2009 Population Estimates for New Jersey by County and Metropolitan Area

by Sen-Yuan Wu, Division of Labor Market and Demographic Research

New Jersey's total resident population was 8,707,739 as of July 1, 2009. The net gain of 44,341 residents from a year ago was the 16th largest in the nation. However, its 0.51 percent annual growth rate between 2008 and 2009 was slower than 37 other states. With 1,174 persons per square mile, New Jersey's distinctive status as the nation's most densely populated state remains unchallenged. The "2009 State Population Estimates" article was published on the January 2010 issue of the *New Jersey Economic Indicators* (pp. 1-3). This article presents data on population changes in New Jersey by county and metropolitan area.

Somerset and Hudson Led the State's Population Growth, 2008-2009

Somerset was the fastest growing county in New Jersey with a 1.1 percent net gain of resident population between 2008 and 2009, followed by Hudson (+1.0%), and Union (+0.9%). Numerically, Hudson County added more residents (+5,800) than any other county in the state during the 2008-2009 period, followed by Middlesex (+5,400) and Bergen (+5,300) counties.

Three counties experienced population declines from 2008 to 2009: Cape May (-0.4% or -400), Sussex (-0.2% or -300), and Warren (-0.2% or -300).

Nationally, St. Bernard Parish, LA was the population growth champion (+7.9%) between 2008 and 2009 among the nation's 2,431 counties with 10,000 or more population. Long County, GA's 7.2 percent growth rate was the second fastest in the nation. Population declined in 1,370 counties between 2008 and 2009. The net loss of 23,200 residents in Wayne County, MI was the most severe.

Ocean County had the Largest Population Gain, 2000-2009

Ocean County led population growth numerically in the state during this decade. The county added 62,800 residents since the 2000 Census. The 2000-2009 population gain was also very substantial in Middlesex (+40,600), and Gloucester (+34,200) counties. However, Ocean County's 12.3 percent rate of growth between 2000 and 2009 was second to Gloucester's 13.4 percent, while Somerset County had the state's third fastest rate of growth (9.9%).

During the 2000-2009 period, Cape May (-6,200 or -6.1%), Essex (-22,700 or -2.9%) and Hudson (-11,100 or -1.8%) counties experienced population declines.

Between 2000 and 2009, Kendall, IL was the nation's fastest growing county with a population gain of 92.1 percent, followed by Pinal County, AZ (+89.7%). Maricopa County, AZ, had the largest numeric increase from 2000 to 2009, adding 950,964 residents. The net gain of 670,399 population in Harris, TX was the nation's second largest.

Table 1

Estimates of Resident Population by County: New Jersey, 2000 to 2009							
Region/County	Census on April 1, 2000	Estimates as of July 1,		Changes: 2008-2009		Changes: 2000-2009

Cape May County Experienced Population Loss Due to Natural Decrease

Cape May was the only county in New Jersey to experience population loss due to natural increment between 2008 and 2009 as the number of deaths exceeded births by 400. From 2000 to 2009, the county had a total natural decrease of about 3,000 persons. In contrast, Essex (+47,500) and Middlesex (+45,600) counties had the most substantial gains due to natural increase (surplus of births over deaths) between 2000 and 2009.

Cape May County was not alone. Among the nation's 3,143 counties, 853 experienced a natural decrease of population between 2000 and 2009, led by Florida's Pinellas County (-25,300) and Sarasota County (-17,200). In contrast, the natural increase of 849,100 in Los Angeles County, CA was the nation's largest.

International Immigration as a Major Source of Population Growth

All 21 counties in New Jersey gained international immigrants between 2008 and 2009. In fact, the population in Camden, Essex, Hudson and Morris counties would have declined were there no influx of foreign immigrants. Population loss due to domestic migration in these four counties (-18,700) was larger than their natural increment (+15,500), but was compensated by their gains from international migration (+14,800).

Table 2

Components of Population Change by County: New Jersey, 2000 to 2009								
Region/ County	Components of Change: 2008 to 2009				Components of Change: 2000 to 2009			
	Births	Deaths	International Migration	Domestic Migration	Births	Deaths	International Migration	Domestic Migration
New Jersey	110,471	71,676	37,360	-31,690	1,038,937	664,523	399,803	-459,803

Salem	841	710	70	-42	6,976	6,525	639	1,389

Note: The sum of estimated components of population change may not equal the total numerical change due to a small residual resulted from controlling all counties' estimates to the national total.

Source: US Bureau of the Census, Population Division, March 2010

Only three counties (Gloucester, Ocean and Somerset) had a net gain of population from other counties in the US during the most current one-year period. Consequently, eight counties suffered from net population losses due to migration – Burlington, Camden, Essex, Hunterdon, Morris, Passaic, Sussex and Warren – as their gains in international migration were not large enough to offset their losses from domestic migration between 2008 and 2009.

Hudson County had the state's largest influx of international immigrants (+68,100) from 2000 to 2009, but also experienced the most substantial loss due to domestic migration (-113,900). Middlesex, Bergen and Essex counties also had considerable gains in international migration, so far in this decade, while Ocean County had the most substantial gain due to domestic migration (+53,100), among the state's 21 counties.

Nationally, the counties of Los Angeles, CA (+651,200) and Miami-Dade, FL (+328,700) gained the largest number of immigrants from abroad between 2000 and 2009. Onslow County, NC had the most substantial loss due to international immigration (-4,600). The international outflow of population was greater than inflow in 201 counties during the 2000-2009 period.

Maricopa County, AZ had the largest net gain of domestic migration (+416,500) between 2000 and 2009, followed by Riverside County, CA (+384,100). The majority (1,818) of the nation's 3,143 counties lost population to other counties due to migration between 2000 and 2009. The most severe net loss was found in Los Angeles County, CA (-1,125,800).

Bergen Still the Most Populous County in New Jersey

Bergen continued to be the most populous county in New Jersey. Its population size of 895,250 ranked 55th among the nation's 3,143 counties in 2009. Three other New Jersey counties were also on the nation's 100 largest counties list: Middlesex (70th), Essex (73rd) and Monmouth (93rd).

Salem County remained the state's least populous county with just over 66,300 residents as of 2009. Due to a gradual population decline so far in this decade, Cape May County saw its population fall below the 100,000 level after 2003. The ranking of county population size in New Jersey remained unchanged from 2008 to 2009. However, Middlesex County replaced Essex as the state's second most populous county in 2006, while Union and Ocean counties swapped their 6th and 7th places in 2002. Sussex briefly surpassed Cumberland in 2002, 2003 and 2004, but their population rankings have reverted back to 17th and 16th, respectively, since 2005.

With more than 9.8 million population, Los Angeles, CA continued to be the nation's largest county. There were 40 other counties with at least one million residents, as of July 1, 2009. Loving, TX (population: 45) was the smallest county in the nation. Kalawao, HI (population: 83) was the only other county with less than 100 residents.

