# **New Jersey Chartbook of Substance Abuse Related Social Indicators**

## **SALEM COUNTY**

### **November 2016**

# Acknowledgements

We wish to gratefully acknowledge the contribution of public agencies for providing us with archival data on which this study is based. The selection of indicators, the collection and presentation of data, and the specific notes on interpretations were developed through a collaborative effort between Rutgers School of Social Work, the New Jersey Division of Mental Health and Addictions Services (DMHAS), and the New Jersey State Epidemiological Outcomes Workgroup (SEOW). We would like to thank the Rutgers School of Social Work team who worked on this Chartbook project: Sangeeta Chatterji, MSW, Fiona Conway, Ph.D., Sarah Gold, MSW, Kelly Hennebry, Clare F. Neary, M.S., Evalyne Kerubo Orwenyo, MSW, N. Andrew Peterson, Ph.D., Kristen Gilmore Powell, Ph.D., and Yuqi Wang, MSW. We would also like to thank DMHAS and SEOW members who assisted in the planning for these Chartbooks and helped us obtain data.

This Chartbook was developed under the Partnerships for Success grant, awarded by the Substance Abuse and Mental Health Services Administration (SAMSHA), U. S. Department of Health and Human Services (HHS) to DMHAS and sub-contracted to Rutgers School of Social Work.

# Report Organization Table of Contents

The Chartbook includes four main chapters: *The State Profile of Social Indicators*, *County Profile of Social Indicators*, *Municipal Profile of Social Indicators*, and *Municipal Charts of Social Indicators*. The organization of the Chartbook aligns with the work that many coalitions and agencies are undertaking within the Strategic Prevention Framework (SPF).<sup>1</sup> These domains, such as consequences and root causes, are elements of the SPF and other public health or science-based models guiding substance abuse prevention efforts.

Selected indicators are displayed using thematic maps, charts and tables accompanied with brief descriptive text. The maps display patterns of specific health indicators of each county and the tables provide recent, as well as trend data on selected indicators.

## **Chapter One: The State Profile of Social Indicators**

Chapter 1 provides a summary of the state's population. The charts, tables, and graphs in this section reflect state-level social indicators including: population changes from 1990 to 2013; the age, gender, race, and ethnicity compositions of the population; crime, including alcohol- and drug-attributable incidents; and detailed information on substance abuse treatment admissions.

## **Chapter Two: County Profile of Social Indicators**

Chapter 2 provides county-level information. This chapter provides similar information as Chapter 1 but at the county-level. The charts, tables, and graphs in this section reflect county-level social indicators including: population size and household income; crime, including alcohol- and drug-attributable incidents; and detailed information on substance abuse treatment admissions.

## **Chapter Three: Municipal Profile of Social Indicators**

Chapter 3 provides a profile of social indicators at the municipal level, across the state. The chapter begins with a summary statistics table of key indicators across the state. The chapter also includes data on race and ethnicity, poverty, and income; substance abuse treatment admissions at the municipal level; and alcohol- and drug-attributable crime at the municipal level.

## **Chapter Four: Municipal Charts of Social Indicators**

Chapter 4 is comprised of detailed charts and data for each municipality in the county. The data presented for each municipality includes population statistics (population density, population change median household income, unemployment rate, education rate, cash assistance receipt, fertility, age distribution, and race/ethnicity) along with substance abuse treatment admissions, alcohol- and drug-attributable crime, and alcohol and tobacco retail availability.

## **Appendix A**

Appendix A presents the county-level raw data associated with the data summaries presented throughout the Chartbook. These raw data tables can be used for prevention and treatment

---

<sup>1</sup> For more information about the SPF, please see the introduction section on page 1.

planning and are grouped according to the definitions used by Community Anti-Drug Coalitions of America (CADCA) and the SPF in the types of data that are useful for community coalitions and prevention agencies to use in needs assessment planning. These include consequences of substance abuse; substance abuse problems; root causes of substance abuse; local conditions; and demographics.

## **Appendix B**

Appendix B presents the municipal-level raw data associated with data summaries presented throughout the Chartbook. These raw data tables can be used for prevention and treatment planning and are grouped according to the definitions used by Community Anti-Drug Coalitions of America (CADCA) in the types of data that are useful for community coalitions and prevention agencies to use in needs assessment planning. These include consequences of substance abuse; root causes of substance abuse; local conditions, family structure, school environment, substance abuse related problems, and demographics.

## **Appendix C**

Appendix C contains a full list of references as well as descriptions and calculations for all of the data contained within the Chartbook. This appendix is to be used in conjunction with the data presented in the Chartbook to detail both the source of the data and how indicators were calculated. Appendix C also provides critical details about the conceptualization and measurement of the variables throughout the Chartbook.

# Introduction

Assessing the well-being of community health through social indicators has been a long-standing concern to the Substance Abuse and Mental Health Services Administration (SAMHSA). To meet this objective, SAMHSA has encouraged the use of social indicators to assess social and health risks related to substance misuse in order to inform policy makers. Following the social indicators core protocol guidelines provided by SAMHSA, the Division of Mental Health and Addiction Services (DMHAS) developed this Chartbook of substance abuse related social and health indicators in the state of New Jersey. The first set of Chartbooks was published in 2003. This current edition is an update to the 2012 edition.

The Social Indicators Chartbook is intended to identify social and health problems directly or indirectly related to substance use and to aid in the assessment of needs for treatment and prevention services. This is achieved, in part, by using key social indicators outlined in the core protocol by SAMHSA, and by identifying risk and protective factors affecting health outcomes. Summary analysis of the core indicators is presented using census data, criminal justice data and substance abuse treatment admissions data. Additional indicators were identified using guidance from three sources: 1.) The U.S. Department of Health and Human Services Substance Abuse and Mental Health Services Administration's Risk and Protective Factors for Mental, Emotional, and Behavioral Disorders Across the Life Cycle; 2.) The Community Anti-Drug Coalition's (CADCA) Assessment Primer: Analyzing the Community, Identifying Problems and Setting Goals; and 3.) CADCA's Community Assessment Needs Assessment Data Collection Examples of Local Data worksheet. These documents rely on the Center on Substance Abuse Prevention's (CSAP) Strategic Prevention Framework to guide the identification of individual, family, and community factors that are related to substance abuse.<sup>2</sup> Additionally, CADCA's Assessment Guide is specifically concerned with aiding community coalitions during the needs assessment process and in identifying communities to target for prevention initiatives and the organization of the county and municipal social indicators follow CADCA's conceptualization of domains useful in prevention planning.

The specific objectives of the Chartbook are to:

- Provide information to support needs assessment and prevention, as well as treatment planning, at the community level.
- Present a comprehensive profile of New Jersey at the state, county, and municipal levels using key social indicators related to substance abuse. The Chartbook incorporates indices of core indicators based on historical data sources on population, arrests, and substance abuse treatment admissions. In addition, indicators of risk and protective factors that affect health outcomes are presented for each county and the State.
- Show health and public safety consequences in New Jersey at the state, county, and municipal levels.

# **Population Profile**

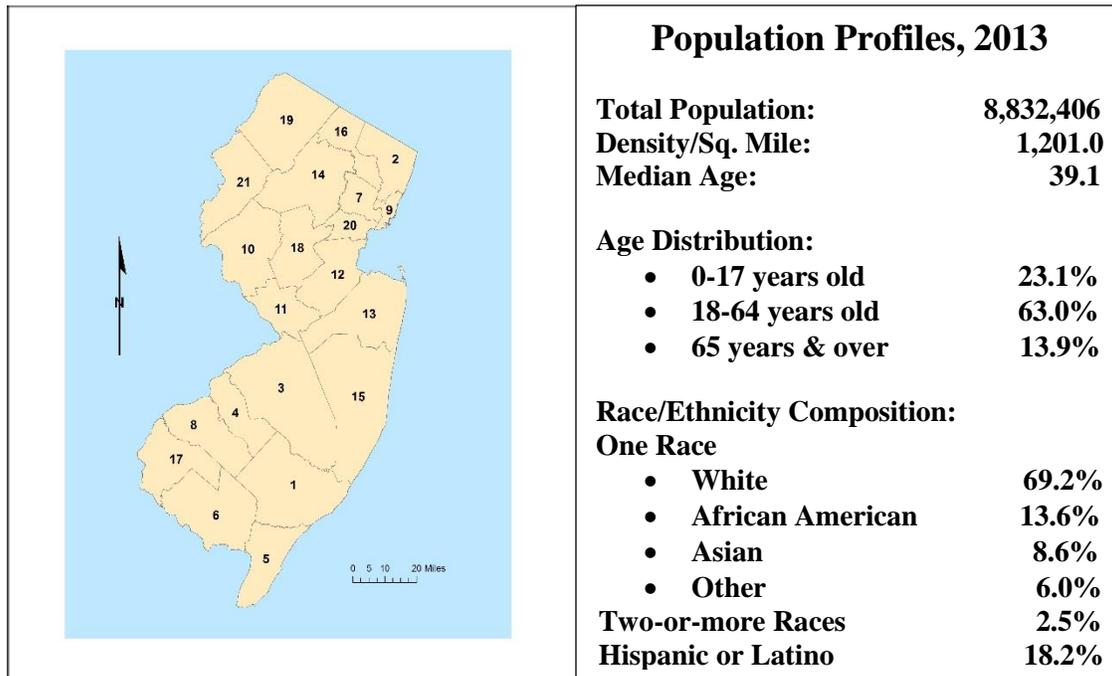

## **Introduction**

This section describes the population characteristics of New Jersey in order to provide a context for analyzing and interpreting the social indicators that have potential effects on health status, treatment needs, and type of treatment services provided. Population characteristics are of fundamental importance in estimating prevalence rates and in age-adjusting data when comparing indicators across counties. Data on population change, gender, age, race, and ethnicity are obtained from the 2000 and 2010 decennial United States Census and 2013 American Community Survey 5-year estimates.

