local sports teams, radio stations, TV stations, news channels, movie theaters, bowling alleys, etc. Some partners may be able to help draw attention to campus events, provide incentives, or participate in other ways.

Incentives!

Providing incentives to student groups you work with on campus can be very motivating. That may include gift cards, iPads, sporting event tickets, etc. Often, grants to purchase these incentives are available through various corporations.

Case studies from Michigan

This version of the toolkit features experiences from Michigan, where a similar challenge has been implemented successfully for the past four years. Next year, we hope to be able to feature additional case studies from New Jersey as well as those from other states.

1-Calvin College: Nursing Students as Campus Advocates

Calvin College engaged nursing students to be influencers on campus, and they also used it as a training opportunity. “Nursing students helped provide flu shots at each flu clinic as a part of their clinical skills course.” They also invited friends to the clinics, and were campus advocates for the flu shot.

2-Wayne State University: Electronic Health Record (EHR) Utilization

Wayne State University used their electronic health system to alert staff to ask every patient who came in about getting the flu vaccine. This EHR acted as a reminder for staff to ask about flu vaccine so that no one would forget to ask the student if they had received the vaccine yet. Using clinical strategies to optimize processes can be an effective way to increase the number of students getting vaccinated.

3-Hope College: Branding and Marketing Flu Vaccine Efforts

Hope College branded their flu campaign “Flunado”, and created posters that read “Stop Flunado: Get vaccinated now!” By creating a theme for their efforts to vaccinate students, they help create awareness around the challenge, and were consistent in their messaging. These posters also included information about an incentive they were offering to students: a drawing to win one of four Fitbits for any student who got their flu vaccine. Incentivizing students can be an effective way to get more students into health clinics to get their flu shot. Also consistent messaging is important. Using branding terms such as “Flunado” can help with recognition of the campaign, and awareness of the efforts on campus.

4-Michigan State University: Support Vaccination Staff

Michigan State University incentivized their staff to vaccinate more students with the flu shot. The person on staff who had the most flu vaccinations in the season won a prize. This strategy can encourage staff to make a recommendation for the flu vaccine to every student who uses the clinic’s services. There are many ways to encourage students to get the flu vaccine— clinic staff are partners you will want to engage!

Case studies from Michigan, *continued*

5-Wayne State University: Posters that Encourage Competition

Wayne State University created their own marketing materials that encouraged the competition between schools who were participating in the challenge. It is a good idea to create posters that are specific to campus activities, which show that efforts were made to personalize the campaign which will interest more students. The poster that Wayne State University created included information about completing the student self report survey. Not all students who receive their flu shot will get them at the college health clinic, so it is a good idea to market the self-report survey on posters and other materials so that all students can complete the survey and have their flu shot count towards the overall competition!

6-Penn State University: Social Media Campaign

Penn State University was not a part of the Michigan College Flu Challenge, but they have a great social media campaign for flu vaccination. They use the hashtag #PSUFluFight. Personalizing the hashtag specifically to your campus will help to engage more students. Penn State also encouraged students to take selfies to post with the hashtag, and challenge friends through social media to get the flu vaccine.

7-University of Minnesota: Guinness World Record

University of Minnesota was not a part of the Michigan College Flu Challenge, but they have challenged students to get vaccinated to help break the Guinness World Record (2008) for the highest number of vaccinations in one day, which led to over 11,000 vaccinations. They also use the idea of students being a part of the herd, and talk about protecting the herd by getting the flu vaccine.

Other Ideas...

1. Student competitions to create posters, flyers, radio PSAs, video PSAs.
2. Themed campus events to promote flu vaccination (sporting events, concerts, holidays, etc.)
3. Bathroom stall campaigns. Post flu vaccine information in bathrooms around campus.
4. Create an influenza march or parade with the school band. Invite prominent campus figures to participate.
5. Place challenge information in the napkin holders in the dining halls.

