EMBARGOED UNTIL RELEASE AT 10:00 A.M. EDT, Thursday, March 31, 2022

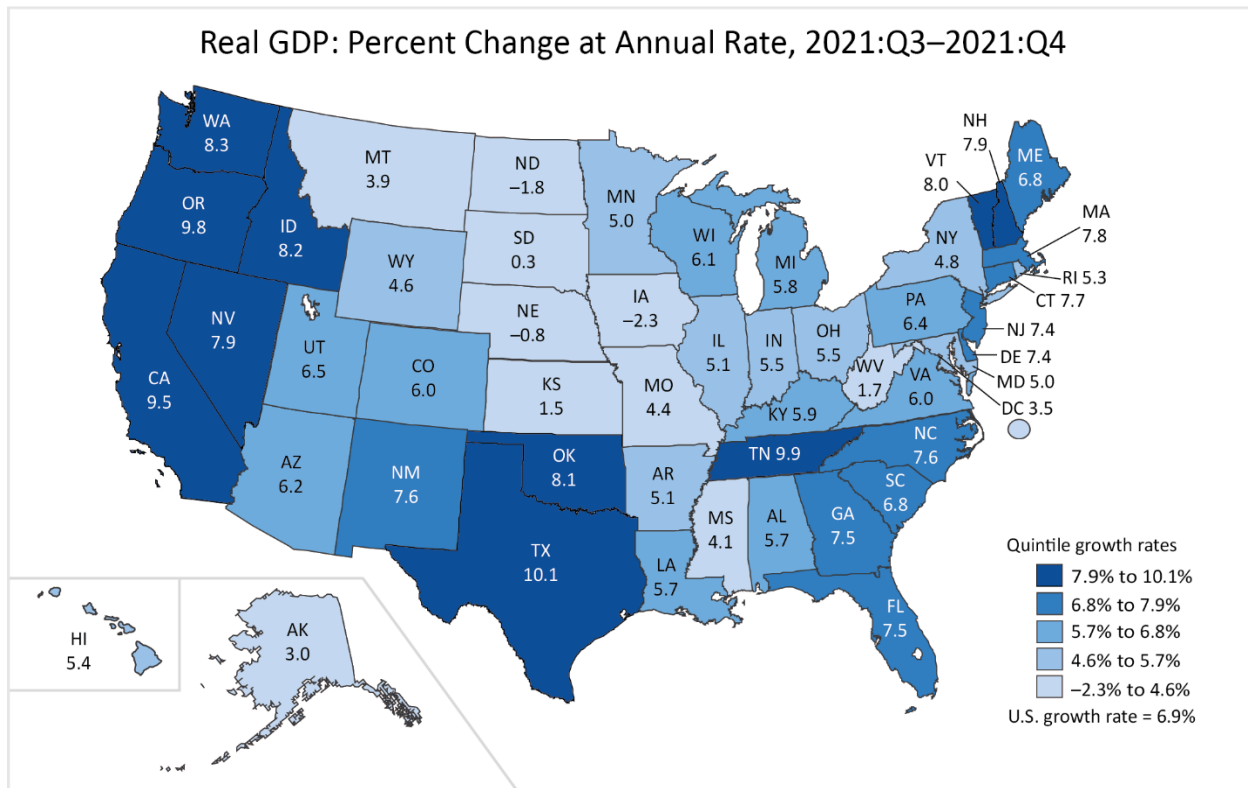

BEA 22-15

Technical: Todd Siebeneck (301) 278-9705 [gdpbystate@bea.gov](mailto:gdpbystate@bea.gov)  
 Catherine Wang (301) 278-9670  
 Media: Jeannine Aversa (301) 278-9003 [Jeannine.Aversa@bea.gov](mailto:Jeannine.Aversa@bea.gov)

## Gross Domestic Product by State, 4th Quarter 2021 and Year 2021 (Preliminary)

*Texas had the largest increase in the fourth quarter*

Real gross domestic product (GDP) increased in 47 states and the District of Columbia in the fourth quarter of 2021, as real GDP for the nation increased at an annual rate of 6.9 percent, according to statistics released today by the U.S. Bureau of Economic Analysis. The percent change in real GDP in the fourth quarter ranged from 10.1 percent in Texas to -2.3 percent in Iowa (table 1).

Real GDP increased in 19 of the 21 industry groups for which BEA prepares quarterly state estimates (table 2). Information services; professional, scientific, and technical services; and real estate and rental and leasing were the leading contributors to the increase in real GDP nationally. Professional, scientific, and technical services was the leading contributor to the increase in Texas, the state with the largest increase.