Population Little Changed in the State's Northern Region

Population in the state's industrialized Northern Region (Bergen, Essex, Hudson, Morris, Passaic and Union counties) was flat (net gain of 1,000 residents) between 2000 and 2009 as the substantial population losses in Essex and Hudson counties were offset by population gains in the other four counties. Morris (+3.9%) was the only county in the region to experience a

higher-than-state-average growth rate (+3.5%). The region's population turned around recently from a gradual decline between 2002 and 2007.

Nearly two-thirds (63%) of the 399,800 foreign immigrants who arrived in New Jersey during the 2000-2009 period settled in these six urban counties. However, every county in the region experienced a substantial loss of residents due to domestic migration. Together, the region lost 459,800 residents to other counties in the nation, resulting in a net population loss of 178,700 due to geographic mobility between 2000 and 2009. The loss was largely compensated for by the region's net gain in natural increase (surplus of births over deaths). Essex (+47,500), Hudson (+38,600) and Passaic (+34,700) counties had the state's first, third and fourth largest natural increases, respectively, during the 2000-2009 period, due partly to a high concentration of new immigrants and minority groups in these counties.

Growth Slowed in Northwest Region

Population growth in the state's two Northwestern rural counties (Sussex and Warren) lost its steam after 2008, with a -0.2 percent decline between 2008 and 2009, for the first time since 1920. The region's 2000-2009 population growth rate (5.7%) was still higher than the state average, but lagged behind all other regions except the northern region. These two counties gained population from both the net migration (3,400 international immigrants and 2,500 domestic migrants) and natural increase (9,600) between 2000 and 2009. Their share of the state's total population has increased somewhat from 2.9 percent in 2000 to 3.0 percent in 2009.

Substantial Population Growth in Central Jersey

The Central Jersey Region (Hunterdon, Mercer, Middlesex and Somerset counties) had a numeric population gain of 93,500 from 2000 to 2009. These four counties accounted for 32.0 percent of the state's total numerical gains since the 2000 Census. The major sources of the region's 2000-2009 growth were net gains in international migration (93,900) and natural increase (approximately 85,700 more births than deaths).

With the exception of Hunterdon, the counties in the region experienced net losses in domestic migration so far in this decade. However, these losses were more than offset by their hefty gains in international migration.

Coastal Counties Were the State's Population Magnet

The four counties along New Jersey's Atlantic coast – Atlantic, Cape May, Monmouth and Ocean – had the largest population growth (+104,500) and highest growth rate (+7.1%) in New Jersey from 2000 to 2009. The region attracted more migrants (34,600 from domestic migration and 30,500 from international immigration) than any other region in the state. This region alone accounted for 36.0 percent of the state's total numerical population increase between 2000 and 2009. Natural increase (+30,400) was relatively moderate in the region due to the high proportion of elderly residents in Cape May and Ocean counties.

Population Growth Accelerated in the Southern Region

The four New Jersey counties that are part of the Philadelphia Metropolitan Area (Burlington, Camden, Gloucester and Salem) plus their southern neighbor – Cumberland County – had a below-average population growth rate during the 1990s. The annual growth rate was higher in the region than in the state as a whole between 2000 and 2007, but had fallen below average after 2007. The region's 5.7 percent growth between 2000 and 2009 was still faster than the statewide average (+3.5%), due largely to hefty growth in Gloucester (+13.4%) and Cumberland (+7.7%) counties.

In addition to natural increment (+51,500), the region's net gain from migration (+30,300) was also substantial. Camden was the only county in the region to experience population loss from migration as its loss in domestic migration (-22,000) was more substantial than its gain in international immigration (+9,500).

Seven Metropolitan Areas Encompass New Jersey Counties

According to the US Census Bureau, *"The United States Office of Management and Budget (OMB) defines metropolitan and micropolitan statistical areas according to published standards that are applied to Census Bureau data. The general concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Each metropolitan statistical area must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population."*

New Jersey was the nation's first state to become 100 percent metropolitan in 1980. The state's 21 counties were part of seven metropolitan areas as of 2009. There is no micropolitan area in New Jersey.

The 257.4 million people resided in the nation's 366 metropolitan areas accounted for 83.8 percent of the total US population as of 2009, up from 82.8 percent in 2000. The Northeast Region had the highest proportion (90.4%) while the Midwest Region had the lowest percentage (77.4%) of their population residing within the boundary of metropolitan areas. However, metropolitan population grew the slowest in the Northeast Region (3.4% between 2000 and 2009), while the South Region had the fastest growth (15.4%) in metropolitan population.

Based on the 2009 estimates, the Allentown-Bethlehem-Easton Metropolitan Area had the highest rate of population growth (+10.2%) among the seven metropolitan areas that encompass New Jersey counties. The area includes Warren County and three other Pennsylvania counties. It gained population mainly from domestic migration (+46,300) from 2000 to 2009.

The Vineland-Millville-Bridgeton Metropolitan Area (encompasses only Cumberland County) was the second fastest growing area (7.7% from 2000 to 2009), followed by the Atlantic City-Hammonton Metropolitan Area (consists solely of Atlantic County). Population in this area grew by 7.6 percent between 2000 and 2009.

The Trenton-Ewing Metropolitan Area consisting of Mercer County only, had a moderate gain of population (+4.4%) from 2000 to 2009. The Ocean City Metropolitan Area (com-

prised of Cape May County) was the only area in New Jersey to experience a population decline (-6.1%) due to more deaths than births and more losses to domestic migration than gains from international migration.

Table 3

Estimates of Population and Components of Change by Metropolitan Area/Division: New Jersey, 2000 to 2009							
Name of Metropolitan Area/Division	Census 2000	Estimates 2009	Population Change: 2000-2009		Components of Change: 2000-2009

The Nation's Largest Metropolitan Area Includes 12 New Jersey Counties

The New York-Northern New Jersey-Long Island Metropolitan Area was the nation's largest metro area, with 19.1 million residents (up 4.1% from 18.3 million in 2000). The area includes four metropolitan divisions – three of them comprise numerous New Jersey counties. Its largest division – New York-White Plains-Wayne Metropolitan Division (contains New Jersey's Bergen, Hudson and Passaic counties and eight other New York State counties) had more than 11.7 million residents as of 2009. The division's population increased a moderate 3.8% between 2000 and 2009, due to its substantial loss in domestic migration. The Edison-New Brunswick Metropolitan Division (constituted of four New Jersey counties – Middlesex, Monmouth, Ocean and Somerset) grew faster than any other divisions in the area (7.4% from 2000 to 2009). The Newark-Union Metropolitan Division contains the highest number (five) of New Jersey counties (Essex, Hunterdon, Morris, Sussex and Union). Population grew slowly in this division (1.4% since the 2000 Census) due to its net loss in migration as out-migration to other counties outpaced the influx of immigrants.

