# Bias Incident Report 2020

*Data Supplied by the New Jersey State Police*

## Letter from Acting Attorney General Matthew J. Platkin

Dear Governor and Members of the Legislature:

2020 was a year that focused our country's attention on racial justice. From the murder of George Floyd to the harassment of the Asian American and Pacific Islander (AAPI) community in connection with COVID-19, many Americans recognized that the need to overcome racism is more pressing than they had thought.

There were more bias incidents that were reported in New Jersey in 2020 than in any year since we began tracking them. The 994 bias incidents reported in 2019 marked a record high. The 1447 bias incidents reported in 2020 exceeded that record by over 45 percent. Meanwhile, more hate crimes were reported nationally than in any year for more than a decade.

The attached report on reported bias incidents in New Jersey in 2020 supplements the data produced by the State Police with analysis from the Division on Civil Rights of the trends over time and possible reasons for those trends. This report would not be possible without their work and the work of law enforcement agencies across the State.

The dramatic increase in reported bias incidents in recent years is likely due in part to several statewide improvements in reporting. At the same time, we do not think that better reporting fully explains the trendline, which tracks national trends. Disproportionate increases in reported bias incidents targeting Black and AAPI residents likely reflect actual increases in bias incidents targeting those communities. And the Division on Civil Rights links 2020's increase in bias incidents to the COVID-19 pandemic, the Black Lives Matter movement and related backlash, and racialized rhetoric around the 2020 election.

The State's responses to the upward trend in reported bias incidents reflect our commitment to addressing the underlying causes. For example, in 2020, we announced the creation of an incident response team who can respond in the community following a major civil rights incident, released the report of the Youth Bias Task Force with recommendations to combat bias and hate among young people, and made it easier for residents to file bias incident complaints online.

Everyone in our State has the right to be treated with integrity and decency, no matter their background. For that to be our reality, it is essential that we continue to confront the implicit and systemic biases that fuel bias-motivated crimes.

There is more work to be done, but 2020 reinforced our commitment to pursuing that work with urgency. I hope that this report will have a similar effect.

Respectfully,

A handwritten signature in blue ink, appearing to read "M. J. Platkin". The signature is fluid and cursive, with a long horizontal flourish at the end.

Matthew J. Platkin  
*Acting Attorney General*

## Letter from Colonel Patrick J. Callahan

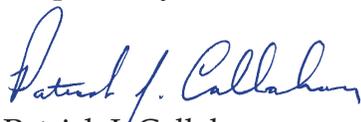

Dear Acting Attorney General Platkin:

Pursuant to the Attorney General's Executive Directive 1987-3, the thirty-third annual report on bias incidents in New Jersey is submitted. This report contains statistics related to bias incidents.

All information is based on bias incident reports submitted to the New Jersey Uniform Crime Reporting System by every New Jersey law enforcement agency for the year 2020. The report contains comparisons and analyses between 2019 and 2020 data.

This report could not have been realized without the cooperation of all New Jersey law enforcement agencies. It is being forwarded for your information and presentation to the Governor and members of the Legislature.

Respectfully,

  
Patrick J. Callahan  
Colonel

## Letter from Interim Chief of Strategic Initiatives and Enforcement Aarin Michele Williams

Dear Acting Attorney General Platkin:

The year 2020 has weighed heavily on our State and will do so for generations. The COVID-19 pandemic wreaked havoc, stealing loved ones' lives and health; shutting down our communities; and exposing systemic and structural inequities in health care, policing, education, housing, technology, and more. The communities most disproportionately impacted by the pandemic simultaneously faced the dual pandemic of racism, highlighted by the deaths of Ahmaud Arbery, Breonna Taylor, and George Floyd, to name a few. People around the world responded by protesting to fight for humanity, power, and lives in the name of Black Lives Matter. Among this devastation, New Jerseyans endured an increase in bias incidents while most people were largely indoors, requiring us to stop and ask ourselves: how, why, and how do we end this?

This report identifies three major potential reasons for the rise in reported bias incidents in 2020: the COVID-19 pandemic, racist backlash against protests, and the 2020 Presidential election.

Past years' reports have demonstrated a rise of hate. This year's report does the same. From 2019 to 2020, the number of reported bias incidents in New Jersey jumped from 994 to 1447. Black people were once again the most frequent targets of racially-motivated reported bias incidents, accounting for 39% of all reported motivations in 2020, a frightening 85% increase. Anti-Asian racism was a reported motivation for reported bias incidents 69 times – a 77% increase. Reported bias incidents in our State have quadrupled, making 2020 the worst year of bias incidents since these numbers have been recorded.