### **General Profile of Census Population Data & Population Estimates**

- Population Growth (2000-2013)
- Age Structure
- Population Distribution by Age
- Population Distribution by Age and Gender
- Population Distribution by Race and Hispanic Origin

## Population Growth, New Jersey (1990-2013)

No.	County	Total Population			Percent Change		Density/Sq.Mile (2013)

## Population Growth

According to the 2013 American Community Survey 5-year estimates, New Jersey's total population reached 8,832,406 people, which makes it the 11<sup>th</sup> most populous state in the United States. The increase of 40,512 residents in the state since the 2010 Census represents a lower rate of annual growth (0.2%) than that from 2000-2010 (0.5%).

From 2000 to 2013, the state had a slightly slower population growth compared to the national rate and its share of the nation's population declined from 3.0% in 2000 to 2.8% in 2013. Despite slower growth during this period, New Jersey remains the most densely populated state in the US with 1,201 people per square mile.

From 2010 to 2013, six counties in New Jersey experienced growth rates higher than the state's growth: Hudson (1.6%), Middlesex (0.9%), Somerset (0.9%), Bergen (0.9%), Union (0.8%), and Morris (0.6%).

From 2000 to 2010, northeastern counties in New Jersey experienced modest population increases. The northwestern rural region, central Jersey, and coastal region experienced population increases. Gloucester (13.2%) and Ocean (12.9%) counties had the highest population growth rates across the state, followed by Somerset (8.7%), Atlantic (8.7%), and Middlesex (8.0%) counties. Cape May County and Essex County were the only two counties to experience population decline in the 2000s, with decrease rates of 5.0% and 1.2%, respectively.

From 2010 to 2013, counties in northeastern and central New Jersey experienced high population growth. The population in Hudson County increased by 1.6%, making it the fastest growing county across the state in the three years. The northwestern rural counties (Sussex, Warren, and Hunterdon) experienced population declines after 2010, in contrast to their fast population growth in the 2000s. The population growth in southern and coastal counties also slowed down: Atlantic, Burlington, Cumberland, Gloucester, and Ocean counties experienced only modest population increases. Camden, Cape May, Monmouth, and Salem counties experienced population declines from 2010 to 2013.

## Age Structure

In general, differences in age distribution across places reflect differences in death, fertility, and net migration rates. Differences in age distributions also contribute to differences in social, health, and economic status across population groups.

The population of young adults (20-34 years old) experienced sharp growth from 2010 to 2013. The 20-24 year-old population grew by 1.4% while the 25-34 year-old age group grew by 1.2%. Thus, after the decline in the 1990s and 2000s, the number of young adults show higher growth in 2013, reflecting the baby-boom echo generation entering into these age groups. These cohorts may challenge prevention and treatment services in the current decade as they enter adulthood since a large proportion of treatment population fall in these age groups.

From 2010 to 2013, the growth rate of the older adult population (65 years of age and over<sup>3</sup>) increased as compared to the 2000s. The average annual growth rate was 0.99% from 2010 to 2013 compared to 0.65% in the 2000s. Older adults accounted for 13.8% of the total population in 2013. Between 2010 and 2013, the 65-74 year-old group saw the highest growth rate of all age groups with a rate of 5.4%. The 75-84 year old group decreased slightly by 0.5%, while the 85+ year old group increased by 2.5%. The baby boomer generation is largely responsible for this growth. Older adults are likely to experience problems from substance abuse and have risk for medication misuse, calling for prevention services that are sensitive to age-related or generational issues (Gold, et al., in press).

The median age of New Jersey's population increased from 34.4 years in 1990, to 36.7 years in 2000, to 39.0 in 2010, and to 39.1 in 2013. Among the counties in New Jersey, the median age is highest in Cape May (47.7 years) followed by Hunterdon (44 years). Hudson County is the youngest county (34.4 years) followed by Passaic (36.2 years).

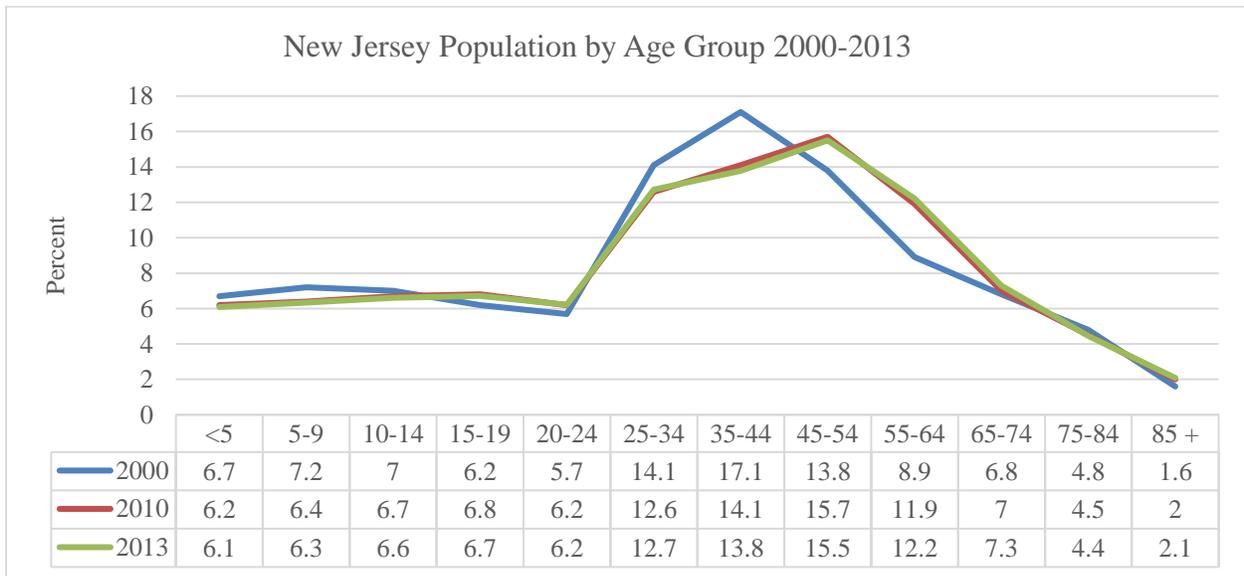

---

<sup>3</sup> This report follows the US census definition of older adults as being age 65 and older. In contrast, SAMHSA defines older adults as being 60 years of age and over (refer to SAMHSA's 2008 manual, *Substance Abuse among Older Adults*).

## Population by Race and Hispanic Origin

New Jersey has historically been one of the United States' primary destination states for immigrants. According to the 2013 American Community Survey 5-year estimates, the foreign born population is approximately 21.2%, an increase from 20.3% in 2010. The proportion of foreign born population in New Jersey is far greater than in the 1970 (9.0%) but still below that of 1910 (25.0%). The new diversity of immigration observed during the last 45 years demonstrates that the dominance of the European foreign born population has been replaced by the foreign born population from Latin America and Asia. As shown in the table below, the greatest population growth rates are among Asians (4.3%) and Hispanics (3.1%), compared to a 0.5% growth rate for the total population from 2010 to 2013. New Jersey's White population increased by 1.3%, while the population of African Americans decreased by 0.6%.

Asians are the fastest growing racial group in New Jersey. More than one in two (53.8%) of New Jersey's Asians are concentrated in three counties: Middlesex (181,870), Bergen (136,328), and Hudson (89,164). Among Asians, Asian Indians were the largest subgroup in 2013 (41.3% of the Asian population), followed by Chinese (18.4%), Filipino (15.2%), and Korean (12.1%). Since 2010, the growth of the Asian population slowed down. Compared to the annual increase rate of 5.1% in the 2000s, the annual increase rate dropped to 1.9% from 2010 to 2013. The total population of Koreans even decreased from 2010 to 2013.

Hispanics are the second fastest growing group, increasing by 3.1% from 2010 to 2013. More than a third (39.1%) of the state's Hispanic population resided in Hudson (273,611), Passaic (189,842), and Essex (163,713) counties. Newark City, Paterson City, Elizabeth City, and Union City had the largest Hispanic populations in 2013 in terms of gross numbers while Union City, Perth Amboy City, West New York Town, North Bergen Township, and Passaic City had the largest percentages of Hispanic population in 2013. Fourteen out of 565 municipalities in New Jersey had Hispanics as their majority populations (>50% of total population).

Race and Ethnic Origin	2000		2010		2013		Change 2010-2013

# **Criminal Justice Data: Alcohol and Drug Crime Indicators**

## **Introduction**

This section presents alcohol and drug-related crime indicators drawn from the New Jersey State Police's Uniform Crime Report (UCR). It should be noted that the UCR has limitations with respect to coverage and with respect to the accuracy in reflecting the amount of alcohol and drug involvement in reporting crimes. Alcohol and drug attributable crime is calculated by applying alcohol and drug attributable fractions (ADAF) to the counts of arrests/criminal offenses. The ADAFs were developed by using data collected through interviews and surveys of inmate populations on the use of alcohol and drugs in concert with criminal activity (Harwood et al, 1998). The drug attributable fractions are drawn from a 2011 National Drug Intelligence Center Report and alcohol attributable fractions are drawn from Harwood and colleagues (1998).<sup>4</sup>

### **Crime data attributable to alcohol and drugs, New Jersey, 2013**

- Number of alcohol-related arrests and arrest rates by type of offense in New Jersey
- Number of drug-related arrests and arrest rates by type of offense in New Jersey

---

<sup>4</sup> Detailed information about attributable fractions is available in subsequent sections of this Chartbook.