Los Angeles-Long Beach-Santa Ana, CA was the only other metropolitan area with more than 10 million population as of 2009. The population size of the nation's smallest metropolitan area — Carson City, NV was just 55,200.

Population Grew Fast in South Jersey's Two Metropolitan Areas

With a population of more than 5.9 million, the Philadelphia-Camden-Wilmington Metropolitan Area was the nation's fifth largest area, as of 2009. Two of the area's three divisions encompass New Jersey counties: the Camden Metropolitan Division is an aggregate of three counties – Burlington, Camden and Gloucester; the Wilmington Metropolitan Division includes New Jersey's Salem County, a county in Delaware and another one in Maryland. Population in both divisions grew substantially from 2000 to 2009 (+5.6% and +7.9%, respectively) due to their gains from natural increment as well as both domestic and international migrations.

Data Availability

The 2009 county and metropolitan area population estimates for New Jersey, including components of change, are available online at the Office of Labor Planning and Analysis' web site (http://lwd.dol.state.nj.us/labor/lpa/dmograph/est/est_index.html). For more information regarding population estimates for New Jersey, contact the New Jersey Department of Labor and Workforce Development, Division of Labor Market and Demographic Research, P. O. Box 388, Trenton, NJ 08625-0388, telephone 609-292-0076, e-mail: sywu@dol.state.nj.us.

Economic Situation: The Nation

Data for the first quarter of the year suggest a moderate expansion in the level of economic activity. Retail sales have been up and indicators suggest that the labor market has stabilized and may be ready to expand in the months ahead. Still, unemployment rates are expected to remain high for the near-term. Industrial production has been growing but capacity utilization is still much below its longer term averages. Residential real estate, however, has flattened out in recent months. Building permits in March were surprisingly strong. The advance GDP estimates for the first quarter of this year, due out on April 30, will better clarify the state of the economy.

Nonfarm employment added 162,000 jobs in March, the largest gain since March 2007, when 239,000 jobs were created. The March estimate benefitted from a gain in government employment, resulting largely from the hiring of temporary Census workers. For the month, private sector employers added 123,000 jobs while public sector employers added 39,000. Nonfarm payroll employment has shown signs of stabilizing

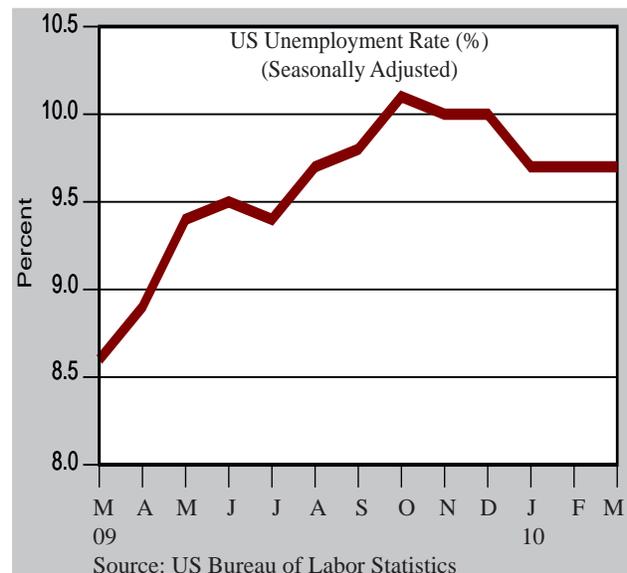

in recent months, following 22 consecutive monthly declines from January 2008 through October of last year.

March private sector employment gains were widespread, with only two industries, information and financial activities, losing jobs. The largest gains occurred in education and health services (+45,000) and leisure and hospitality (+22,000). Both construction (+15,000) and manufacturing (+17,000), which have suffered huge losses in the recession, had March gains.

In March, the national unemployment rate remained at 9.7 percent for the third straight month. The rate had peaked at 10.1 percent in October of 2009. Also in March, the male unemployment rate was down to 10.0 percent after peaking at 10.4 percent in November. The female unemployment rate declined to 8.0 percent after reaching 8.2 percent in December.

Despite the stable rate, the number of unemployed increased in March to back over 15 million after declining from a November peak of 15.3 million. The increase is due to increasing labor force participation. The labor force participation rate has increased by 0.1 percent in each of the last three months, suggesting that perhaps job seekers are beginning to feel more optimistic. A broader measure of unemployment, which accounts for discouraged workers and part-time employees, was down to 16.9 percent in March, after reaching 17.3 percent last December.

The University of Michigan's consumer confidence index for April showed an unexpected decline. Declining confidence was ev-

Economic Situation: The Nation

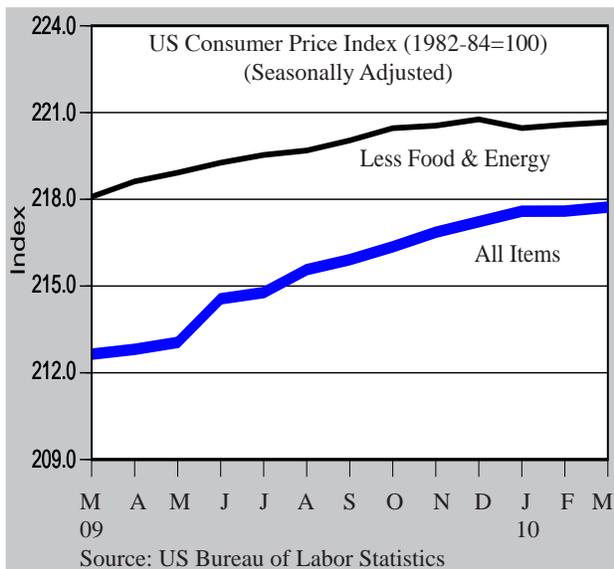

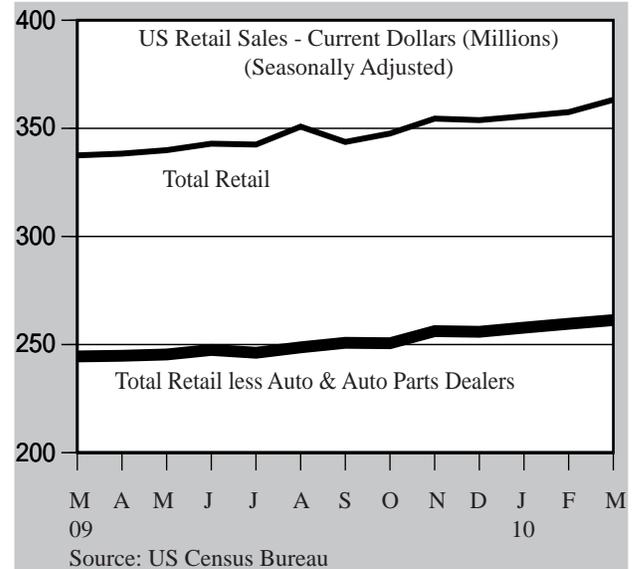

ident in both current conditions and the outlook for future conditions. The negative report may be due to the perception on the part of consumers that the recovery is too slow.