### Other highlights

- Information services increased 20.1 percent nationally and contributed increases in all 50 states and the District of Columbia. This industry was the leading contributor to the increases in five states including California and Washington, the states with the fourth and fifth largest increases.
- Professional, scientific, and technical services increased 12.3 percent nationally and contributed increases in 49 states and the District of Columbia. This industry was the leading contributor to the increase in six states, including Texas, and the District of Columbia.
- Real estate and rental and leasing increased 7.1 percent nationally and contributed increases in all 50 states and the District of Columbia. This industry was the leading contributor to the increases in eight states including Tennessee and Oregon, the states with the second and third largest increases.
- Agriculture, forestry, fishing, and hunting was the leading contributor to decreases in real GDP in Iowa, North Dakota, and Nebraska.

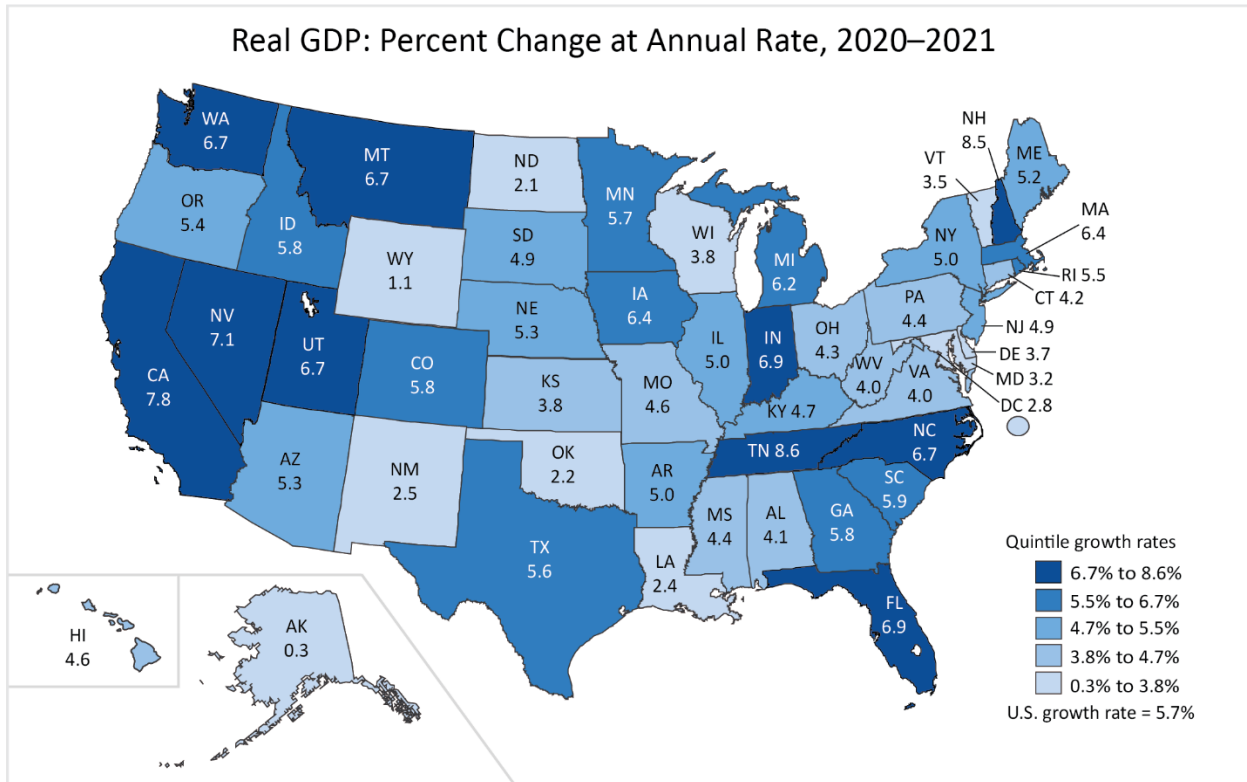

### Coronavirus (COVID-19) Impact on Fourth-Quarter 2021 and 2021 GDP by State Estimates

The fourth-quarter 2021 and 2021 annual estimates of GDP by state reflect the continued economic impacts related to the COVID-19 pandemic. The fourth-quarter estimates reflect an increase in COVID-19 cases resulting in continued restrictions and disruptions in the operations of establishments in some parts of the country. Government assistance payments in the form of forgivable loans to businesses and social benefits to households all decreased as provisions of several federal programs expired or tapered off.

The 2021 annual estimates reflect the continued economic recovery, reopening of establishments, and continued government response related to the COVID-19 pandemic. The full economic effects of the COVID-19 pandemic cannot be quantified in the GDP by state estimates because the impacts are generally embedded in source data and cannot be separately identified. For more information, see [“Federal Recovery Programs and BEA Statistics.”](#)

## GDP by State, Annual 2021

Real GDP increased in all 50 states and the District of Columbia in 2021. The percent change in real GDP ranged from 8.6 percent in Tennessee to 0.3 percent in Alaska (table 4).