INTERACTIVE CAMPAIGN PLANNING MATERIALS

Interactive forms to help you start planning. Begin identifying specific activities, groups, dates, and other ideas to implement during your flu campaign.

Step-by-Step Planning

Developing your ideas

STEP 1: GATHER YOUR TEAM

Get together with a group of partners. Take a look at the information on [page 5](#) to brainstorm who would be good team members (e.g. Greek life, communication team, student health and wellness, nursing program contacts, resident life, etc.). Make sure to engage your students as well to help spread the word about the competition.

Notes:

STEP 2: CREATE A PLAN

Using the toolkit to guide your plan, lay out exactly what steps you are going to take to increase vaccination coverage. There are many ideas, but we know that not all of them may be feasible for you. Pick a few ideas that work for your institution and execute them well.

Notes:

STEP 3: ASSIGN TASKS

While you have your team together, divide the plan into tasks for each person and set deadlines for people to stick to. Check in regularly with teammates to ensure accountability.

Notes:

STEP 4: IMPLEMENT & MONITOR

Monitor how things are going as your team makes progress. If something isn't working, change it. Individualizing your plan to your campus will produce the best results. Remember, the way to win the challenge is to get students talking about flu prevention and taking the survey!

Notes:

STEP 5: INCREASE VACCINATION COVERAGE ON CAMPUS!

Focus on the outcome! The overall goal of this campaign is to increase vaccination coverage and create a healthier campus.