Despite the decline in consumer confidence, March retail sales were up 1.6 percent over the month and 7.6 percent over the year. Sales by motor vehicle and parts dealers were up by 6.7 percent. Excluding motor vehicle and parts, sales were up a more modest 0.6 percent. Building material & garden equipment sales and clothing & clothing accessories sales were also higher, with gains of 3.1 percent and 2.3 percent, respectively. The March gain was the third consecutive monthly gain and the fifth in the last six months.

Realty Trac reported that foreclosures in the first quarter of this year were up 7.0 percent from the fourth quarter of last year and 16.0 percent from a year ago. Ten states account for more than 70.0 percent of the nation's total. California alone accounts for 23.0 percent. Rounding out the top five, Florida, Arizona, Illinois and Michigan all continue to have a large number of foreclosures.

The Census Bureau reported that total construction spending in February was a seasonally adjusted, annualized \$846.2 billion, down 1.3 percent from January and 12.8 percent from February 2009. For the first two months of this year, spending is down 14.4 percent over the depressed level of a year ago. The February level is the lowest since February 2002.

New residential construction in March showed that building permits were up 7.5 percent from February and a robust 34.1 percent from March a year ago. The March estimate, 685,000 units on an annualized basis, is the highest total since October of 2009 when 729,000 permits were issued. The estimate is especially impressive given the winter storms that impacted much of the country during February and March. In March, housing starts were up 1.6 percent over the month and 20.2 percent over the year. Housing units completed were down 3.1 percent over the month and 21.2 percent from a year ago.

The estimate is especially impressive given the winter storms that impacted much of the country during February and March. In March, housing starts were up 1.6 percent over the month and 20.2 percent over the year. Housing units completed were down 3.1 percent over the month and 21.2 percent from a year ago.

The Consumer Price Index (CPI) confirmed that prices continue to remain flat. The March CPI showed a modest increase of 0.1 percent, the seventh straight month where the index has increased by 0.2 percent or less. In February, the index was unchanged. Since last March, the index is up by 2.3 percent. The core rate of inflation, which excludes volatile food and energy costs, increased by only 1.1 percent.

Economic Situation: The State

As in the national labor market, there are emerging signs of improvement in New Jersey's job market. Recent employment losses in New Jersey are smaller than those in the first half of last year and the unemployment rate appears to have peaked. However, unemployment rates in both the nation and state could easily rise if a recovering economy results in

a surge in labor force growth as discouraged workers and new entrants swell the labor force. New Jersey and the Northeast did not share in the surge in March building permits that occurred nationally. This may be due in part to bad weather in February and March.

New Jersey nonfarm payroll employment declined by 3,100 jobs in March, following a gain of 3,200 in February and a loss of 9,000 in January. State employment levels, like those nationally, are showing signs of stabilizing. In the first quarter of 2009, monthly employment losses averaged 19,300. In the first quarter of this year, monthly losses averaged only 3,000. In fact, starting in February of 2008, New Jersey had 20 consecutive months of employment declines. The losing streak ended in October with the addition of

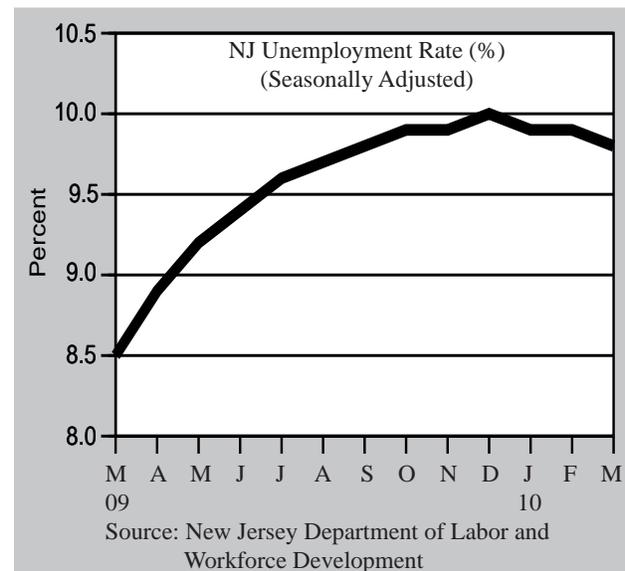

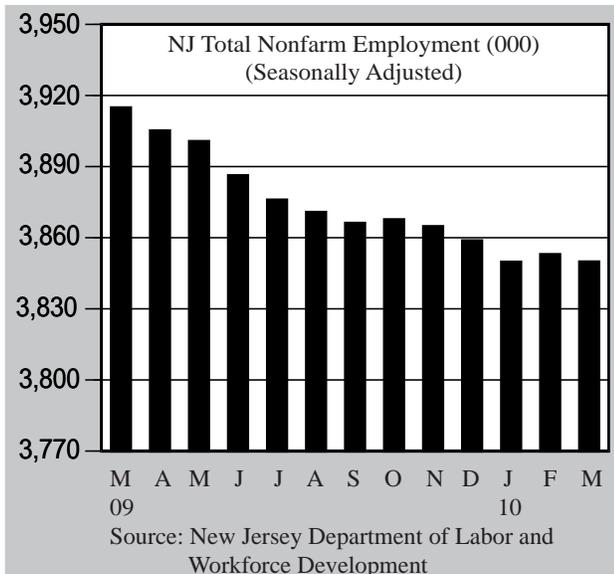

1,500 jobs. Through the first quarter of this year, nonfarm payroll employment in the state is down 2.1 percent, compared with 2.4 percent nationally.

In March, private sector employment was down 600 jobs while public sector employment was down 2,500. The public sector job losses were concentrated in local government employment which was down 2,300 for the month. March construction employment was up 1,600 while manufacturing employment declined by 3,400.

Trade, transportation & utilities gained 2,500 jobs, with transportation & warehousing up by 1,700 and retail trade up by 900. Financial activities added a modest 300 jobs; however, employment is still down 12,200 from March a year ago. Professional & business services shed 800 jobs and is down 13,200 from a year ago. Education & health services experienced a rare monthly decline but is still up 10,300 jobs over the year. In fact, education & health services is the only major industry for which employment is higher over the year.