U.S. Bureau of Economic Analysis

Finance and insurance; information services; and professional, scientific, and technical services were the leading contributors to the increase in real GDP nationally. Finance and insurance was the leading contributor to the increase in Tennessee, the state with largest increase (table 5).

### Other highlights

- Finance and insurance contributed to the increases in all 50 states and the District of Columbia. This industry was also the leading contributor to the increases in 10 states.
- Information services contributed to the increases in all 50 states and the District of Columbia. This industry was also the leading contributor to the increases in four states including California, the state with the third largest increase.
- Professional, scientific, and technical services contributed to the increases in 49 states and the District of Columbia. This industry was also the leading contributor to the increases in seven states and the District of Columbia.

Next release: June 30, 2022, at 10:00 A.M. EDT  
Gross Domestic Product by State, 1st Quarter 2022

## Additional Information

### Resources

- Information on COVID-19 and recovery impacts is available on our [website](#).
- Stay informed about BEA developments by reading [The BEA Wire](#), signing up for BEA's [email subscription service](#), or following BEA on Twitter [@BEA\\_News](#).
- Historical time series for these estimates can be accessed in BEA's [Interactive Data Application](#).
- Access BEA data by registering for BEA's [Data Application Programming Interface](#).
- For more on BEA's statistics, see our monthly online journal, the [Survey of Current Business](#).
- BEA's [news release schedule](#).
- BEA Regional Facts ([BEARFACTS](#)): a narrative summary of personal income, per capita personal income, components of income, and gross domestic product for counties, metropolitan statistical areas, and states.
- Complete information on the sources and methods for the estimation of [BEA's Gross Domestic Product by State](#).

### Definitions

**Gross domestic product (GDP) by state** is the market value of goods and services produced by the labor and property located in a state. GDP by state is the state counterpart of the nation's gross domestic product, the Bureau's featured and most comprehensive measure of U.S. economic activity.

**Current-dollar statistics** are valued in the prices of the period when the transactions occurred—that is, at “market value.” Also referred to as “nominal GDP” or “current-price GDP.”

**Real values** are inflation-adjusted statistics—that is, these exclude the effects of price changes.

**Contributions to growth** are an industry's contribution to the state's overall percent change in real GDP. The contributions are additive and can be summed to the state's overall percent change.

### Statistical conventions

**Seasonal adjustment and annual rates.** Quarterly values are expressed at seasonally adjusted annual rates. For

details, see the FAQ [“Why does BEA publish estimates at annual rates?”](#)

**Quantities and prices.** Quantities, or “real” measures, are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). “Real” dollar series are calculated by multiplying the quantity index by the current dollar value in the reference year and then dividing by 100. Percent changes calculated from chained-dollar levels and quantity indexes are conceptually the same; any differences are due to rounding.

**Chained-dollar values** are not additive, because the relative weights for a given period differ from those of the reference year.

Chained-dollar values of GDP by state are derived by applying national chain-type price indexes to the current dollar values of GDP by state for the 21 North American Industry Classification System-based industry sectors. The chain-type index formula that is used in the national accounts is then used to calculate the values of total real GDP by state and real GDP by state at more aggregated industry levels. Real GDP by state may reflect a substantial volume of output that is sold to other states and countries. To the extent that a state's output is produced and sold in national markets at relatively uniform prices (or sold locally at national prices), real GDP by state captures the differences across states that reflect the relative differences in the mix of goods and services that the states produce. However, real GDP by state does not capture geographic differences in the prices of goods and services that are produced and sold locally.

### BEA regions

BEA groups all 50 states and the District of Columbia into 8 distinct regions for purposes of presentation and analysis as follows:

**New England** (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont)

**Mideast** (Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania)

**Great Lakes** (Illinois, Indiana, Michigan, Ohio, and Wisconsin)

**Plains** (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota)

**Southeast** (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia)

**Southwest** (Arizona, New Mexico, Oklahoma, and Texas)  
**Rocky Mountain** (Colorado, Idaho, Montana, Utah, and Wyoming)  
**Far West** (Alaska, California, Hawaii, Nevada, Oregon, and Washington)

### Uses of GDP by state statistics

GDP by state statistics provide a framework for analyzing current economic conditions in each state and can serve as a basis for decisionmaking. For example:

- Federal government agencies use the statistics in forecasting models to project energy and water use.
- State governments use the statistics to project tax revenues and the need for public services.
- Academic regional economists use the statistics for applied research.
- Businesses, trade associations, and labor organizations use the statistics for market research.