## **Criminal Justice Highlights**

There were 39,119 alcohol-related arrests and 68,449 drug-related arrests in New Jersey in 2013.

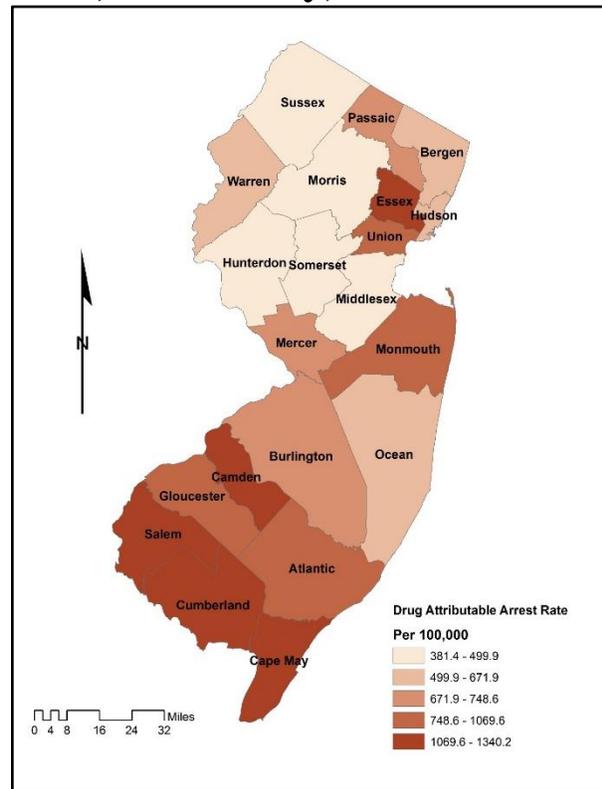

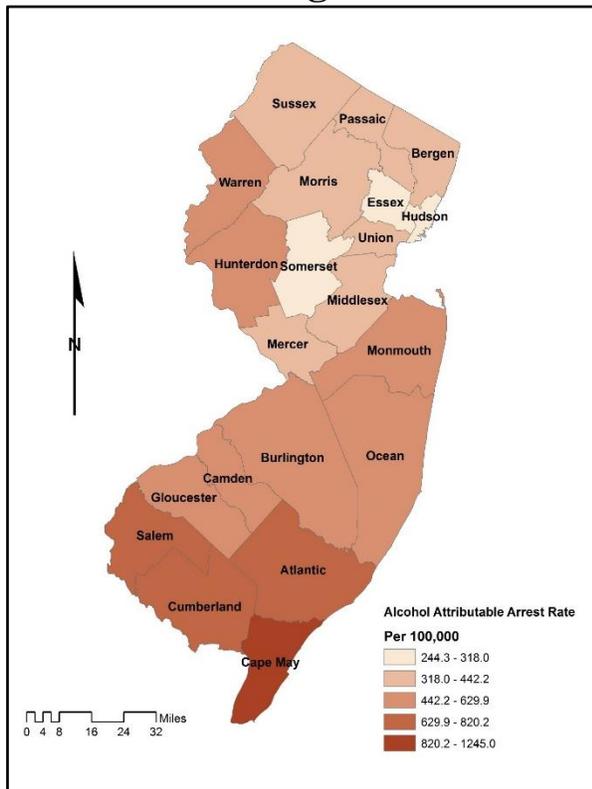

The alcohol-related arrest rate for New Jersey in 2013 was 442.9 arrests per 100,000 inhabitants. The major contributing factors to alcohol-related crimes were larceny (291 per 100,000), Driving under the influence (282 per 100,000), and other assault (261 per 100,000).

The drug-related arrest rate for New Jersey in 2013 was 775 arrests per 100,000 inhabitants. The major contributing factors to drug-related crimes were drug law violations (608 per 100,000), larceny-theft (291 per 100,000), and other assault (261 per 100,000).

Among New Jersey's counties, the top 5 alcohol arrest rates in 2013 were in Cape May (1,245 per 100,000), Salem (1,137 per 100,000), Cumberland (820 per 100,000), Atlantic (810 per 100,000), and Monmouth (630 per 100,000).

The top 5 drug-related arrest rates in 2013 were in Salem County (1,603 per 100,000), Cape May County (1,329 per 100,000), Cumberland County (1,240 per 100,000), Camden County (1,207 per 100,000), and Essex (1,142 per 100,000).

# **Substance Abuse Treatment Admissions**

## **Introduction**

Substance abuse treatment admission indicators presented in this section are based on data from New Jersey Substance Abuse Monitoring System (NJSAMS) maintained by the Division of Mental Health and Addiction Services (DMHAS), New Jersey Department of Human Services. Profiles of clients served are presented by primary substance of abuse, by modality, and by demographics.

## **Treatment Admissions**

- Treatment admissions by substance of abuse and modality of care
- Demographic characteristics of substance abuse treatment clients
- Treatment admissions rate by primary drug, by county

## **Substance Abuse Treatment Admissions Highlights**

Heroin/Other Opiates (46%) and Alcohol (25%) were the primary substances of abuse for those presenting for substance abuse treatment in New Jersey in 2014. Since 2011, the percentage of admissions for heroin have increased (from 42%) and those for alcohol have decreased (from 32%).

Outpatient treatment accounted for 47% of all substance abuse admissions for New Jersey in 2014, a decrease from 58% in 2011. Among outpatient treatment types, general Outpatient Treatment (47%) and Intensive Outpatient (35%) were the primary treatment modalities.

Among people receiving residential treatment services in 2014, among residential treatment types, Residential Detox and Short-Term Residential were the primary treatment modalities, with 33% and 34% of residential treatment services, respectively.

Substance abuse treatment clients in New Jersey in 2014 were 61% White, 22% African American, and 15% Latino. About half were high school graduates and the majority (60%) were unemployed. Just over three quarters were single and 55% were between ages 25 and 44 at the time of admission. Only about 1% reported problematic gambling behaviors.

Among New Jersey's counties, Ocean (6,229), Monmouth (5,603), Essex (5,475), Camden (5,052), and Middlesex (4,075) had the highest total substance abuse treatment admissions. In terms of the rate of substance abuse treatment admissions per 100,000 residents, Cape May (2,171), Atlantic (1,386), Cumberland (1,201), Ocean (1,071), and Camden (986) had the highest rates of substance abuse treatment admissions.

For treatment admissions with alcohol as the primary substance of abuse, Monmouth (1,586), Ocean (1,325), Middlesex (1,095), Essex (1,076), and Camden (1,154) had the highest total admissions. In terms of the rate per 100,000, Cape May (579), Cumberland (301), Atlantic (278), Monmouth (252), Hunterdon (240) and Warren (240) had the highest rates of admission with alcohol as the primary substance of abuse.

For treatment admissions with any drug as the primary substance of abuse, Ocean (4,904), Essex (4,399), Monmouth (4,017), Camden (3,898), and Atlantic (3,051) had the highest total admissions. In terms of the rate per 100,000, Cape May (1,592), Atlantic (1,108), Cumberland (901), Ocean (844), and Gloucester (774) had the highest rates of admission with any drug as the primary substance of abuse.

# **Chapter 2: County Profile of Social Indicators**

# Introduction

The County Profile of Social and Health Indicators is derived from archival sources published by the U.S. Bureau of the Census and New Jersey governmental agencies, including the Departments of Human Services, Health, Education, and Law and Public Safety. Data are also obtained from DMHAS's Substance Abuse Monitoring System. Appendix A presents data at the county level for the substance abuse indicators summarized in this chapter and includes more data on consequences of substance abuse, root causes of substance abuse, local conditions, and demographics.

## **Population:**

Population size, growth, and crime rate by county and municipality  
County demographic characteristics (age, race, density and poverty level)

## **Criminal Justice Data:**

Alcohol related crime by age and by type of offenses  
Drug related crime by age and by type of offenses

## **Substance Abuse Treatment Admissions Data:**

Substance abuse treatment admissions by primary substance of abuse  
Substance abuse treatment admissions by modality of care

# Salem County Demographic and Social Indicator Profile

# **Chapter 3: Municipal Profile of Selected Social Indicators**

## Introduction

This chapter provides detailed municipal-level data across all counties in New Jersey. The first section provides a discussion of selected aspects of the municipal data from a broader, statewide perspective. For some of the key indicators, a summary statistics table shows the municipalities that had the maximum and minimum values, the median or central value, along with the statewide total or average values.

As can be gauged from the table on the next page, there is significant variation among the municipalities on each of the indicator variables. A statewide value for an indicator significantly different from the median value suggests a notable skew in the data for that indicator variable. For instance, the median value for drug attributable criminal offenses/1,000 population is 5.1, while the statewide rate is 7.2. This indicates that the statewide average is being strongly affected by relatively few municipalities. In other words, even though half of the communities have rates of 5.1 or lower (by definition of the median value), there are a few communities with rates high enough to raise the statewide average almost two-fold. Another indication of this data skew can be inferred by the distribution of total number of drug arrests among the municipalities above the median. For example, almost half of all the drug arrests (31,472 of the total 63,798) were made in 45 out of the total 565 municipalities in the state of New Jersey.