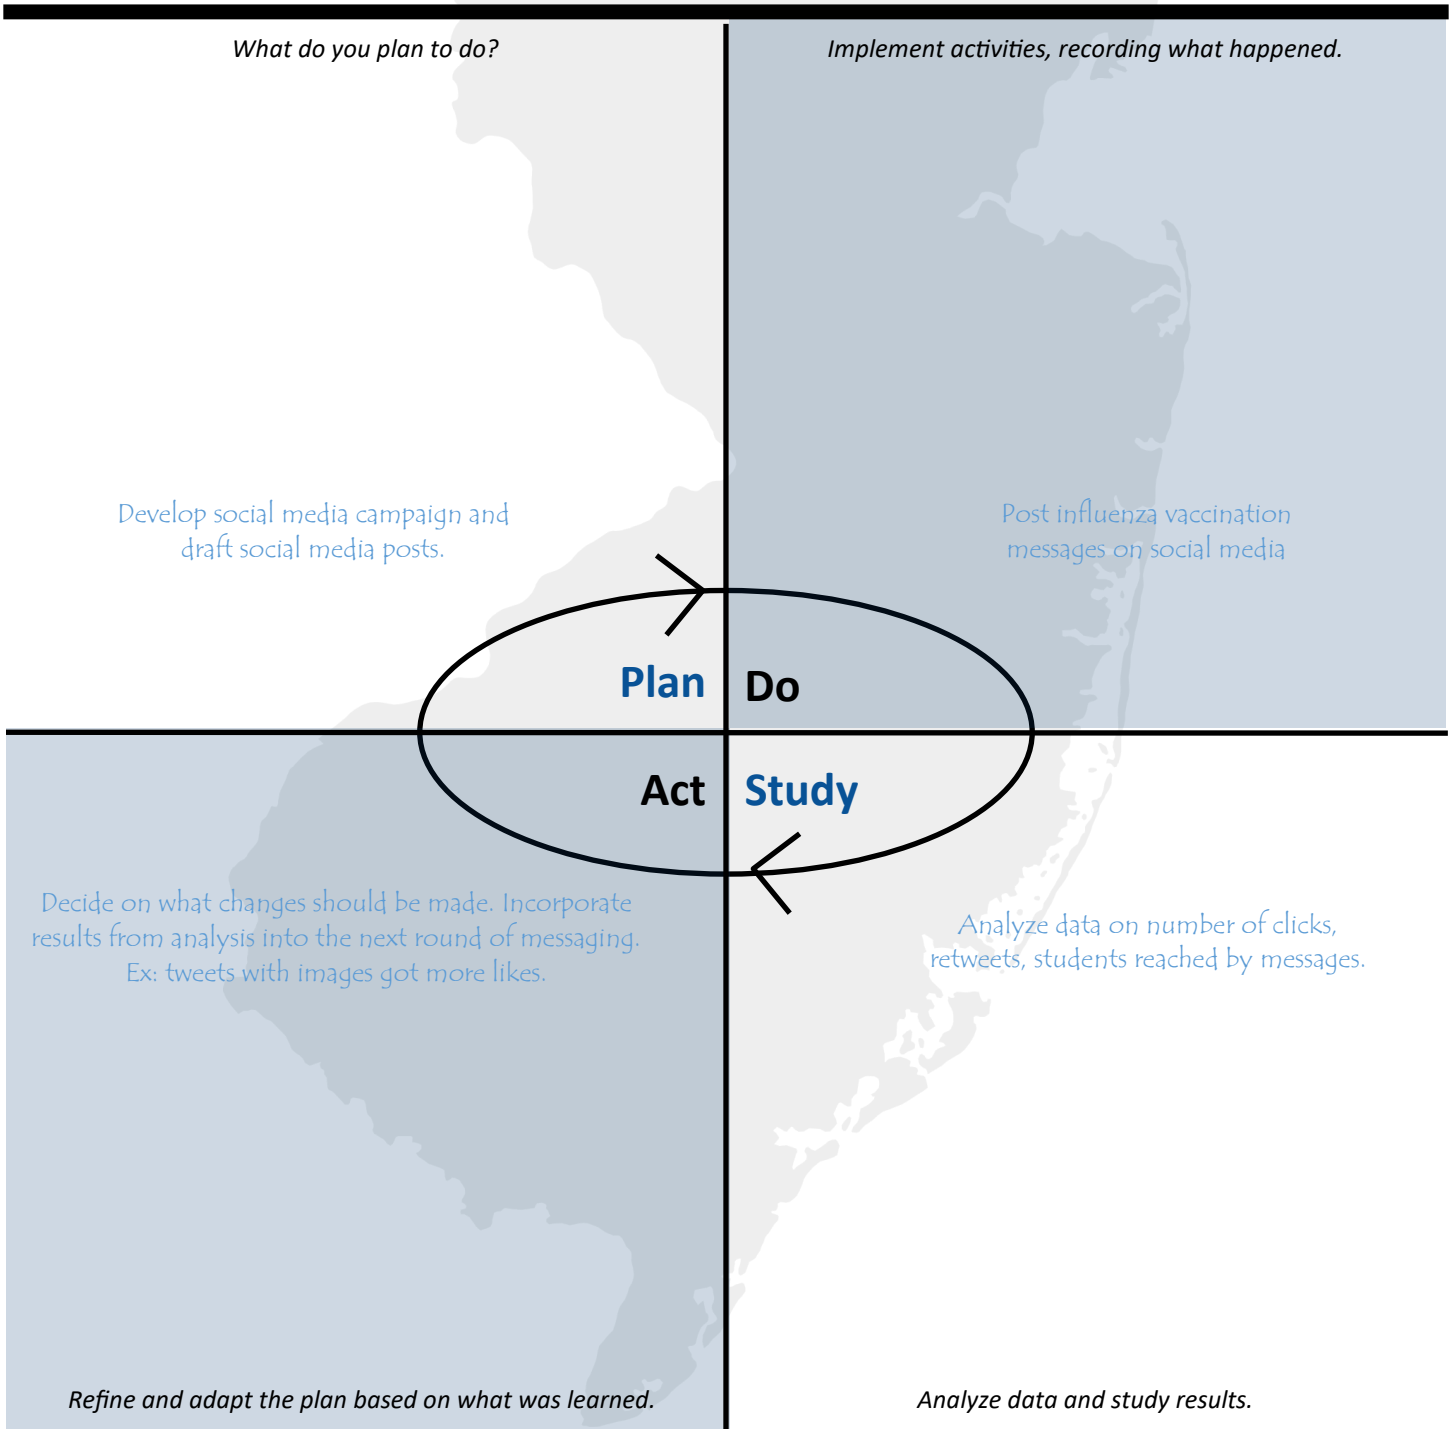

Notes:

Mapping out your plan

Writing out your plans will help keep you on track throughout the flu season. You can use the diagram below to list out ideas and goals for your campus flu vaccine campaign this year.

Goals:

Identify Challenges and Develop Solutions

College students have many competing priorities, which can present a challenge to reinforcing the need for their annual seasonal flu vaccination. Use the table below to list out some of the challenges that you have experienced, and identify some solutions to help overcome those challenges and to help develop a more targeted campaign.

Challenge	Solution
Low perceived-risk by students	<ul style="list-style-type: none"> • Disseminate messages describing the risk and results of flu infection. <ul style="list-style-type: none"> ◊ Flu can circulate rapidly due to lifestyle on campus (dorms, classrooms, shared restrooms, social activities, etc.). ◊ Students who get the flu average up to 8 days or more of illness.
Limited funds to get vaccination	<ul style="list-style-type: none"> • Messaging: getting the flu can cost more than the vaccination. • Promote list of locations that offer low-cost or free vaccination.
Lack of/limited availability of access to vaccination on campus	<ul style="list-style-type: none"> • Look to partner with pharmacies, hospitals, clinics, grocery stores, or other locations that offer immunizations during the flu season. • Increase clinic hours to more accessible times.
Busy schedule/competing priorities	Conduct immunization events at varying times and convenient locations.
Don't believe the vaccine is effective	<ul style="list-style-type: none"> • Use campaigns to dispel myths about flu vaccine. • Offer resources for students to educate themselves, especially through electronic methods (social media, videos, etc.) • Use data to support vaccine effectiveness.
Others? List some challenges that you have experienced with flu immunization and try to identify solutions that can be incorporated into your campaign.	

Template Messages

-  **Vaccination is the first and most important step to protect against the flu.** Everyone ages 6 months and older should get a flu vaccination each year to protect themselves and their loved ones against the flu.
-  **The flu is serious.** The flu is a contagious disease which affects the lungs and can lead to serious illness, including pneumonia. Even healthy people can get sick enough to miss work or school for a significant amount of time, or even be hospitalized. The close-contact environment that college students live in can often lead to the rapid spread of influenza, so it is important for students to get their flu shot.
-  **The flu vaccine cannot give you the flu.** The vaccine is either made with an inactivated virus, or no virus at all. The most common side effects from a flu shot are a sore arm and sometimes a low fever or achiness. If you do experience them at all, these side effects are mild and short-lived.
-  Flu seasons are unpredictable. They can begin early in the fall and last late into the spring. **As long as flu is in the community, it's not too late to get vaccinated, even during the winter.** If you miss getting your flu vaccine in the fall, make it a New Year's resolution– flu season doesn't usually peak until January or February and can last until May. The flu vaccine offers protection for you all season long.
-  **The minor pain of a flu shot is nothing compared to the suffering that can be caused by the flu.** The flu can make you very sick for several days, send you to the hospital, or worse. The flu shot can keep you from catching the flu. So, any discomfort you may feel from the flu vaccine is worth it to avoid the flu.
-  **Flu vaccines are safe.** Flu vaccines have been given for more than 50 years and they have a very good safety record. Hundreds of millions of flu vaccines have been given safely.

Write in some of your own!

