

- Put your child in a safety seat every time you travel, even on short trips.
- Safety experts recommend that all children under 13 ride in the back seat.
- Never hold a child on your lap while riding in either the front or back seat.
- Always follow the manufacturer's instructions for correct safety seat installation.
- The center rear seat is the safest place in the car.
- Use the car's seat belt or the LATCH system (detailed in vehicle owner's manual) to anchor the child safety seat to the car.
- Make sure the safety seat's harness fits snugly.
- Tether straps greatly reduce head injury. If your seat is equipped with a tether, refer to your vehicle owner's manual for the location of the anchor hook-up for the tether strap.
- Set a good example by wearing your seat belt every time you travel. All drivers and passengers must wear a seat belt in New Jersey. It's the law.

- A lap and shoulder belt system restrains the upper body and head from forward movement better than a lap belt only.
- Studies show that when children are buckled up correctly, they are less likely to be injured during a crash.
- Never use a child safety seat that has been in a crash. Obtain a new child safety seat.
- Use only federally approved child safety seats that follow the manufacturer's recommendation regarding the useful life of the restraint.

Click on the "Car Seats and Booster Seats" box to access a wealth of information presented by the National Highway Traffic Safety Administration (NHTSA). Car seats and boosters provide protection for infants and children in a crash, yet car crashes are a leading cause of death for children ages 1 to 13. That's why it's so important to choose and use the right car seat correctly every time your child is in the car. Follow the important steps on this web page to choose the right seat, install it correctly and keep your child safe.

STAYING SAFE IN THE CAR

Car Seat Recommendations for Children

SAFE PASSAGE

moving toward zero fatalities

WWW.NJSAFEROADS.COM

Motor vehicle crashes are the number one cause of death for children over the age of six months in the United States. The proper use of child safety seats is one of the simplest and most effective methods available for protecting the lives of our young children in the event of a motor vehicle crash. It is also effective in preventing injury and reducing the need for hospitalization.

Please make sure that children are properly protected while traveling in a motor vehicle. Only the correct use of child safety seats will offer optimal protection.

The **“right”** seat for your child is largely a matter of personal choice. Choose a seat that fits your child and your car, read the instructions carefully, and use the seat correctly every trip. There are many different models of child safety seats on the market today. Each one must meet federal safety standards and all provide good protection for your child when used correctly. Both state and national studies show that many child safety seats are used or installed improperly. It's important for all parents and persons who transport children to read the child safety seat manufacturer's instructions, as well as the vehicle owner's manual for proper use and installation. This brochure is designed to help you learn about child passenger safety and how to get additional information if needed.

PURCHASE AND INSTALL
*** 3 WEEKS ***
BEFORE YOUR DUE DATE

Remember, adults should wear seat belts, too. Set an example for the children in your car. When you're an expectant mother, it's important to always wear your seat belt to protect you and your unborn child. Wear the lap belt across your hips and below your belly with the shoulder belt across your chest (between your breasts). Plan on having your child safety seat (infant seat) installed in your vehicle at least three weeks before your baby's due date. Adhere to the following recommendations to ensure your child is restrained safely and properly.

■ Recommendations for New Jersey Law Compliance:

The following recommendations will provide the safest way to transport your child according to the American Academy of Pediatrics and the National Highway Traffic Safety Administration (NHTSA). Additionally it will ensure compliance to the New Jersey Child Passenger Restraint Law. (Title 39:3-76.2a)

- Any child under the age of 8 years old and a height of 57 inches shall be secured as follows in the rear seat of a motor vehicle:
 - A. A child under the age of 2 years and 30 pounds shall be secured in a rear-facing seat equipped with a 5-point harness.
 - B. A child under the age of 4 years and 40 pounds shall be secured as described in (A) until they reach the upper limits of the rear-facing seat, then in a forward-facing child restraint equipped with a 5-point harness.
 - C. A child under the age of 8 and a height of 57 inches shall be secured as described in (A) or (B) until they reach the upper limits of the rear-facing or forward-facing seat, then in a belt positioning booster seat.
 - D. A child over 8 years of age or 57 inches in height must be properly secured by a seat belt.
- If there are no rear seats, the child shall be secured as described above in the front seat except that no child shall be secured in a rear-facing seat in the front seat of any vehicle that is equipped with an active passenger-side airbag. The aforementioned is acceptable if the airbag is de-activated.
- Motorists in violation of the law (Title 39:3-76.2a) can be stopped by police and issued a summons.

Choosing the Correct Seat for Your Child

- Always refer to your specific car seat manufacturer's instructions; read the vehicle owner's manual on how to install the car seat using the seat belt or LATCH system; and check height and weight limits.

AGE

Birth – 12 months  Your child under age 1 should always ride in a rear-facing car seat. There are different types of rear-facing car seats: Infant-only seats can only be used rear-facing. Convertible and 3-in-1 car seats typically have higher height and weight limits for the rear-facing position, allowing you to keep your child rear-facing for a longer period of time.

1 – 3 years   Keep your child rear-facing as long as possible. It's the best way to keep him or her safe. Your child should remain in a rear-facing car seat until he or she reaches the top height or weight limit allowed by your car seat's manufacturer. Once your child outgrows the rear-facing car seat, your child is ready to travel in a forward-facing car seat with a harness.

4 – 7 years   Keep your child in a forward-facing car seat with a harness until he or she reaches the top height or weight limit allowed by your car seat's manufacturer. Once your child outgrows the forward-facing car seat with a harness, it's time to travel in a booster seat, but still in the back seat.

8 – 12 years   Keep your child in a booster seat until he or she is big enough to fit in a seat belt properly. For a seat belt to fit properly the lap belt must lie snugly across the upper thighs, not the stomach. The shoulder belt should lie snug across the shoulder and chest and not cross the neck or face. Remember: your child should still ride in the back seat because it's safer there.