Some care should be taken in interpreting the data presented in the chartbook. Some of the extreme values listed are found in very small communities where small base numbers or small populations can yield high rates. For example, the Teterboro municipality has a high poverty rate (50.0%) for individuals aged 65 years and older, but this was calculated using the municipality's population of two individuals who were aged 65 years and older, one of whom was living in poverty.

The rest of this chapter reviews noteworthy variations and highlights for different indicators. This municipality-based perspective is very useful in understanding the dynamics of the wide cross-section of communities in the State of New Jersey.

## Statewide Summary Statistics for Key Municipal Social and Health Indicators, 2013

Summary Statistics for Key Municipal Social and Health Indicators	Maximum	Median	Minimum	Statewide Values
Population	277,357 (Newark City)	8,057	3 (Pine Valley Borough)	8,832,406
Population Growth 2010-2013 (%)	75.0 (Tavistock Borough)	0.9	-80.0 (Walpack Township)	0.5
Population Density/Square mile	57,596.4 (Guttenberg Town)	2,135.7	0.3 (Walpack Township)	1,195.5
Population under 18 years (%)	44.0 (Lakewood)	22.3	4.4 (Surf City Borough)	23.2
Population over 60 years (%)	58.7 (Manchester Township)	19.1	11.0 (Passaic City)	13.8
Householder Living alone and over 65 years of age (%)	33.3 (Walpack Township)	3.6	0.4 (New Hanover Township)	3.8
Median household income (\$)	198,966 (North Caldwell Borough)	79,490.5	23,365 (Salem Township)	71,629
Poverty, all ages (%)	39.8 (Camden City)	6.0	0.0 (Multiple)	10.5
Child poverty, under 18 (%)	62.2 (Paulsboro Borough)	6.6	0.0 (Multiple)	14.9
Child poverty, under 5 (%)	68.8 (Salem City)	6.3	0.0 (Multiple)	17.7
Poverty, over 65 (%)	50.0 (Teterboro Borough)	5.2	0.0 (Multiple)	7.5
Unemployment (%)	28.9 (Salem City)	8.6	0.0 (Multiple)	10.1
Households receiving cash assistance	23.9 (Paulsboro Borough)	1.5	0.0 (Multiple)	23.1
Single, Female-Headed Households with Children (%)	18.5 (Salem City)	2.7	0.0 (Multiple)	4.4
Child to Adult Ratio (Children per 100 adults)	9.3 (Surf City Borough)	35.6	98.8 (Lakewood Township)	36.8
Violent crime rate/1,000	32.7 (Margate City)	0.8	0.0 (Multiple)	2.9
Non-violent crime rate/1,000	174.1 (Avalon Borough)	13.2	0.0 (Multiple)	18.9
Total crime rate/1,000	175.7 (Avalon Borough)	14.7	0.0 (Multiple)	21.8
Birth rate 15-50/1,000	214 (Wildwood Crest Borough)	45	0 (Multiple)	51
Birth rate 15-19/1,000	347 (Neptune City Borough)	0	0 (Multiple)	12
High school graduates, persons 25 years and older (%)	100.0 (Multiple)	92.4	61.1 (Bridgeton)	88.0
College graduates, persons 25 years and older (%)	100.0 (Pine Valley Borough)	34.8	0.0 (Walpack Township)	35.8
School Budget per Pupil (K-12) (482 reporting)	63,220 (Stone Harbor Boro)	15,715	762 (Wood Ridge Borough)	15,789
School Completion Rate 2005-2009 (%) (198 reporting)	99.4 (Glen Rock Borough)	91.2	10.8 (Pine Ridge Borough)	88.1
Alcohol Attributable Criminal Offenses/100,000	28 (Pine Valley Borough)	0.6	0.0 (Multiple)	1.1
Drug Attributable Criminal Offenses/100,000	391 (Buena Vista Township)	5.1	0.0 (Multiple)	7.2

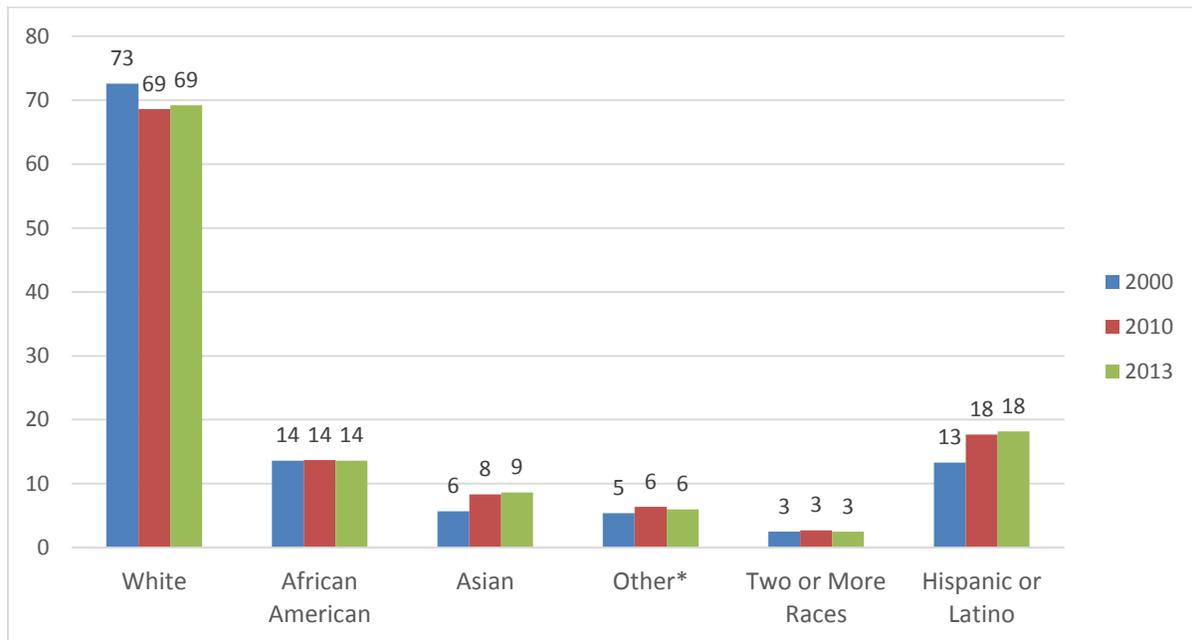

## Race and Ethnicity

From 2000 to 2013, the percentage of Whites decreased by 4%. The percentages of Hispanic or Latinos increased by 5.0% and the percentage of Asians increased by 3.0%. The percentages of people who are African American or Black, other, or two or more races, remained the same.

While the State, as a whole, is racially diverse, there are some municipalities with populations that are dominated by a single race. For example, the populations in three municipalities (East Orange, Lawnside, and Irvington) in the state are at least 75.0% African American or Black. Meanwhile, the populations in Pine Valley, Lavallette, and Walpack are all 100% White and the populations in 94 (17.0%) municipalities are at least 95.0% White.

In terms of ethnicity, fourteen municipalities had Hispanics as the majority of their population.

### Racial and Ethnic Composition, New Jersey, 2000-2013 (%)

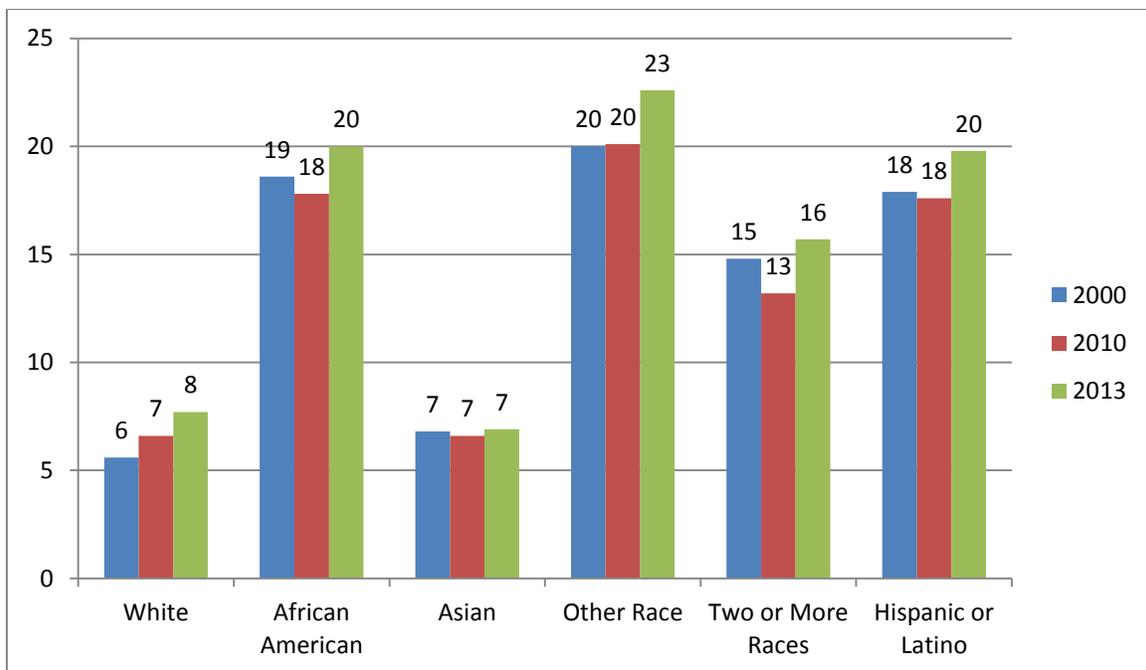

## Poverty

The statewide poverty rate in 2013 was 10.4%, compared to 8.9% in 2000. The New Jersey poverty rate compares positively to the national rate of 15.4%. The poverty rate is the percentage of people who were living in poverty (below the federal poverty threshold, specified for family size)<sup>5</sup> in a calendar year. For example, in 2013, families with one child were considered to be living in poverty if their annual income was below \$18,751. Fifty-four municipalities in the state had a poverty rate above the national average. The number of municipalities with poverty rate less than 3.0% decreased from 139 municipalities in 2000, to 107 in 2010, and 97 in 2013.

