

# New Jersey Department of Human Services Division of Mental Health and Addiction Services Substance Abuse Treatment Provider Performance Report July 1, 2015 - June 30, 2016

Welcome to the first Statewide Substance Use Treatment Provider Performance Report issued by the New Jersey Division of Mental Health and Addiction Services (DMHAS) for all substance use disorder treatment providers licensed by the Department of Human Services.

The Senate and General Assembly of the State of New Jersey enacted an Act concerning substance use treatment facility performance (N.J.S.A. 26: 2G-38.) requiring the annual preparation of Substance Use Treatment Provider Performance Report. The performance report shall show and compare the overall performance of each substance use treatment provider in the State with the Statewide average performance based on national outcome measures for each level of care. The division shall use the national outcome measures (NOMs) identified below and, as appropriate, any other national outcome measures identified by the Substance Abuse and Mental Health Services Administration. The performance report shall include the following national outcome measures: (1) percentage of clients abstinent from alcohol on admission and discharge; (2) percentage of clients abstinent from drugs on admission and discharge; (3) percentage of clients employed on admission and discharge; (4) percentage of clients enrolled in school or a job training program at admission and discharge; (5) percentage of clients who are homeless on admission and discharge; and (6) average length of client treatment.

There were 73,264 admissions to addiction treatment from 7/1/2015 to 6/30/2016. Of these admissions, 51,416 clients were unduplicated. For these unique clients, 37,379 had 1 admission, 9,223 had 2 admissions, and 4,874 had 3 admissions or more during this reporting period. It should be noted that multiple admissions may be reflective of a client's movement from one level of care to another, and not necessarily a relapse. The primary drug of choice and focus of substance use disorder treatment at admission was heroin or other opiates (50%), followed by alcohol (27%) and marijuana (15%). The most common levels of care were outpatient (30%) and intensive outpatient (26%), followed by opioid maintenance-outpatient (11%), short-term residential (10%) and long-term residential (5%). Males accounted for 67% of admissions with females comprising 33%. With regards to age, 3% were under 18, 7% were 18-21, 30% were 22 to 29, 36% were 30 to 44, 17% were 45 to 54, and 8% were 55 and over. For admissions, 61% were white, 22% were black and 15% were of Hispanic origin. The most common referral sources were criminal justice (29%) and self (28%), followed by the Intoxicated Driving Resource Center (10%) and addiction services programs (11%). A large percentage were Driving While Intoxicated/Driving Under the Influence (18%) clients. With regards to health insurance, 49% had Medicaid, 17% had private insurance and 40% were uninsured.

This performance report includes data on number of admissions and discharges, length of stay in treatment and performance on the national outcome measures for each provider as well as statewide performance. The domains of focus are: abstinence, employment, education/training, stability in housing and retention in treatment. The report is broken out by the level of care provided.

Outcomes are only reported if the agency had at least 20 discharges. The outcomes are based on data for the same client. That is, all discharges were selected for the reporting year and then the admission information for that discharge was linked in order to compute the outcome measures.

By publically reporting these outcomes, the DMHAS hopes to provide consumers with information on the outcomes achieved so they can make informed decisions about choosing a provider and helps providers see how they are doing compared to their New Jersey peers and to the state so that they can identify areas that might need improvement.

These performance reports are one strategy that DMHAS has adopted in its continuous quality improvement efforts focused on helping to improve services to the clients we serve. The NOMs are one way to monitor client outcomes, help direct system improvements and achieve better accountability.

For convenience, links are provided for each of the levels of care listed below to take the reader directly to that section of the report. A definition for the level of care is provided at the beginning of the section. At the beginning and end of this report, a link is provided for the directory of providers represented in this report, which includes the provider's address and telephone number.

**Level of Care**

## Opioid-Maintenance Outpatient

Methadone, used for maintenance and/or detoxification is provided in combination with outpatient treatment. Methadone is a synthetic opioid used medically as an analgesic and as an anti-addictive medication for patients who meet the criteria for opioid dependence. Buprenorphine is another option used medically for the treatment of opioid dependence.

## Opioid-Maintenance Intensive Outpatient

Methadone, used for maintenance and/or detoxification is provided in combination with intensive outpatient treatment. Methadone is a synthetic opioid used medically as an analgesic and as an anti-addictive medication for patients who meet the criteria for opioid dependence. Buprenorphine is another option used medically for the treatment of opioid dependence.

## Detox-Methadone Outpatient

Methadone is used medically for the treatment of opioid dependence. Methadone can be used for the medically supervised withdrawal from opioids to provide a transition from the state of physical dependence on opioids to an opioid-free state, while minimizing withdrawal symptoms and avoiding the side effects of methadone. The goal of this service is to achieve a safe and comfortable withdrawal from mood altering drugs and to effectively facilitate the patient's entry into ongoing treatment and recovery. Client must participate in concurrent outpatient, intensive outpatient or partial care as determined by an ASAM assessment.