New Jersey's unemployment rate declined slightly from 9.9 percent in both January and February to 9.8 percent in March. The rate had peaked at 10.0 percent in December and has since trended down. The March rate is at the lowest level since September of last year when the rate was 9.8 percent.

In March, both labor force and resident employment each rose by approximately 9,600 while the number of unemployed re-

Economic Situation: The State

maintained the same. The labor force participation rate increased slightly from 66.8 percent to 66.9 percent, suggesting that jobseekers are reentering the labor force as job prospects improve. While the recent numbers do suggest improving labor market conditions, the unemployment rate may rise again if the labor force grows faster than new entrants can be accommodated.

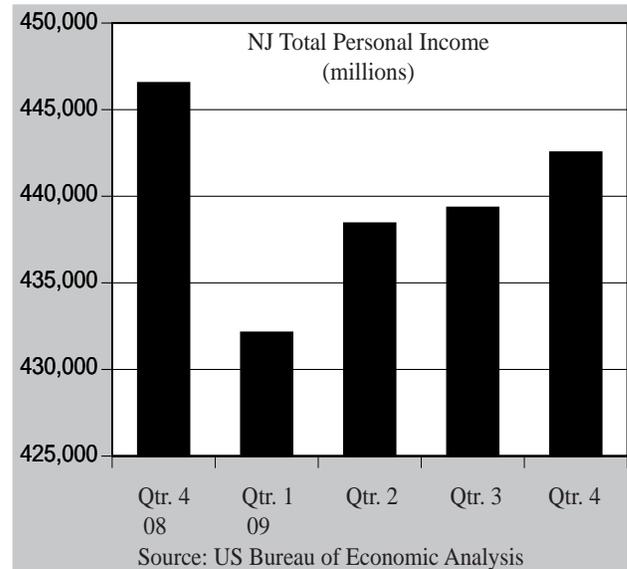

Fourth quarter 2009 total personal income was up 0.7 percent in New Jersey and up 0.9 percent in the nation as the economy emerged from the low point of the recession. For the year, 2009 personal income was down 1.8 percent in the state and 1.7 percent nationally. Among neighboring states, personal income in New York, in part due to weakness in financial services, was down 3.4 percent and a modest 0.2 percent in Pennsylvania.

Per capita personal income in 2009 declined in both the nation and state. Nationwide, per capita personal income declined from \$40,166 in 2008 to \$39,138 in 2009, a decrease of 2.6 percent. In New Jersey, per capita personal income declined by 2.3 percent from \$51,473 in 2008 to \$50,313 in 2009.

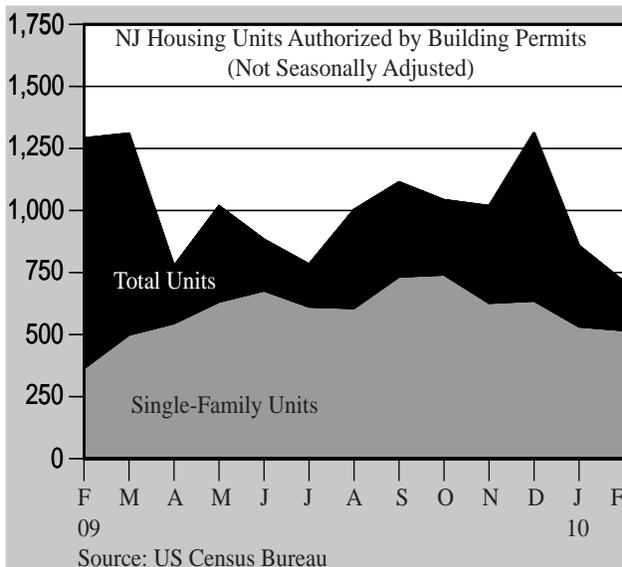

New Jersey continued to rank second nationally, behind Connecticut, in per capita personal income. Connecticut's per capita personal income was down 3.3 percent.

Building permits in February continued to decline. The February count, 711, was down from 856 in January and, for the first two months of the year, are down 21.4 percent over the levels of a year ago. Permits for single family units were down 32.7 percent in February while units housing five or more families were down 60.5 percent.

Building permits in the Northeast region continued to lag. In the Northeast, permits were down 19.5 percent, in sharp contrast to the national increase. March permits were up in the Midwest and South but down somewhat in the West. The data suggest that the low levels in New Jersey and the Northeast are a reflection of the unusually severe weather that affected this

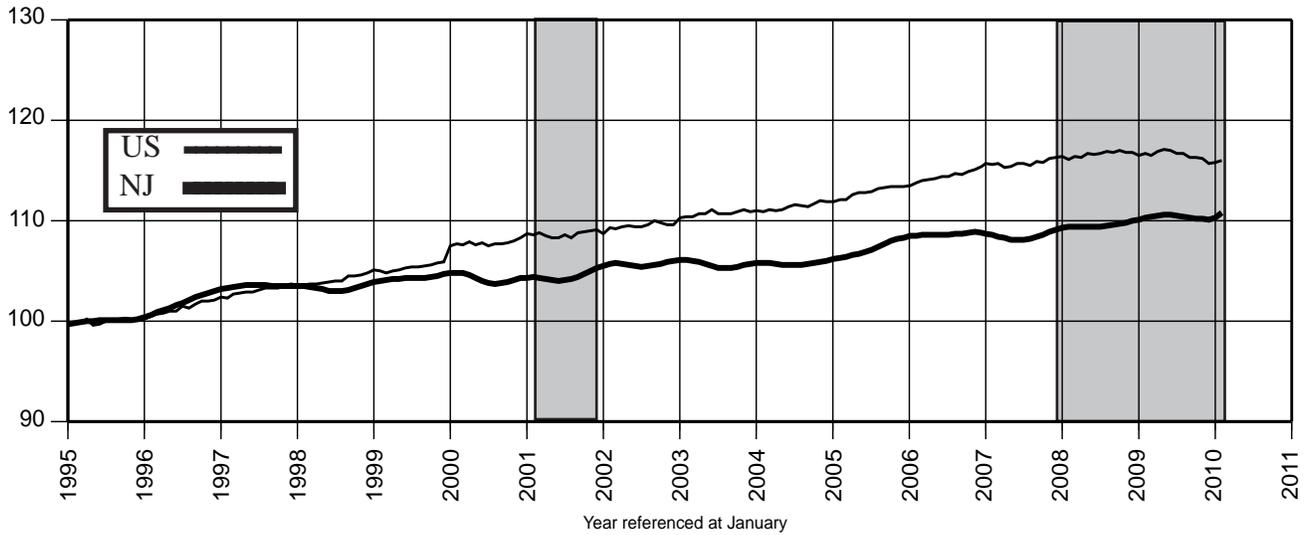

part of the country in February and March. Housing starts in the Northeast were down 8.3 percent over the month and 4.3 percent over the year. Housing completions were also down sharply in the region, 33.7 percent in March and 21.9 percent over the year.

