

FATAL MOTOR VEHICLE ACCIDENT COMPARATIVE DATA REPORT 1973

State of New Jersey

DEPARTMENT OF LAW AND PUBLIC SAFETY DIVISION OF STATE POLICE

MAJOR E. OLAFF
ACTING SUPERINTENDENT

POST OFFICE BOX 68
WEST TRENTON, NEW JERSEY 08625
(609) 882 - 2000

Dear Reader:

Deeply concerned over the tragic loss of lives caused by traffic accidents each year, the Fatal Accident Unit of the Division of State Police has compiled a report comparing fatal accident facts for 1973.

This Unit has the responsibility of re-investigating all fatal accidents in the state which were not initially investigated by State Police personnel, and to review those which State Police Personnel did investigate. Included in this responsibility is the maintenance of records on fatals, analysis of cause, contributing circumstances and location of all accidents for the purpose of determining patterns to which selective enforcement could be applied as a preventive measure.

On the following pages you will find statistics of the fatal traffic accident records compiled over the past several years. The total picture of the suffering they represent is beyond comprehension.

In 1973, we witnessed an all-time high of 1355 fatalities, compared to the previous high of 1352 in 1968. Of special concern in this discouraging reversal of a previous downward trend since 1968, is the startling increase in bicycle fatalities, the ever present drinking driver problem and pedestrian deaths. It is imperative that our efforts continue to be directed toward these ends.

This report constitutes a detailed look at the causes and results of fatal accidents in New Jersey and it is hoped that it will aid all law enforcement agencies in their never ending struggle for safety on our highways.

With the continued cooperation of New Jersey's Municipal, County, State and other law enforcement agencies, and most important our motoring public, we hope to make New Jersey a safer place to drive.

Sincerely,

A handwritten signature in cursive script that reads "E. Olaff".

Major E. Olaff
Acting Superintendent

M. ALCOHOL FACTOR

There were 1355 Fatalities during 1973. Of this total, 807 were tested for alcohol and 548 were not tested. The various reasons for those not tested were: delayed deaths; age factors; contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause tests to be performed on victims. Of the Fatalities, 654 were drivers; 348 passengers; 319 pedestrians and 34 bicyclists. Of the 807 tested, 430 were positive for alcohol in varying degrees and 377 were negative. This would indicate 53.3% of the Fatalities tested were positive for alcohol and 46.7% were negative.

The attached chart is a breakdown of victims and the percentage of alcohol in each classification. An analysis of the chart by victim classification indicates the following:

1. Drivers:

There was a total of 654 drivers killed, of which 495 were tested. Of those tested, 280 were positive and 215 were negative, for a 56.6% alcohol factor. The .15% and over period alcohol level, has the largest number listed. Of the 280 imbibing drivers, 193 or 68.9% had an alcohol level of .10% or higher.

2. Passengers:

There was a total of 348 passengers killed, of which 147 were tested. Of those tested, 76 were positive and 71 were negative, for a 51.7% positive alcohol factor.

3. Pedestrians:

There was a total of 319 pedestrians killed, of which 157 were tested. Of those tested, 74 were positive and 83 negative, for a 47.1% alcohol factor.

4. Bicyclists:

There was a total of 34 bicyclists killed. Eight (8) bicyclists were tested for alcohol content and were found to be negative.

Legend:
Had Been Drinking: Includes those delayed deaths where an odor of alcohol was detected. Includes admittance of victim (in delayed death) or statements of witnesses. Includes lab reports which show a trace and not a percentage, or reading below 0.01%.
Negative: Tested and found to be negative.
No Test: Because of delayed deaths; age factors, contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause tests to be performed on victims.

MOTORCYCLE INVOLVEMENT

During the past several years there has been a tremendous increase in motorcycle registrations in the United States, with accidents and their accompanying injuries and deaths keeping pace. From registrations of less than 600,000 in 1960 the total of registered motorcycles has grown to over 4 million, and statistics indicate that approximately 80% of reported motorcycle accidents result in injury or death. A comparable figure for automobiles is 10%.

There were 69,106 motorcycles registered in New Jersey during 1973, compared with 63,831 in 1972, for an 8% increase. It can be anticipated that the fuel shortage will further escalate motorcycle usage and the ensuing loss of lives.

Following are statistics relating to Fatal Motorcycle Accidents that occurred in New Jersey during 1973.

Of the 34 bicycle fatalities, 10 were tested for alcohol content and were found to be negative. The remaining 24 were not tested due to age factors, delayed deaths, etc.

“THE AGE OF MAJORITY”
COMPARATIVE REPORT FOR 1972 – 1973

***The Age of Majority as it Relates to the Drinking Driver in New Jersey**

In May 1972, Senate Bill S-992 was introduced and subsequently enacted by the New Jersey Legislature. This Act became effective January 1, 1973, giving persons 18 years of age and older the rights and obligations formerly restricted to persons 21 years of age and older. One of the most significant changes as a result of this act, was the right to sell, purchase and consume alcoholic beverages. During 1973, this change added approximately 347,541 potential drinking drivers to our roadways.

The below listed statistics reflect the “Age of Majority” Fatal Accident Occurrences, including alcohol involvement, for years 1972 - 1973.
