1.0 PURPOSE AND SCOPE OF WORK

A LIC was obtained by Rutgers, The State University of New Jersey to identify and quantify asbestos-containing materials (ACM) at 11 Bartlett Street located in New Brunswick, New Jersey. The survey was performed prior to planned building demolition. A LIC performed the survey in accordance with 10 CFR Part 763.

A total of fifty (50) bulk samples of suspect materials were initially collected, all of which were analyzed via Polarized Light Microscopy (PLM). Five (5) of these samples which were non-asbestos via PLM analysis were additionally were submitted for Transmission Electron Microscopy (TEM-EDX) analysis. An additional sixty (60) bulk samples were collected on April 5, 2017, all of which were analyzed via PLM.

2.0 SUMMARY OF FINDINGS

This section discusses our delineation of non-hazardous applications of suspect asbestos-containing materials and the results of the related bulk samples that were collected and analyzed. Recommendations concerning these materials are presented in Section 3.0. Sections 2.1 and 2.2 summarize pertinent data about homogenous applications that were classified as asbestos-containing and non-asbestos-containing material respectively.

2.1 Materials Classified Asbestos Containing Materials

As shown in the following charts, asbestos-containing materials were identified as follows:

**Table 1 - Bulk Sample Analyses Results**

Limited Asbestos-Containing Routing Survey
Russell Apartments, Building Nos. 3720-3782
Busch Campus, Piscataway, New Jersey
EXECUTIVE SUMMARY

This inspection report provides a thorough identification of asbestos-containing material (ACM) at Russell Apartments Building 1736 (Apartments 756 - 780) located on Busch Campus, New Brunswick, New Jersey. The survey was performed in accordance with 40 CFR Part 759.85 (a) as well as the requirements of Rutgers University. The investigative survey was conducted on August 17, 1998 by experienced and licensed inspector Judith A. Smith.

The types and the estimated quantities of ACM that were found are shown on the table below. Section 2.9 contains a further detailed discussion of the ACM.

<table>
<thead>
<tr>
<th>Material Description</th>
<th>Location</th>
<th>Classification</th>
<th>Total Estimated Quantity (units)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Grey Sink Undercoating</td>
<td>Kitchen</td>
<td>Surfacing/Miscellaneous Material</td>
<td>70 Eachs</td>
</tr>
<tr>
<td>9&quot; x 9&quot; Brown VFT w/White Streak</td>
<td>Living Rooms, Kitchens/Bedrooms, Corridors</td>
<td>Surfacing/Miscellaneous Material</td>
<td>4,136 Square Feet</td>
</tr>
<tr>
<td>9&quot; x 9&quot; Grey VFT w/Black &amp; White Streak and associated Black Mastic</td>
<td>Living Rooms, Kitchens/Bedrooms, Corridors Bathrooms</td>
<td>Surfacing/Miscellaneous Material</td>
<td>4,136 Square Feet</td>
</tr>
<tr>
<td>Pipe fittings associated with fiberglass insulated piping</td>
<td>Basement, laundry room, mechanical room, crawlspace</td>
<td>Thermal Systems Insulation</td>
<td>120 Fittings</td>
</tr>
</tbody>
</table>

The asbestos-containing pipe fittings in the basement are located on fiberglass insulated piping and were noted to be in good condition.

The nonfrillable sink undercoating and floor tiles listed above were all noted to be in good condition.

Both types of the nonfrillable floor tile exist beneath either linoleum or carpeting. Although the mastic associated with the 9" x 9" brown VFT does not contain asbestos, the floor tile are asbestos-containing. Since the tile cannot be feasibly separated from the mastic, it should be treated as an asbestos-containing material (ACM) for removal purposes. Furthermore, the carpeting and/or linoleum covering the asbestos-containing tiles should also be considered as asbestos materials for removal purposes. If these materials will be impacted by planned renovations, removal is recommended. If these materials will not be affected, any areas of exposed mastic should be patched and repaired and addressed under an Operation & Maintenance (O&M) Program.
EXECUTIVE SUMMARY

AHC Group Services, LLC (AHC) was retained by Rutgers University to perform an asbestos survey at six of the Russell Apartments buildings. This inspection report provides a thorough identification of asbestos containing materials (ACMs) at Russell Apartments Buildings 3726, 3727, 3728, 3729, 3731 & 3732 located on Busch Campus, New Brunswick, New Jersey. The survey was performed in accordance with 40 CFR Part 763.85 as well as the requirements of Rutgers University. The investigative survey was conducted between February 13th and February 15th, 2017 by an experienced and licensed inspector, James T. Heron.

The types and the estimated quantities of ACM that were found are shown on the table below.

1.0 PURPOSE AND SCOPE OF WORK

ATC Group Services LLC (ATC) was retained by Rutgers University to identify and quantity asbestos-containing materials (ACM) at Russell Apartments Buildings 3726, 3727, 3728, 3729, 3730, & 3732, located on Busch Campus, in Piscataway, New Jersey. This survey was performed to facilitate planned demolition of the buildings. ATC, a Rutgers University approved environmental consultant for asbestos bulk surveys, performed the survey in accordance with 40 CFR Part 763, as well as the requirements of the University.

A total of 30 bulk samples were collected at suspect materials and analyzed via Polarized Light Microscopy. An additional 60 samples were further analyzed via Transmission Electron Microscopy (TEM) (NOB).

2.0 SUMMARY OF FINDINGS

This section discusses our delineation of homogeneous applications of suspect asbestos-containing materials and the results of the related bulk samples that were collected and analyzed. Recommendations concerning these materials are presented in Section 3.0. The following Sections 2.1 and 2.2 summarizes pertinent data about homogeneous applications that were classified as asbestos containing and non-asbestos containing material respectively.

2.1 Materials Classified as Asbestos Containing Materials

The following chart lists the material description and quantities of asbestos containing materials identified in each specific building. Specific locations of these materials for each building can be found in the drawings referenced in Appendix C.

1.0 PURPOSE AND SCOPE OF WORK

ATC was retained by Rutgers, The State University of New Jersey to identify and quantify asbestos-containing materials (ACM) at 11 Bartlett Street located in New Brunswick, New Jersey. The survey was performed prior to planned building demolition. ATC performed the survey in accordance with 40 CFR Part 763.

A total of fifty-five (55) bulk samples of suspect materials were initially collected, all of which were analyzed via Polarized Light Microscopy (PLM). Five (5) of these samples which were non-asbestos via PLM analysis were additionally were submitted for Transmission Electron Microscopy (TEM-NOB) analysis. An additional six (6) bulk samples were collected on April 5, 2017, all of which were analyzed via PLM.

2.0 SUMMARY OF FINDINGS

This section discusses our delineation of homogeneous applications of suspect asbestos containing materials and the results of the related bulk samples that were collected and analyzed. Recommendations concerning these materials are presented in Section 3.0. Sections 2.1 and 2.2 summarize pertinent data about homogeneous applications that were classified as asbestos containing and non-asbestos containing material respectively.

2.1 Materials Classified Asbestos Containing Materials

As shown on the following charts, asbestos-containing materials were identified as follows:

<table>
<thead>
<tr>
<th>Material Description</th>
<th>Location</th>
<th>Classification</th>
<th>Total Estimated Quantity (units)</th>