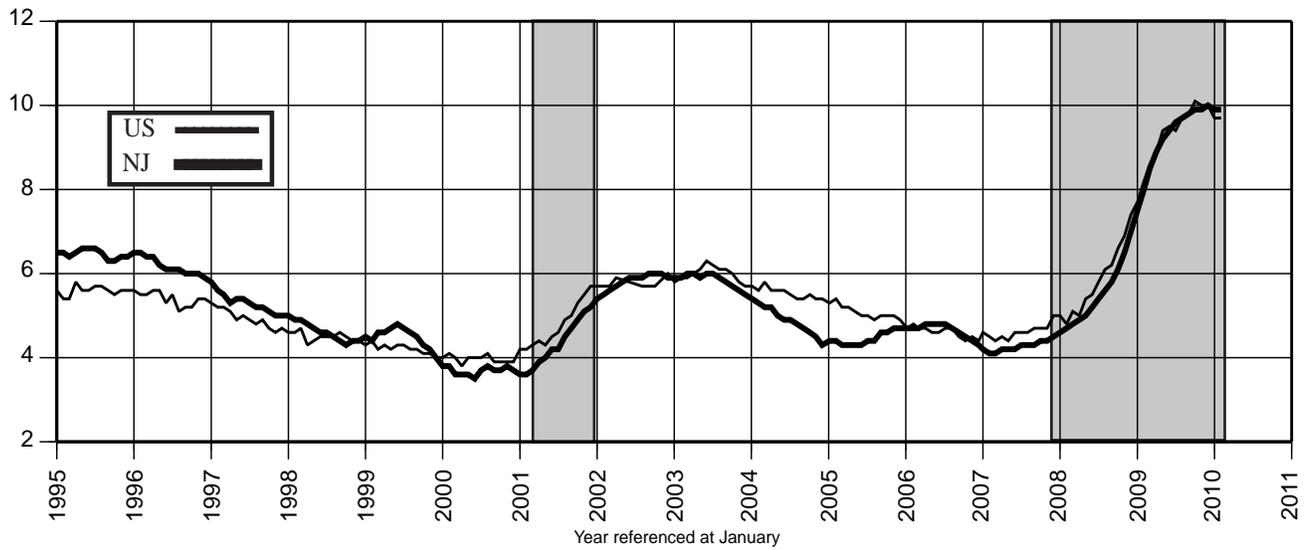

Regional data from the Consumer Price index shows that there continues to be no evidence of inflationary pressures in the northern New Jersey/New York and southern New Jersey/Philadelphia regions. From December through February, the northern New Jersey/New York region saw a modest increase of 0.2 percent. In the southern New Jersey/Philadelphia region, prices were up 0.8 percent.

Northern Region

A new soccer stadium, Red Bull Arena, opened in Harrison (Hudson County) on March 20, 2010 bringing approximately 500 jobs, most of which are part-time, to the area.

Birds Eye Foods, which was recently purchased by New Jersey-based Pinnacle Foods, is closing its Brighton, NY location and plans to relocate the operations to either Mountain Lakes (Morris County) or Cherry Hill (Camden County), in mid-2010.

Warner Chilcott, a pharmaceutical company, is closing its Mason, Ohio facility. An unknown number of the 163 workers will be offered an opportunity to relocate to the company's U.S. headquarters in Rockaway, (Morris County).

Southern Region

In March 2010, Boeing opened a plant at the Millville Airport (Cumberland County) to retrofit military helicopters. The facility employs 25 and could expand to 100 workers by the end of 2011.

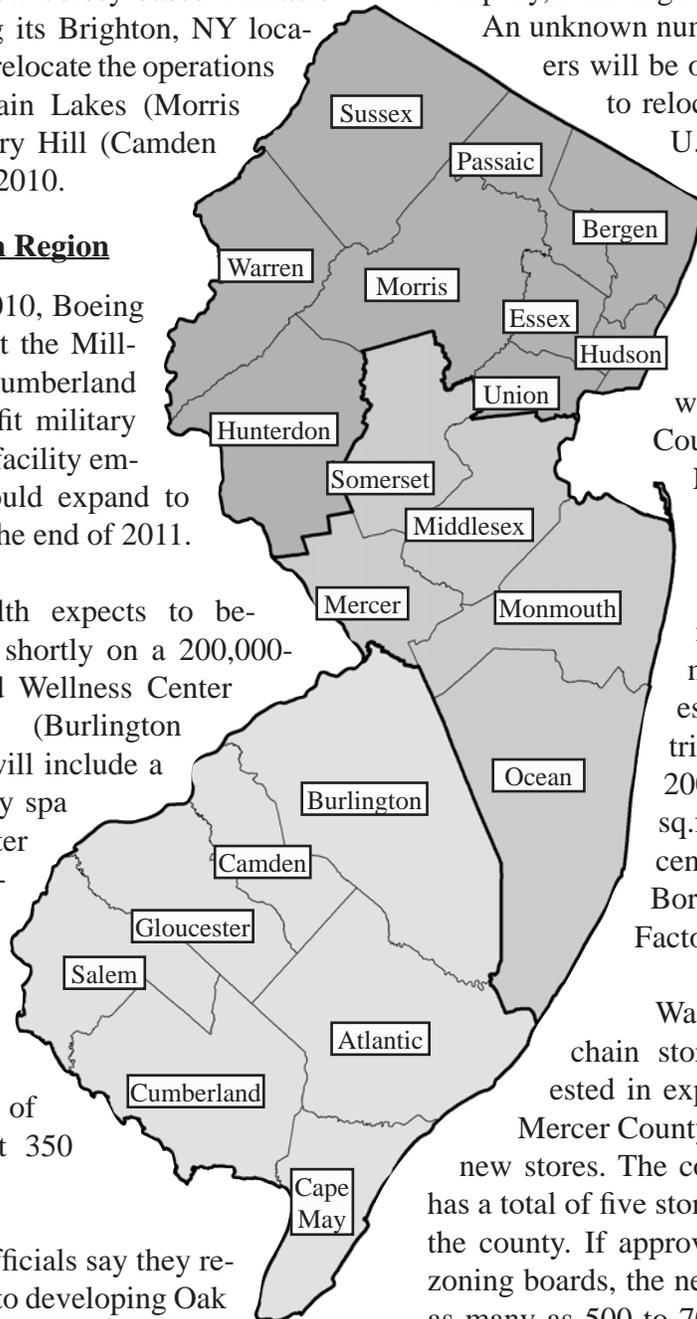

Virtua Health expects to begin construction shortly on a 200,000-sq.ft. Health and Wellness Center in Moorestown (Burlington County) which will include a fitness center, day spa and daycare center in addition to offering a variety of outpatient medical services. It is expected to open in the summer of 2011 with about 350 employees.