Additionally, the poverty rates vary significantly between the various races and ethnicities. The poverty rates by race/ethnicity for the years 2000-2013 are shown in the figure below. Poverty rates have increased for all races and ethnicities other than Asians since 2000. About a fifth of all New Jersey residents who are African American, some other race, or Hispanic and Latino live in poverty, compared to 8.0% of whites and 7.0% of Asians.

### Poverty by Race, New Jersey, 2000-2013 (%)

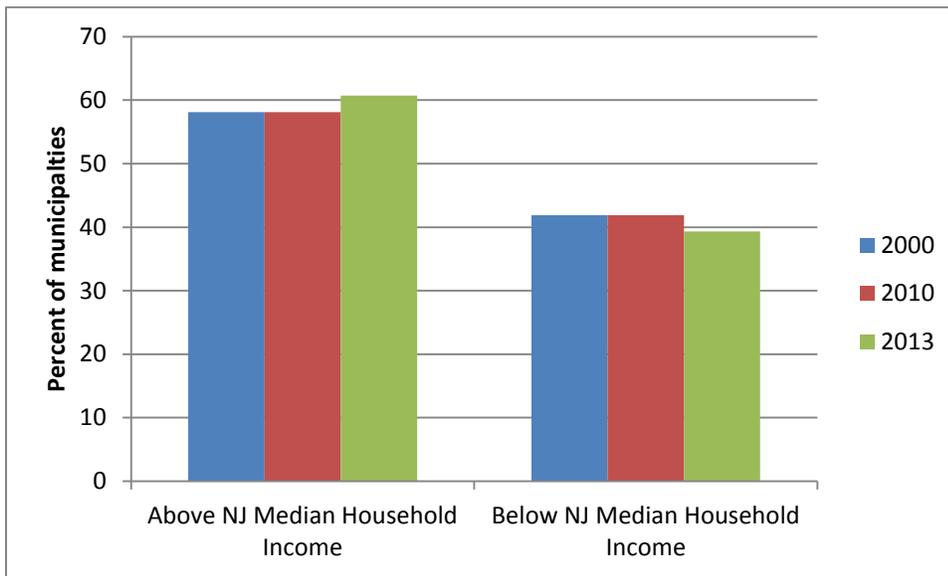

<sup>5</sup> For a detailed discussion of measures of poverty, please see this information sheet from the Institute for Research on Poverty at the University of Wisconsin: <http://www.irp.wisc.edu/faqs/faq1.htm>

## Median Income

The median household income of New Jersey in 2013 was \$71,629 in 2013, compared to the national median income of \$53,046. It is worth mentioning that 341 municipalities (out of 562) had median household incomes above the state median level. Also, only 66 municipalities in New Jersey had a median income less than the national median household income. The percentages of municipalities above and below the median household income for New Jersey are shown in the figure below.