Template Social Media Posts

✎ Flu vaccine is now available! Make your appointment at [your health center's website] and stop by health services to #GetVaccinated

✎ The best defense is a good offense. #GetVaccinated to #FightFlu

✎ College #lifehack: Get your flu vaccine early to provide you with protection the entire season #FightFlu

✎ Studies show immunity decreases as stress increases...let flu be one less worry during the semester #GetVaccinated

National Flu Campaigns

Be on the lookout for national flu campaigns, which may provide additional ideas and educational materials.

The CDC and the National Foundation for Infectious Disease also host events to kick-off the start of flu vaccination season with webinars, social media, and other events.

Each year, the CDC hosts National Influenza Vaccination Week to highlight the importance of vaccination through the holiday season. cdc.gov/flu/resource-center/nivw/activities.htm

Write in your own tweets, posts, hashtags, etc. here!

Calendar of Events

Use the calendar below to plan out events that take place on your campus by writing events next to the blank bullet points. Try using a different theme for each month related to holidays or other ongoing events.

Month	Activity	Details
August	<ul style="list-style-type: none"> • Challenge enrollment (rolling) • New Jersey’s Adult Vaccine Preventable Disease Awareness and Improvement Month • National Immunization Awareness Month • 	Link to self-report survey will be distributed
September	<ul style="list-style-type: none"> • Challenge Kick-Off • CDC/NFID Flu Season Campaign Kick-off • 	
October	<ul style="list-style-type: none"> • National Health Education Week • Halloween-themed messaging • 	
November	<ul style="list-style-type: none"> • Highlight the importance of vaccination for persons with chronic conditions • American Diabetes Month • COPD Awareness Month • Lung Cancer Awareness Month • Thanksgiving-themed messaging 	
December	<ul style="list-style-type: none"> • 1st week in December: National Influenza Vaccination Week • Close of NJ Flu Challenge—Dec 31st 	Coordinate campaign activities with CDC promotional messages for the week.
January	<ul style="list-style-type: none"> • 	
February	<ul style="list-style-type: none"> • 	
March	<ul style="list-style-type: none"> • Results Announced 	Debrief with all participating schools

INFLUENZA PLANNING DURING THE COVID-19 PANDEMIC

The COVID-19 pandemic continues as we head into the 2021-2022 flu season. Influenza vaccination will continue to be important in decreasing the overall impact of respiratory illnesses by reducing influenza-associated illnesses, hospitalizations, and deaths, and reducing the burden on the healthcare system. The following materials are specific to flu vaccination promotion during the pandemic.

Immunization Action Coalition (IAC)

<https://www.immunize.org/catg.d/p3115.pdf>

Communicating the Benefits of Seasonal Influenza Vaccine during COVID-19

Influenza (flu) severity varies from year to year, but flu always brings serious consequences.¹ The prevention of influenza and its associated consequences is important every year. Although the effectiveness of the flu vaccine can vary, overall the vaccine markedly lowers the risk of influenza-related illness, hospitalization, and death.²

The COVID-19 pandemic means preventing influenza during 2020–21 is more important than ever. Influenza and COVID-19 share many symptoms. Preventing influenza means fewer people will need to seek medical care and testing for possible COVID-19 or influenza. And increasing flu vaccination uptake saves healthcare resources for COVID-19 and other conditions. Begin recommending flu vaccine now, and vaccinate throughout the flu season, providing extra outreach to those at highest risk of severe COVID-19 or severe influenza.

CDC estimates that, from October 1, 2019–April 4, 2020, there were:

What are the Benefits of Seasonal Flu Vaccine?