This report serves as a resource in work to eradicate and prevent racism, hate, bias, and discrimination. The events of 2020 could not go unexplored or unexplained. These numbers represent people, families, and our communities. Our family, friends, coworkers, and neighbors are being terrorized, dehumanized, and excluded by people who feel empowered to inflict this harm and violence.

Nevertheless, the Division on Civil Rights continues to envision and work towards a state free from hate. We hope that this report inspires New Jerseyans to work to create a state where all people are treated with equal dignity and respect and have access to equal opportunity, especially those historically denied these rights.

Respectfully,

A handwritten signature in blue ink that reads "Aarin M. Williams". The signature is fluid and cursive.

Aarin Michele Williams  
*Interim Chief of Strategic Initiatives and Enforcement*

## I. Introduction

The year 2020 had the highest annual number of reported bias incidents in New Jersey since the State began reporting bias incidents in 1994. One might have expected the number of reported bias incidents to drop with the statewide COVID-19 response keeping many indoors, quarantining and socially distancing. Instead, the opposite was true: 2020 saw a total of 1447 reported bias incidents across the State, eclipsing 2019's prior record of 994. This number represents an alarming 45% increase over the total reported bias incidents in 2019, which comes after a 75% increase in the number of reported bias incidents from 2018 to 2019. This is the fifth consecutive year that the number of reported bias incidents has risen. The number of reported bias incidents in the State climbed by an astounding 294% in five years – almost quadrupling from 2015's 367 to 2020's 1447 – representing the sustained rising tide of hate in New Jersey.<sup>1</sup>

Some of the rise in reported bias incidents is almost certainly due to improved reporting, so that the bias incidents reported in New Jersey better reflect the bias incidents committed in New Jersey, even though bias incidents remain under-reported. We also noted a significant increase in reports of bias-motivated harassment in 2020 – from 421 incidents in 2019 (42% of all reported bias incidents) to 731 in 2020 (51%). As with other categories of reported bias incidents, this increase likely reflects some combination of more bias incidents and higher rates of reporting.

---

1. New Jersey State Police (NJSP) released its preliminary bias incident report for 2020 incidents on March 22, 2021. The number of reported bias incidents increased after the preliminary report due to victims and/or police reporting 2020 bias incidents after that date. All 2020 data reflected in this report is final as of April 19, 2021. To the extent that bias incidents occurred in 2020 but were reported to law enforcement after April 19, 2021, those incidents are not reflected in the data analyzed in this report.

But the stark rise in reported bias incidents cannot be explained without reference to the social factors that shaped 2020 for all of us — a global pandemic and public health crisis, a global racial justice movement against racialized policing and in support of the Black Lives Matter movement,<sup>2</sup> and the political turmoil in the lead up to and aftermath of the 2020 Presidential election.

The pandemic disproportionately devastated New Jersey's communities of color and other vulnerable communities, exposing and exacerbating health gaps based on race and ethnicity. The murders of Ahmaud Arbery and George Floyd and the killing of Breonna Taylor exposed beyond any doubt the violence that systemic racism inflicts against Black people. And the federal election intensified hate and bias. One need look no further than the reported incidents themselves to see the impact of these three factors. Racial bias was a reported motivation for 61% of all reported bias incidents in 2020, up from 49% in 2019.

Notable among reported race-motivated incidents is the rise in anti-Black and anti-Asian bias. The 686 times anti-Black racism was a reported motivation for a reported bias incident in 2020 represent an alarming 85% increase in the number of times anti-Black racism was a reported motivation for a reported bias incident in 2019 (371 times). To take one example, during a Black Lives Matter movement protest over the summer, two white men reportedly reenacted George Floyd's death in front of a crowd of protesters.

---

2. "Black Lives Matter" was founded by Alicia Garza, Patrisse Cullors, and Opal Tometi "as both a hashtag and a political project after the acquittal of George Zimmerman in the 2012 killing of Trayvon Martin." Ryan W. Miller, "Black Lives Matter: A Primer on What it Is and What it Stands For," USA Today (July 11, 2016), <https://www.usatoday.com/story/news/nation/2016/07/11/black-lives-matter-what-what-stands/86963292/>. It has since morphed into both a movement and an organization, with a "decentralized approach" and "reliance almost solely on local, rather than national, leadership." *Id.* The Black Lives Matter Global Network Foundation, Inc., is "a global organization in the US, UK, and Canada, whose mission is to eradicate white supremacy and build local power to intervene in violence inflicted on Black communities by the state and vigilantes." The Black Lives Matter movement is the organizing of protests that are "often spontaneous and not directed by one person or group of people" and may collaborate with other groups under the goal of addressing "issues that intersect with systemic racism." Miller, *supra*.