### Percentage of New Jersey Municipalities Above or Below Median Household Income, 2000, 2010, and 2013

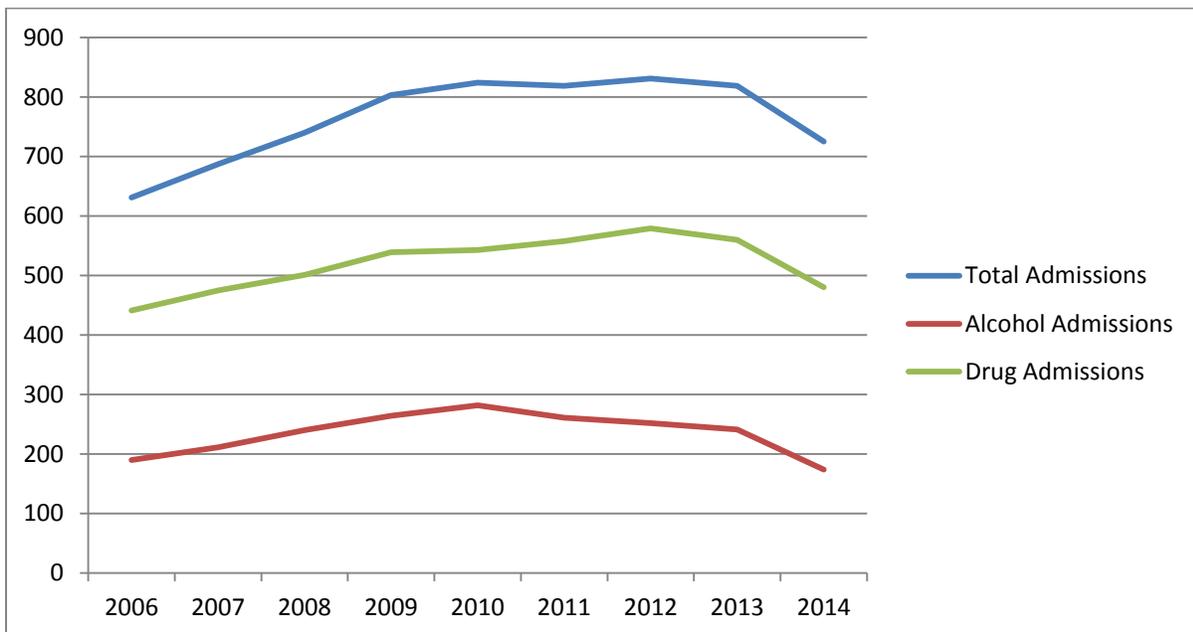

## Substance Abuse Treatment Admissions

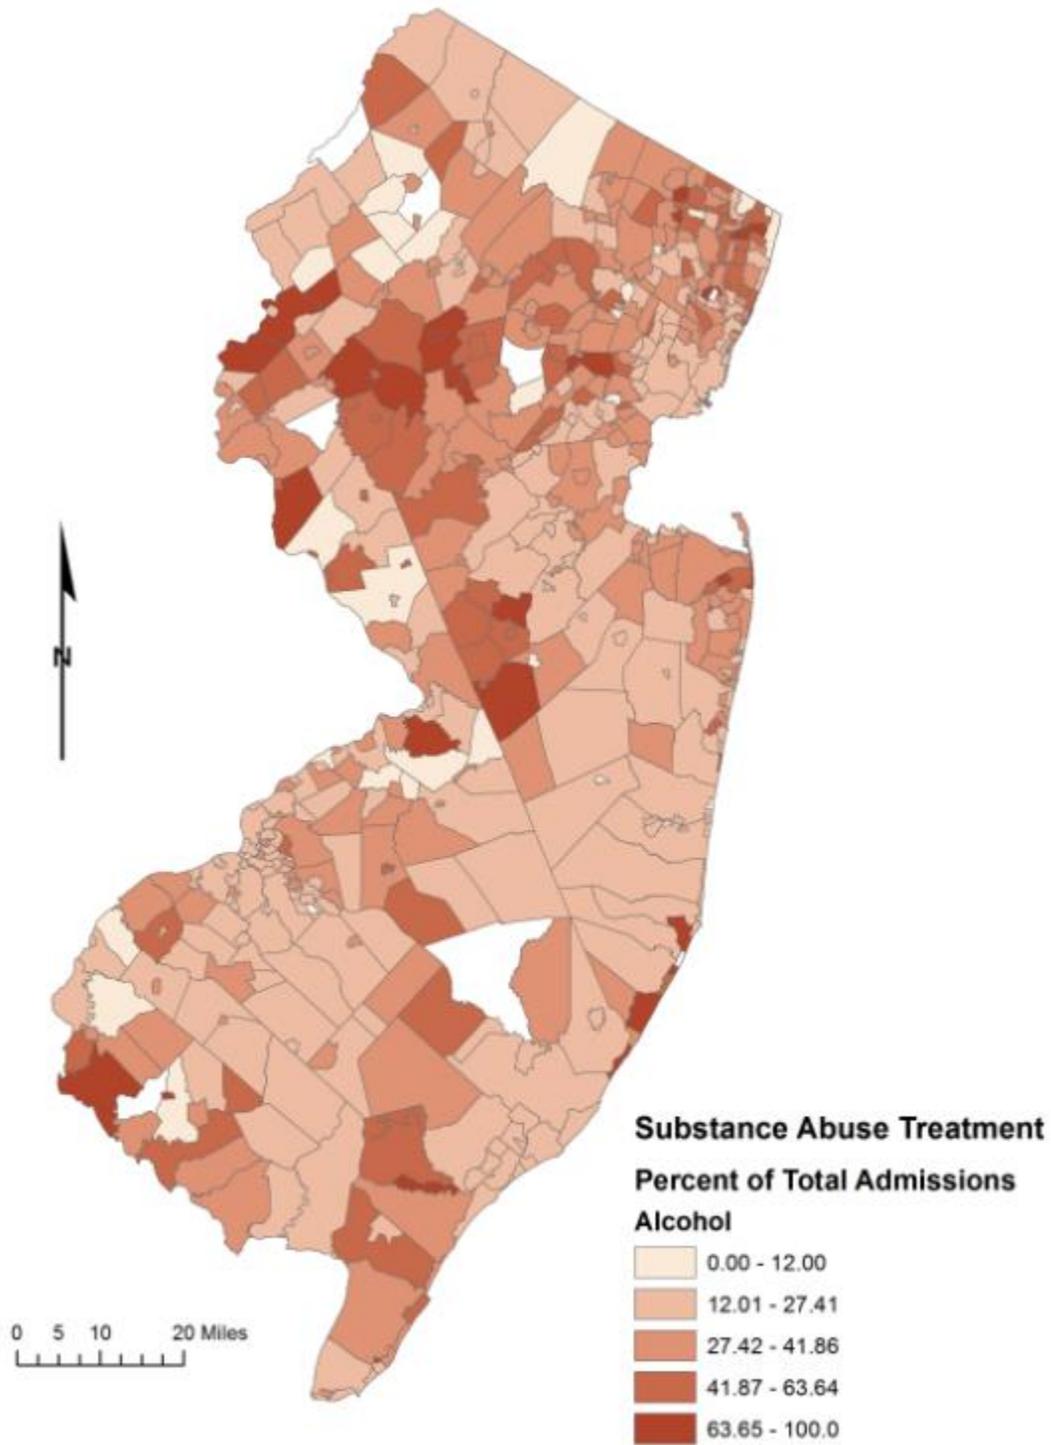

Alcohol and Drug Treatment Admissions are an indirect measure of the substance abuse problem at a community level. As the data within this chartbook will demonstrate, substance abuse problems are not exclusively limited to a few communities alone. The top 10 municipalities with the highest substance abuse treatment admissions represented 16% of all statewide substance abuse treatment admissions in 2014. Newark City (n=2,868), Jersey City (n=2,039), Paterson City (n=1,820), Camden City (n=1,681), and Atlantic City (n=1,135) were the five municipalities with highest treatment admissions in terms of raw numbers.

In 2014, the total number of substance abuse treatment admissions was 58,863 with 15,673 alcohol treatment admissions and 43,190 drug treatment admissions. As illustrated in the chart below, all substance abuse treatment admissions trended upwards from 2006 to 2012, peaking in 2012 and then declining through 2014. Statewide trends in admissions are shown below in terms of the rate per 100,000 of total admissions, alcohol admissions, and drug admissions.

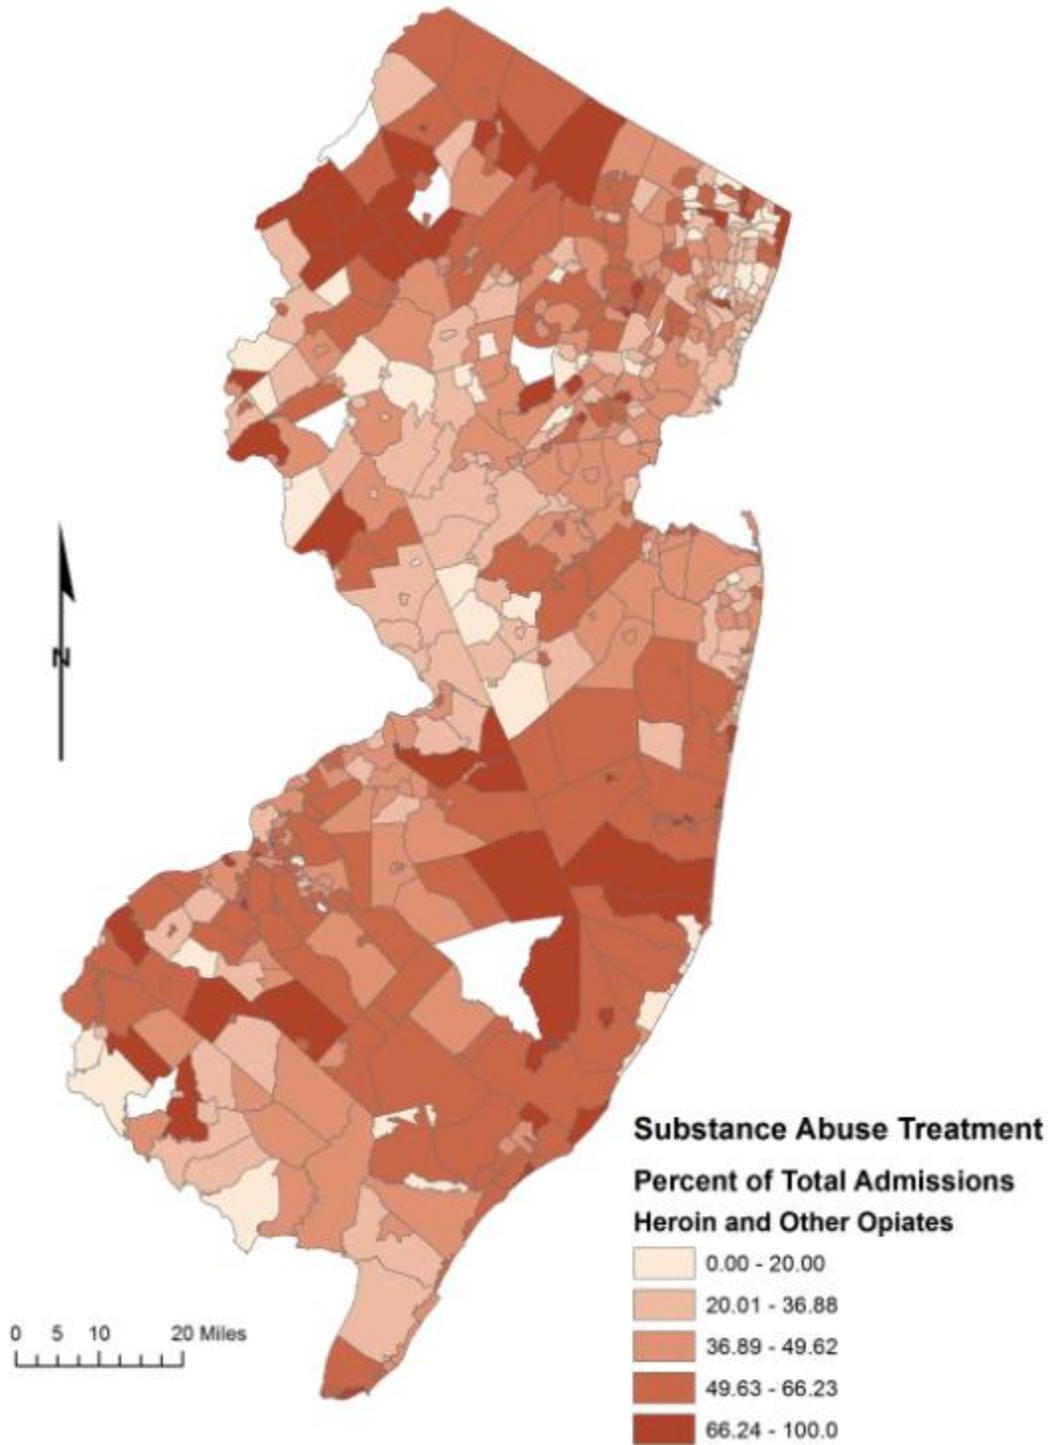

### Substance Abuse Treatment Admissions Rate per 100,000: 2006-2014

## Alcohol and Drug Attributable Crime

Another indirect measure of substance abuse dependence and problems is the amount of crime that can be attributed to use of alcohol and drugs. Note here that these values are impacted by the intensity of enforcement and should be considered as only a partial indicator of drug abuse prevalence. Alcohol and Drug Attributable crime reflect crimes that occur as a direct result of substance use (i.e., DUI, liquor law violation, drug abuse violation) as well as by calculating the percentage of other crimes (i.e., homicide, larceny, motor vehicle theft) that can be considered attributable to substance use. These fractions aim to attribute crime to alcohol and drugs only for crimes that were committed by a person who was currently intoxicated.<sup>6</sup>

The National Institute on Drug Abuse established the Alcohol and Drug Attribution Factors (ADAF) through surveys with inmates to estimate the percentage of crimes that were associated with alcohol and drug use. The ADAF is applied to the total counts of crime to produce estimates of alcohol and drug attributable crime. Updated drug attributable fractions come from the National Drug Intelligence Center (2011). Alcohol attributable fractions are drawn from Harwood et al. (1998) which continue to be used in recent literature.

Despite the limitations of these indirect measures, they are helpful tools for gauging the extent to which collateral problems are associated with substance abuse. In the tables that follow, it is clear that communities with high numbers of alcohol and drug attributable criminal offenses are also suffering from some of the state's highest poverty rates. This strong convergence of different indicators could be useful in making informed policy interventions and undertaking resource allocation decisions.

---

<sup>6</sup> The attributable fractions only measure crime directly attributed to alcohol and drug use, not crime that occurs in the long-term trajectory of alcohol and drug use. For example, though one person's drug or alcohol use can cause non-users to commit crimes, these crimes are not accounted for in these fractions. Additionally, if a person is unable to find employment because of previous alcohol or drug use, and resorts to illegal activity, these activities are not included in the attributable fractions though they are indirectly caused by alcohol and drug use.