Wal-Mart officials say they remain committed to developing Oak Tree Plaza, a 244,000-sq.ft. shopping center in Egg Harbor Township (Atlantic County). In addition to the Wal-Mart, the shopping center includes several small retail stores, three fast food restaurants and a bank.

Central Region

Freehold Raceway Mall (Monmouth County) is revamping its Nordstrom wing and shuffling stores as part of a move which will bring four retailers, including H&M to the mall. This is the largest project and redistribution of stores since 2007, when a 96,000-sq.ft. outdoor lifestyle center, which includes Borders and Cheesecake Factory, was constructed.

Wawa, the convenience chain store operator, is interested in expanding operations in Mercer County by building 10 to 12 new stores. The company currently has a total of five stores located throughout the county. If approved by the applicable zoning boards, the new stores could create as many as 500 to 700 new jobs. Another convenience store, Quick Chek, is constructing a new store and gas station along Route 130 North in South Brunswick, Middlesex County. When completed, the store could employ between 30 and 40 workers.

Notes:

1. Nonfarm payroll employment includes civilians on nonfarm establishment payrolls who worked or received pay for any part of the pay period including the 12th of the month. It excludes proprietors, self-employed, unpaid family members and domestics in private households. All data are revised to March 2009 benchmarks. Individual series may not add to sector or supersector totals because not all sector/supersector components are published.
2. "Other Services" include: Repair and maintenance; Personal and laundry services; Religious, grantmaking, civic, professional and similar organizations.
3. The total number of state employees reported under this heading is determined on the basis of a definition developed by the US Bureau of Labor Statistics which is standardized throughout the nation. The definition includes both full- and part-time workers in the executive departments, the legislature, and the judiciary, as well as all employees of authorities, commissions, the state universities and colleges, and other agencies not included on the central payroll.

* Seasonally adjusted total has been indirectly computed from the sum of the underlying industries.

** The industry is not seasonally adjusted because seasonality is not statistically significant.

* Eight manufacturing production series were deleted because these series failed to meet the criteria established by the Bureau of Labor Statistics and will no longer be published.

- (1) Average hours worked or paid are affected by labor turnover, changes in overtime hours and part-time employment.
- (2) Hourly earnings include paid holidays, vacation and sick leave. They are affected by changes in workforce composition and in wage rates.
- (3) Weekly earnings are affected by premium pay, shift differentials, piecework and incentive payments, length of workweek and other factors.
- (4) Non-supervisory workers. The Information Supersector includes the Publishing Industries, Telecommunications, and Internet Service Providers, Web Search Portal, and Data Processing Service Sectors.

Government	2.6	2.6	2.6	-2.3	-0.2

Notes: Totals may not add due to seasonal adjustment, rounding and differences in the availability of data.

* Not seasonally adjusted

Adjustment of Data

Seasonal Adjustment. All tables/charts, unless otherwise specified, contain data that are seasonally adjusted using the **X-12 ARIMA** (Auto-Regressive Integrated Moving Average) method of seasonal adjustment developed by Statistics Canada.

The **X-12** procedure was used in a “two-step” process. One set of factors was generated for benchmarked estimates, based on absolute or universe counts of employment determined through Unemployment Insurance records. These factors were used to seasonally adjust historical, universe-based data through September 2008. A second set of factors was generated using the record of sample-based estimates, and applied to reprojected sample-based estimates for the last quarter of 2008 and sample-based estimates developed month by month in 2009.

Annual Revision and Internet Access

Annual revisions of the data series in *Economic Indicators* normally incorporate:

- (1) the latest benchmark — 2009 for the Resident Labor Force Indicators (Series 1-6) and 2009 for Establishment Employment Indicators (Series 7-16).
- (2) new seasonal adjustment factors, which usually affect at least five years of seasonally adjusted data, or the period from January 2005 forward.

Internet Access: Available on the Labor Planning & Analysis (LPA) Web site, <http://lwd.dol.state.nj.us/labor/lpa>, are:

- (1) the current month’s *Economic Indicators* issue.
- (2) historical series when available, January 1976 to December 2009. This includes the latest annual revisions to unadjusted nonfarm data (January 2007 to December 2009) and seasonal adjustment revisions (January 1990 to December 2009). Because revisions can affect various multi-year periods of original and seasonally adjusted data, it would be incorrect to generate a historic time series for *Economic Indicators* data by tying together series from old issues. For example, seasonally adjusted data from January 2006 to December 2010 are subject to change during the next annual revision cycle.

General Notes

Annual Averages. On p. S-20 are the annual averages of the of the data series for recent years to be used as a benchmark for evaluating current monthly data.

Charts. Unless otherwise noted, all graphs were developed with seasonally adjusted data.

Moving Averages. Series where the monthly data vary erratically have been plotted with moving averages (thick line) and nonaveraged data (thin line) superimposed.

Scales. The scale of each series is determined by the volume and trend of the data series. Caution should be exercised in making comparisons among charts of different scales.

Shaded Columns. Shaded areas indicate periods of general national contraction as identified by the National Bureau of Economic Research (NBER). The July 1990-March 1991, March 2001-November 2001, and December 2007- present national recessions are shown in the graphs for Series 1-27.

Tables. Revised data are indicated by an “R” after the entry.

Data Sources for Economic Time Series 1-27

No.	Title	Data Source
1	Civilian Labor Force	NJ Department of Labor and Workforce Development, Division of Labor Market and Demographic Research
2	Resident Employment	
3	Unemployment	
4	Labor Force Participation Rate	
5	Employment/Population Ratio	
6	Unemployment Rate	
7	Nonfarm Payroll Employment	
8	Private Sector Nonfarm Payroll Employment	
9	Construction Payroll Employment	
10	Manufacturing Payroll Employment	
11	Trade, Transportation and Utilities Payroll Employment	
12	Information Payroll Employment	
13	Financial Activities Payroll Employment	
14	Professional and Business Services Payroll Employment	
15	Education and Health Services Payroll Employment	
16	Leisure and Hospitality Payroll Employment	
17	CPI for All Urban Consumers (CPI-U)	US Bureau of Labor Statistics
18	Consumer Confidence Index for the United States	The Conference Board
19	Total Private Dwelling Units Auth. by Bldg. Permits	US Bureau of the Census, Manufacturing and Construction Division
20	Priv. Single-Fam. Dwelling Units Auth. by Bldg. Permits	
21	Priv. Multi-Fam. Dwelling Units Auth. by Bldg. Permits	
22	Total New Vehicle Registrations	R.L. Polk and Company
23	New Passenger Car Registrations	
24	New Light Truck/Van Registrations	
25	Weeks Claimed and Insured Unemployment Rate	NJ Department of Labor and Workforce Development, Division of Program Planning, Analysis and Evaluation
26	Initial Claims - Weekly Averages	
27	Unemployment Insurance Exhaustions	

Data Sources for Economic Time Series 1-27

1-6 **Resident Labor Force Indicators** are produced using a modeling procedure based on regression techniques, that allows for the construction of error ranges. This procedure includes data variables from the NJ Department of Labor & Workforce Development's monthly Current Employment Statistics (CES) survey, unemployment insurance claims data and responses from the US Bureau of Labor Statistics' Current Population Survey (CPS) of 1,200 households in NJ. Data are available monthly back to 1976.