Research shows flu vaccination:

Reduces Hospitalization and Death

- ✓ Pediatric deaths from flu were cut in half for children with underlying high-risk medical conditions and by two-thirds for healthy children³
- ✓ Influenza hospitalizations were cut in half for all adults (including those 65+ years of age)⁴
- ✓ Influenza hospitalizations dropped dramatically among people with chronic health conditions – by 79% for people with diabetes⁵ and 52% for those with chronic lung disease⁶
- ✓ Vaccinating long-term care facility (LTCF) staff reduces hospitalizations and deaths in LTCF residents⁷

Reduces Severity of Illness in Hospitalized Individuals

- ✓ Among adults hospitalized with flu, intensive care unit (ICU) admissions decreased by more than half (59%), and fewer days were spent in ICU if vaccinated⁸
- ✓ Children's risk of admission to a pediatric intensive care unit (PICU) for flu-related illness was cut by almost 75%⁹

Reduces Risks for Major Cardiac Events

- ✓ Risk of a major cardiac event (e.g., heart attack) among adults with existing cardiovascular disease was reduced by more than one-third¹⁰

Protects Pregnant Women and Their Babies

- ✓ For pregnant women, flu-associated acute respiratory infections were cut in half¹¹, and flu-associated hospitalizations were reduced by 40%¹²
- ✓ Influenza illnesses and influenza-related hospitalizations in infants under 6 months of age fell by half when their mothers were vaccinated^{13,14}

www.immunize.org/catg.d/p3115.pdf • Item #P3115 (7/20)

Vaccination rates¹⁵ remain well below optimal levels:

- 63% children 6 months–17 years
- 45% adults 18+ years
- 68% adults 65+ years
- 81% healthcare personnel
- 54% pregnant women

¹⁵Estimates from the 2018–19 influenza season. Source: CDC FluView

How to Discuss Vaccine Effectiveness Tips

- **Keep it simple:** “Flu vaccine helps reduce risk of hospitalization and death.”
- **Use a presumptive approach:** “Today we are giving you your annual flu vaccination.”
- **Communicate why we vaccinate:** “Vaccination prevents flu and severe outcomes of flu.” “Preventing the flu also means preventing missed work and helps you avoid doctor appointments and unnecessary medications. It also means preventing flu symptoms that can mimic COVID-19, saving healthcare resources needed for COVID-19 care.”
- **Communicate the variability and unpredictability of flu:** “This is why it is best to get an annual flu vaccination.”
- **Acknowledge that flu vaccination is not always a perfect match with the circulating virus types. But flu and flu-related severe illnesses are common: outbreaks occur almost every year.** “The vaccine is the best way to reduce your risk of flu and its negative outcomes.”

Additional COVID-19 Resources

To address the importance of influenza vaccination, especially during the COVID-19 pandemic, CDC will maximize flu vaccination by increasing availability of vaccine, including purchasing an additional 2 million doses of pediatric and 7 million doses of adult flu vaccine, by emphasizing the importance of flu vaccination for the entire flu season which extends into the end of March (particularly since flu vaccination typically drops off by late November), and by conducting targeted communication outreach to specific groups who are at higher risk for complications from flu.

The following resources pertain to flu vaccination during the 2022-2023 flu season.

[NJDOH] [New Jersey COVID-19 Disease Page](#)

This page features links to all NJDOH COVID-19 guidance and daily case summaries.

[CDC] [Guidance for Planning Vaccination Clinics Held at Satellite, Temporary, or Off-Site Locations](#)

This guidance primarily focuses on clinical considerations for planning a vaccination clinic, including vaccine storage, handling, administration, and documentation.

[CDC] [Flu Vaccine Finder](#)

This web widget allows users to enter their zip code to locate vaccine providers in their area.

[CDC] [Recommended Adult Immunization Schedule for ages 19 years or older, United States](#)

The immunization schedule provides a detailed look at routine vaccination schedules, schedules for those with medical indications, and additional notes for each recommended vaccine.

[CDC] [Influenza Preventive Steps](#)

This page provides detailed information for the general public on how to prevent influenza infection. Steps include vaccination, everyday preventive actions, and following doctor's recommendation for antivirals if recommended.

[Immunization Action Coalition] [Handouts for Patients and Staff](#)

These IAC resources cover a broad array of immunization topics from individual vaccines to vaccine administration and storage and handling.