## Highest Alcohol Attributable Criminal Offenses and Poverty Rates, 2013

<b>Municipality</b>	<b>County</b>	<b>Total Alcohol Attributable Offenses, 2013 (#)</b>	<b>Poverty rate (%)</b>

Warren	31.8	32
New Jersey	55.9	33

\* Private property ordinances are local municipal laws that implement the state law P.L. 2000 C.33, which concerns the possession and consumption of alcoholic beverages by underage persons. The data was collected by Partnership for Drug Free New Jersey to ascertain the implementation status for each municipality across New Jersey. 463 (81.8%) of the state's municipalities provided valid responses. The percentage in this table was calculated based on the count of all municipalities in NJ, including both responding and non-responding municipalities.

### III.C.2 – Alcohol and Tobacco Retailers within ½ Mile of Schools, 2015

County	Number of Liquor Stores Within ½ Mile of Schools	Average Number of Liquor Stores Within ½ Mile of Schools	Number of Bars/ Restaurants Within ½ Mile of Schools	Average Number of Bars/ Restaurants Within ½ Mile of Schools	Number of Tobacco Retailers Within ½ Mile of Schools	Average Number of Tobacco Retailers Within ½ Mile of Schools

Somerset	7	4	1.2
Sussex	1	3	2.0
Union	9	17	3.1
Warren	1	4	3.7
New Jersey	96	244	2.8

\* The number of local health departments and public health facilities were updated in 2016. The facility density was calculated using the total population estimates from 2014 American Community Survey 5-year estimates.

\*\* New Jersey's local health departments are community-based public health service providers and the front-line forces responsible for providing essential public health services that protect and promote the health of New Jersey's citizens.

\*\*\* Public Health Facilities include hospitals of all types (acute care, rehabilitation, psychiatric, specialty), federally-qualified health centers, and satellite emergency departments in New Jersey.

# Appendix C: Data Sources and Calculations

## Data Sources and Calculations: County

**NOTE:** Missing or Unavailable data is left blank in the tables or represented by the following symbols: dot (.), dash (-), or asterisk (\*).

### I. Consequences of Substance Abuse

#### A. Crime

##### *Number and Rates of Arrests*

New Jersey Department of Law & Public Safety, Division of State Police. (2013). State and county arrest summary, crime in New Jersey, 2013 uniform crime report. Retrieved from: <http://www.njsp.org/ucr/2013/index.shtml>

**NOTE:** Alcohol and drug attributable crime is calculated by applying alcohol and drug attributable fractions (ADAF) to the counts of arrests/criminal offenses. For ADAF figures, data presented only includes a select number of categories of crime, guided by the literature.

The ADAFs are based on data gathered through interviews and surveys of inmate populations on the use of alcohol and drugs in concert with criminal activity. They can be found in Appendix C of this document:

<http://archives.drugabuse.gov/EconomicCosts/Index.html>.

The drug fractions used for this Chartbook come from the National Drug Intelligence Center (2011), found here: <https://www.justice.gov/archive/ndic/pubs44/44731/44731p.pdf> and the alcohol fractions used were from Harwood et al. (1998) and can be found here: [http://archives.drugabuse.gov/EconomicCosts/Table6\\_8.html](http://archives.drugabuse.gov/EconomicCosts/Table6_8.html).

A detailed explanation of the methodology used to calculate attributable fractions can be found here: <http://archives.drugabuse.gov/EconomicCosts/Chapter6.html> and here [https://www.whitehouse.gov/sites/default/files/ondcp/policy-and-research/drug\\_crime\\_report\\_final.pdf](https://www.whitehouse.gov/sites/default/files/ondcp/policy-and-research/drug_crime_report_final.pdf). The latter link provides a discussion of the limitations of attributable fractions.

#### B. Alcohol and Drug Dependence

##### *Number and percentage of substance abuse treatment admissions*

New Jersey Department of Human Services, Division of Mental Health and Addiction Services. (2014). New Jersey Substance Abuse Monitoring System (NJSAMS) dataset.

## **II. Substance Abuse Problems**

### **A. Current Use of Alcohol and Drugs**

*Percentage of respondents who answered affirmatively to substance use items*

#### *Middle School Use*

New Jersey Department of Human Services, Division of Mental Health and Addiction Services. (2012). 2012 New Jersey middle school risk & protective factor survey. Retrieved from: <http://www.state.nj.us/humanservices/dmhas/publications/surveys/>

#### *Adult Use*

New Jersey Department of Human Services, Division of Mental Health and Addiction Services. (2009). New Jersey Household Survey on Drug Use & Health [data file]. Retrieved from: [http://www.state.nj.us/humanservices/dmhas/publications/surveys/household\\_byco.html](http://www.state.nj.us/humanservices/dmhas/publications/surveys/household_byco.html)

### **B. Age at First Use**

*Percentage of respondents who answered affirmatively to substance use items*

New Jersey Department of Human Services, Division of Mental Health and Addiction Services. (2009). New Jersey Household Survey on Drug Use & Health [data file]. Retrieved from: [http://www.state.nj.us/humanservices/dmhas/publications/surveys/household\\_byco.html](http://www.state.nj.us/humanservices/dmhas/publications/surveys/household_byco.html)

## **III. Root Causes**

### **A. Retail Availability**

*Total number of alcohol and tobacco licenses and the number of licenses per 1,000 residents*

New Jersey Department of Law & Public Safety, Division of Alcoholic Beverage Control. (2014). Listing of licensed alcohol retailers [data file].

New Jersey Department of the Treasury, Division of Taxation. (2014). Listing of cigarette retailers [data file].

### **B. Social Availability**

*Liquor Law Violations Arrests and Rate*

New Jersey Department of Law & Public Safety, Division of State Police. (2013). State and county arrest summary, crime in New Jersey, 2013 uniform crime report. Retrieved from: <http://www.njsp.org/ucr/2013/index.shtml>

NOTE: Liquor Law Violations refers to individual-level, not establishment-level crimes.

### **C. Community Norms Favorable to Substance Use**

#### *Private Property Ordinances*

The Partnership for a Drug-Free New Jersey. (2014). Private property ordinance database. Retrieved from: <http://www.drugfreenj.org/private-property-ordinance-database/>

#### *Alcohol & Tobacco Outlets within Walking Distance to Schools*

New Jersey Department of Law & Public Safety, Division of Alcoholic Beverage Control. (2014). Listing of licensed alcohol retailers [data file].

New Jersey Department of the Treasury, Division of Taxation. (2014). Listing of cigarette retailers [data file].

New Jersey Geographic Information Network. (2014). New Jersey public, private, and charter school point locations, NJ state plane NAD83 [data file]. Retrieved from: [https://njgin.state.nj.us/NJ\\_NJGINExplorer/DataDownloads.jsp](https://njgin.state.nj.us/NJ_NJGINExplorer/DataDownloads.jsp)

Number of alcohol and tobacco outlets within walking distance to schools was calculated by counting the total number of outlets within .5 mile from any K-12 school. Outlets in neighboring counties but within .5 mile linear distance from any school were also included. Outlets within more than one .5 mile buffers were counted only once for the total number of outlets. The total counts that reflecting overlaps were used to calculate the average number of outlets per school in each county.

## **IV. Local Conditions**

### **A. Community Environment**

#### *Population, Economic Deprivation, Community Attachment, Housing Adequacy and Languages Spoken at Home figures*

United States Census Bureau. (2013). American Community Survey [data file]. Retrieved from: <http://www.census.gov/programs-surveys/acs/>

NOTE: Population totals in the American Community Survey will not match the population totals from the US Census. As such, there will be a discrepancy between total population used here and those in the Demographic Profile.

### *Crime Level*

New Jersey Department of Law & Public Safety, Division of State Police. (2013). State and county arrest summary, crime in New Jersey, 2013 uniform crime report. Retrieved from: <http://www.njsp.org/ucr/2013/index.shtml>

## **B. Family Structure and Child Development**

### *Household Data, Male to Female Ratio, Child to Adult Ratio, Birth Rate Among Women Aged 15-50*

United States Census Bureau. (2013). American Community Survey [data file]. Retrieved from: <http://www.census.gov/programs-surveys/acs/>

### *Domestic Violence: Rate per 1,000*

New Jersey Department of Law & Public Safety, Division of State Police. (2013). Domestic Violence Report. Retrieved from: <http://www.njsp.org/ucr/domestic-violence-reports.shtml>

### *Children in Out-of-Home Care, Teen Age Birth Rate, Infant Mortality, Licensed Child Care Centers*

The Annie E. Casey Foundation. (2013). Kids count data center. Retrieved from: <http://datacenter.kidscount.org/data/bystate/StateLanding.aspx?state=NJ>

### *Population under 13 by July 1, 2013*

United States Census Bureau (2013). 2013 Population Estimates. Retrieved from: [http://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=PEP\\_2013\\_PEPAGESEX&prodType=table](http://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=PEP_2013_PEPAGESEX&prodType=table)

## **C. School Environment**

### *High School and College Graduation Percentages, College Age Resident Percentage*

United States Census Bureau. (2013). American Community Survey [data file]. Retrieved from: <http://www.census.gov/programs-surveys/acs/>

*Other School Indicators: 4<sup>th</sup>/8<sup>th</sup> Grade NJASK Index, 11<sup>th</sup> Grade HSPA Index, School Completion Rate*

Rutgers Continuing Studies' Center for Government Services. (2014). Legislative data book [data file].