Since the third generation of LAUS models were introduced in January 2005, there has been a growing concern among data users regarding monthly volatility of official statewide seasonally-adjusted employment and unemployment series. As a result, the BLS has implemented a smoothed-seasonally-adjusted (SSA) methodology to labor force estimates from January 1976 forward. These revised estimates will be available beginning with the publication of 2009 annual revised estimates. The SSA methodology will be reflected in statewide labor force estimates from January 2010 forward.

For additional information regarding this change in methodology, please refer to the "SSA Questions and Answers" on the BLS website at: <http://www.bls.gov/lau/lassaqa.htm>

Beginning with 1990, data incorporate 2000 census-based population controls as well as improved estimates of immigration, emigration, births and deaths for the state and are not directly comparable to earlier figures.

Statistical Section Notes (cont.)

The **Labor Force Participation Rate** and the **Employment/Population Ratio** (Series 4 and 5) are expressed as percentages of the civilian noninstitutional population aged 16 years and over.

- 7-16 The **Establishment Employment Indicators** are generated from the monthly CES survey of employers on the number of persons who worked or received pay for any part of the pay period including the 12th of the month.

Data reflect March 2009 benchmarks.

Seasonally adjusted data for Series 7-16 have been revised back to January 1990.

Not seasonally adjusted data have been revised back to 2007.

Private Sector Nonfarm Payroll Employment (Series 8) is computed by subtracting government employment from total nonfarm employment.

Standard errors have been computed to estimate the variance of total private sector employment and for all supersector series statewide, as well as for total private sector employment for Metropolitan Statistical Areas. More detailed information is available at lwd.dol.state.nj.us/labor/lpa under "Employment & Wages". Please see the technical note on sample variance.

- 17 The **Consumer Price Index for All Urban Consumers (CPI-U)** is a measure of the average change over time in the prices paid by all urban consumers (excluding military personnel and persons in institutions) for a fixed market basket of consumer goods and services. The month-to-month change in the CPI is a measure of inflation. Beginning with January 2007, monthly data is reported out to three decimal points.

The **CPI-U** represents approximately 87% of the total population. The **US CPI-U** is the US City Average. The **US CPI-U** and **Metro Area CPI-U** (see definitions below) are not seasonally adjusted.

The CPI does not measure the relative cost of living between areas. There is no "New Jersey CPI". The division of New Jersey's 21 counties between two metropolitan areas for which CPIs are calculated is defined below.

Internet: US Bureau of Labor Statistics Web site may be accessed at <http://www.bls.gov/data/top20.htm> for all regional and national CPI data.

Metro Area definitions:

"NY" designates the *New York-Northern New Jersey - Long Island, NY-NJ-CT-PA area*. In New Jersey this includes Bergen, Essex, Hudson, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Somerset, Sussex, Union and Warren counties. In New York, it includes New York City (5 counties), Dutchess, Nassau, Orange, Putnam, Rockland, Suffolk and Westchester counties. In Connecticut, it includes Fairfield and New Haven counties, plus parts of Litchfield and Middlesex counties. In Pennsylvania, it includes Pike County. Data are published monthly.

"PA" designates the *Philadelphia-Wilmington-Atlantic City, PA-NJ-DE-MD area*. In New Jersey this includes Atlantic, Burlington, Camden, Cape may, Cumberland, Gloucester, and Salem Counties. In Pennsylvania, it includes Bucks, Chester, Delaware, Montgomery and Philadelphia counties. In Delaware, it includes New Castle County, and in Maryland, Cecil County. Data are published bi-monthly.

- 18 **Consumer Confidence Index (CCI), (US 1985=100)** is based on a representative, random sample of 5,000 US households surveyed monthly by TNS for the Conference Board. The index represents consumers' perceptions of the present general economy, their own financial conditions as well as their short-term (six months) outlook. Economists use the CCI as a leading indicator for consumer spending.

Statistical Section Notes (cont.)

19-21 The **Residential Building Permits Indicators** are compiled by the US Bureau of the Census, Manufacturing and Construction Division as of the thirteenth workday of the following month. Data are collected for all permit-issuing places in the state through a monthly survey of local construction officials. If data are not received for a particular place for that month, the data are imputed. The Census Bureau conducts an annual follow-up to obtain as much data as possible for places for which the data were imputed during the year; these data are then considered to be **FINAL MONTHLY FIGURES**. (Final statewide totals used to produce the annual averages on p. S-20 also include “undistributed” units.) Data beginning January 1998 contain revisions allocated back to prior months and are directly comparable to over-the-year changes shown on the **New Jersey’s Economy by the Numbers** table.

Total Private Dwelling Units Authorized by Building Permits (Series 19) data are the sum of single-family, two-family, three-or-four-family, and five-or-more-family dwelling units. Public housing units are not included in the series and represent a tiny fraction of the total.

Private Multi-Family (5+ units) Authorized by Building Permits (Series 21) include all multi-family structures with five or more units, except those in public housing. Data do not exhibit a stable seasonal pattern and are, therefore, not appropriate for seasonal adjustment.

22-24 These series on **New Passenger Car & New Light Truck/Van Registrations** present data only on total new passenger cars and total light truck/vans (in the gross vehicle weight class 0-10,000 lbs.) registered in New Jersey, regardless of the state in which the sales occur. Included are both domestically produced and imported vehicles. Excluded are all federal government registrations. Monthly data for current and prior-year are subject to revision.

Because of unemployment insurance (UI) coverage and other law changes affecting eligibility for benefits, data on unemployment insurance claims (Series 25-27) may not be directly comparable between years.

25 **Weeks Claimed (Weekly Average)** is computed by dividing the total number of weeks claimed (intra-state and interstate agent under the Regular State UI Program only) in the month by the number of weeks in the month.

The **Insured Unemployment Rate (IUR)** is the seasonally adjusted weekly average of weeks claimed (intrastate and interstate agent claims under the Regular State UI Program only), which is a proxy for a count of claimants, as a percent of employment covered by unemployment insurance.

26 The **Initial Claims Weekly Average** represents intrastate and interstate agent claims under the Regular State UI program only.

27 **Unemployment Insurance Exhaustions** are for the Regular State UI Program only.
