

NEW JERSEY STATE AUDITORIUM
HVAC UPGRADES – NEW DIGITAL CONTROL SYSTEM FOR HVAC

The New Jersey State Museum Auditorium was built around 1964; the Auditorium still has much of the original HVAC systems in place and has only received minor ductwork modifications during its operational history. The HVAC systems within the Auditorium facility were originally equipped with a pneumatic automatic temperature control system and are in various states of failure and disrepair. The objective of this project at the NJ State Auditorium will include the replacement of the existing automatic temperature control system with a new digital control system and HVAC improvements.