*NOTE: NJASK and HSPA Indices*

The New Jersey Assessment of Skills and Knowledge (NJASK) and High School Proficiency Assessment (HSPA) are operational assessments which consist of three content areas for Grades 4, 8, and 11: Language Arts Literacy, mathematics, and science. This assessment is given to indicate the progress students are making in the 3 content areas and as a requirement of the No Child Left Behind Act of 2001

([http://www.nj.gov/education/assessment/es/njask\\_tech\\_report11.pdf](http://www.nj.gov/education/assessment/es/njask_tech_report11.pdf)).

The NJASK and HSPA indices show the performance of pupils on the three tests. In each case the mean average scores on each part of the test have been indexed with 1.000 representing a perfect score, and the indexes for the various parts of the test have been averaged (Legislative Data Book, 2010).

*High School Completion Rate*

Calculated by dividing the number of 20014 high school graduates by the estimated 2010 total ninth grade enrollment.

*Average daily school attendance*

New Jersey Department of Education's Office of School Finances [data file].

**D. Peer Behavior**

New Jersey Department of Law & Public Safety, Division of State Police. (2013). Domestic violence, 2013 uniform crime report. Retrieved from:  
<http://www.njsp.org/info/ucr2013/index.html>

**E. Substance Abuse Related Problems**

*ER Admissions (counts)*

New Jersey Department of Human Services, Division of Mental Health and Addiction Services. (2014). Emergency Admissions of Uniform Bill-Patient Data.

NOTE: The rates for ER admissions are calculated using total population estimates from 2014 American Community Survey.

- F. **Access to Health Care:** The count of local health departments and density of hospitals, federally-qualified health centers, and satellite emergency departments per 100,000 residents. The numbers of local health departments and public health facilities were updated in 2016. The population estimates for the calculation of public health facility densities were from 2014 American Community Survey 5-year estimates.

New Jersey Department of Health (2016). Directory of Local Health Departments in New Jersey. Retrieved from: <http://www.state.nj.us/health/lh/directory/lhdselectcounty.shtml>

New Jersey Geographic Information Network. (2016). Hospital point locations in New Jersey, NJ state plane NAD83 [data file]. Retrieved from: [https://njgin.state.nj.us/NJ\\_NJGINExplorer/DataDownloads.jsp](https://njgin.state.nj.us/NJ_NJGINExplorer/DataDownloads.jsp)

G. **Access to Substance Abuse Prevention Programming**

The number of organizations providing substance abuse prevention programming, number of programs focusing on alcohol, drugs, or tobacco, and the prevention strategy used. These data were merged from several sources: through an online survey of prevention professionals in New Jersey, the Governor's Council on Alcoholism and Drug Abuse Municipal Alliance reporting data, and data on federal and state funded prevention programming in New Jersey. These data are presented as total counts in the Chartbook. Please note that one program can focus on more than one substance of abuse and have more than one strategy.

V. **Demographics/Population Profile**

United States Census Bureau. (2013). American Community Survey [data file]. Retrieved from: <http://www.census.gov/programs-surveys/acs/>

# Data Sources and Calculations: Municipality

## I. Consequences of Substance Abuse

### A. Alcohol and Drug Related Crime

#### *Number of Arrests/Offenses*

New Jersey Department of Law & Public Safety, Division of State Police. (2013). State and county arrest summary, crime in New Jersey, 2013 uniform crime report. Retrieved from: <http://www.njsp.org/ucr/2013/index.shtml>

NOTE: Alcohol and drug attributable crime is calculated by applying alcohol and drug attributable fractions (ADAF) to the counts of arrests/criminal offenses. For ADAF figures, data presented only includes a select number of categories of crime, guided by the literature.

The ADAFs are based on data gathered through interviews and surveys of inmate populations on the use of alcohol and drugs in concert with criminal activity. They can be found in Appendix C of this document:

<http://archives.drugabuse.gov/EconomicCosts/Index.html>.

The drug fractions used for this Chartbook come from the National Drug Intelligence Center (2011), found here: <https://www.justice.gov/archive/ndic/pubs44/44731/44731p.pdf> and the alcohol fractions used were from Harwood et al. (1998) and can be found here: [https://archives.drugabuse.gov/EconomicCosts/Table6\\_8.html](https://archives.drugabuse.gov/EconomicCosts/Table6_8.html).

A detailed explanation of the methodology used to calculate attributable fractions can be found here: <http://archives.drugabuse.gov/EconomicCosts/Chapter6.html> and here [https://www.whitehouse.gov/sites/default/files/ondcp/policy-and-research/drug\\_crime\\_report\\_final.pdf](https://www.whitehouse.gov/sites/default/files/ondcp/policy-and-research/drug_crime_report_final.pdf). The latter link provides a discussion of the limitations of attributable fractions.

### B. Alcohol and Drug Dependence

#### *Number and percentage of substance abuse treatment admissions*

New Jersey Department of Human Services, Division of Mental Health and Addiction Services. (2014). New Jersey Substance Abuse Monitoring System (NJSAMS) dataset.

## II. Root Causes of Substance Abuse

### A. Retail Availability

*Total number of alcohol and tobacco licenses and the number of licenses per 1,000 residents*

New Jersey Department of Law & Public Safety, Division of Alcoholic Beverage Control. (2014). Listing of licensed alcohol retailers [data file].

New Jersey Department of the Treasury, Division of Taxation. (2014). Listing of cigarette retailers [data file].

## **B. Community Norms Favorable to Substance Use**

### *Private Property Ordinances*

The Partnership for a Drug-Free New Jersey. (2014). Private property ordinance database. Retrieved from: <http://www.drugfreenj.org/private-property-ordinance-database/>

Data collected via survey. *YES, NO, NR* (No Response) reflects the municipality's response to survey

### *Alcohol & Tobacco Outlets within Walking Distance to Schools*

New Jersey Department of Law & Public Safety, Division of Alcoholic Beverage Control. (2014). Listing of licensed alcohol retailers [data file].

New Jersey Department of the Treasury, Division of Taxation. (2014). Listing of cigarette retailers [data file].

New Jersey Geographic Information Network. (2014). New Jersey public, private, and charter school point locations, NJ state plane NAD83 [data file]. Retrieved from: [https://njgin.state.nj.us/NJ\\_NJGINExplorer/DataDownloads.jsp](https://njgin.state.nj.us/NJ_NJGINExplorer/DataDownloads.jsp)

NOTE: Number of alcohol and tobacco outlets within walking distance to schools was calculated by counting the total number of outlets within .5 mile from any K-12 school. Outlets in neighboring municipalities but within .5 mile linear distance from any school were also included. Outlets within more than one .5 mile buffers were counted only once for the total number of outlets. The total counts that reflecting overlaps were used to calculate the average number of outlets per school in each municipality.

## **III. Local Conditions**

### **A. Community Environment**

*Population, Economic Deprivation, Community Attachment, Housing Adequacy and Languages Spoken at Home figures*

United States Census Bureau. (2013). American Community Survey [data file]. Retrieved from: <http://www.census.gov/programs-surveys/acs/>

NOTE: Population totals in the American Community Survey will not match the population totals from the US Census. As such, there will be a discrepancy between total population used here and those in the Demographic Profile.

### *Crime Level*

New Jersey Department of Law & Public Safety, Division of State Police. (2013). State and county arrest summary, crime in New Jersey, 2013 uniform crime report. Retrieved from: <http://www.njsp.org/ucr/2013/index.shtml>

## **B. Family Structure**

*Household Data, Male to Female Ratio, Child to Adult Ratio, Birth Rate Among Women Aged 15-50, Teen Age Birth Rate*

United States Census Bureau. (2013). American Community Survey [data file]. Retrieved from: <http://www.census.gov/programs-surveys/acs/>

## **C. School Environment**

*High School and College Graduation Percentages, College Age Resident Percentage*

United States Census Bureau. (2013). American Community Survey [data file]. Retrieved from: <http://www.census.gov/programs-surveys/acs/>

*Other School Indicators: 4<sup>th</sup>/8<sup>th</sup> Grade NJASK Index, 11<sup>th</sup> Grade HSPA Index, School Completion Rate, School Budget per Pupil*

Rutgers Continuing Studies' Center for Government Services. (2014). Legislative data book [data file].

### *NOTE: NJASK and HSPA Indices*

The New Jersey Assessment of Skills and Knowledge (NJASK) and High School Proficiency Assessment (HSPA) are operational assessments which consist of three content areas for Grades 4, 8, and 11: Language Arts Literacy, mathematics, and science. This assessment is given to indicate the progress students are making in the 3 content areas and as a requirement of the No Child Left Behind Act of 2001

([http://www.nj.gov/education/assessment/es/njask\\_tech\\_report11.pdf](http://www.nj.gov/education/assessment/es/njask_tech_report11.pdf)).

The NJASK and HSPA indices show the performance of pupils on the three tests. In each case the mean average scores on each part of the test have been indexed with 1.000 representing a perfect score, and the indexes for the various parts of the test have been averaged (Legislative Data Book, 2010).

*High School Completion Rate*

Calculated by dividing the number of 2014 high school graduates by the estimated 2010 total ninth grade enrollment.

**D. Substance Abuse Related Problems**

*ER Admissions*

New Jersey Department of Human Services, Division of Mental Health and Addiction Services. (2014). Emergency Admissions of Uniform Bill-Patient Data.

The rates for ER admissions are calculated using total population estimates from 2014 American Community Survey.

**IV. Demographic Profile**

United States Census Bureau. (2013). American Community Survey [data file]. Retrieved from: <http://www.census.gov/programs-surveys/acs/>