Anti-Asian racism was a reported motivation for a reported bias incident 69 times in 2020, up from 39 times in 2019. This represents a disturbing 77% increase in the number of times anti-Asian racism was a reported motivation for a reported bias incident. Many of these reported incidents revolved around COVID-19, fueled at least in part by the narrative that China was “responsible” for the pandemic. Our nation’s top political figure’s use of the term “Chinese virus” racialized the coronavirus, causing misinformation and conspiracy theories to spread. For example, an offender reportedly harassed an Asian family in their New Jersey neighborhood, calling them “Chinese” and “coronavirus” while flipping the middle finger.

These sobering examples and statistics of reported incidents, however, do not reflect the full reality of hate in New Jersey. Many more bias incidents go unreported, whether due to lack of trust in law enforcement, lack of access to help, fear of reprisal, or other systemic and cultural reasons.<sup>3</sup>

New Jersey must take honest, equitable, and bold steps toward dismantling hate and bias. This report will hopefully be one small step in that direction. By accurately analyzing bias incident statistics of 2020, a year that uniquely exposed white supremacy in our culture and institutions, we can begin to understand how we might stem the tide of hate in New Jersey.

---

3. See New Jersey Interagency Task Force to Combat Youth Bias, An Anti-Bias Vision for the Next Generation: *Report & Recommendations of the New Jersey Interagency Task Force to Combat Youth Bias*, note 6, Part II.B.2, 3 (2020), <https://www.nj.gov/oag/dcr/downloads/2020-ybtf-report.pdf> [hereinafter, “Youth Bias Task Force Report”].

## II. Defining Reported Bias Incidents

A “bias incident” is any suspected or confirmed act of bias intimidation.<sup>4</sup> Bias intimidation occurs when an enumerated offense, such as harassment, assault, terroristic threats, criminal mischief, arson, or homicide, is committed with the purpose to intimidate or with knowledge that the offense would intimidate an individual or group of individuals “because of race, color, religion, gender, disability, sexual orientation, gender identity or expression, national origin, or ethnicity.”<sup>5</sup>

The Attorney General’s Bias Incident Reporting Standards recognize that law enforcement must adopt a flexible approach when determining whether a reported incident constitutes a suspected or confirmed bias incident. The standards acknowledge that “[s]ome suspected bias incidents may not clearly fit the described definition,” and direct law enforcement to use “a common sense approach” to ensure that “[i]f an incident appears to be bias-based, it [is] investigated and reported as such.”<sup>6</sup> Thus, under the standards, “[v]erification of motive and intent” is to be made “during the ensuing investigation,” not before reporting the incident.<sup>7</sup> The standards direct law enforcement to take a broad view of what conduct to report, because even when “a single bias incident may initially appear as less serious in the larger context of all crime ... any suspected or confirmed bias incident is serious by its very nature.”<sup>8</sup> As the standards explain, “[w]hat may appear to be a minor incident can easily escalate into a larger problem or public safety concern.”<sup>9</sup>

6. Bias Incident Investigations Standards, *supra* note 4, at 3.

7. *Id.*

8. *Id.*

9. *Id.*

Some portion of the dramatic increase in reported bias incidents in 2020 is likely attributable to the continued impact of a series of major initiatives that were launched in 2019 to ensure that law enforcement agencies at the local, county, and state level were effectively reporting bias incidents.<sup>10</sup> Adding to these improvements, in 2020, the State launched an online reporting tool called NJBIAS available at <https://bias.njcivilrights.gov>, which makes it more accessible for residents to report bias crimes, discrimination, and harassment. In this sense, the number of reported bias incidents may more accurately reflect – while still undercounting – the actual number of bias incidents.

Consistent with the Bias Incident Reporting Standards and past annual reports, the 1447 bias incidents analyzed herein reflect all reported bias incidents, regardless of whether the underlying conduct was found to rise to the level of a chargeable offense.

---

10. N.J. Office of the Attorney General, *2019 Bias Incident Report* 5-6 (2020), <https://nj.gov/oag/dcr/downloads/2019-bias-incident-report.pdf> [hereinafter “2019 Bias Incident Report”] (discussing the new Electronic Uniform Crime Reporting (eUCR) portal, revised Bias Incident Reporting Standards that required more prompt reporting, and training by the Division of Criminal Justice (DCJ)).

## III. Detailed Analysis of Reported Bias Incidents in New Jersey

The data released and analyzed in this report is based on 2020 bias incident reports submitted to the New Jersey Uniform Crime Reporting System by every New Jersey law enforcement agency pursuant to New Jersey's Bias Incident Reporting Standards.<sup>11</sup> For comparison purposes, portions of this report also analyze data submitted to the New Jersey Uniform Crime Reporting System by every New Jersey law enforcement agency from 2006 through 2020.

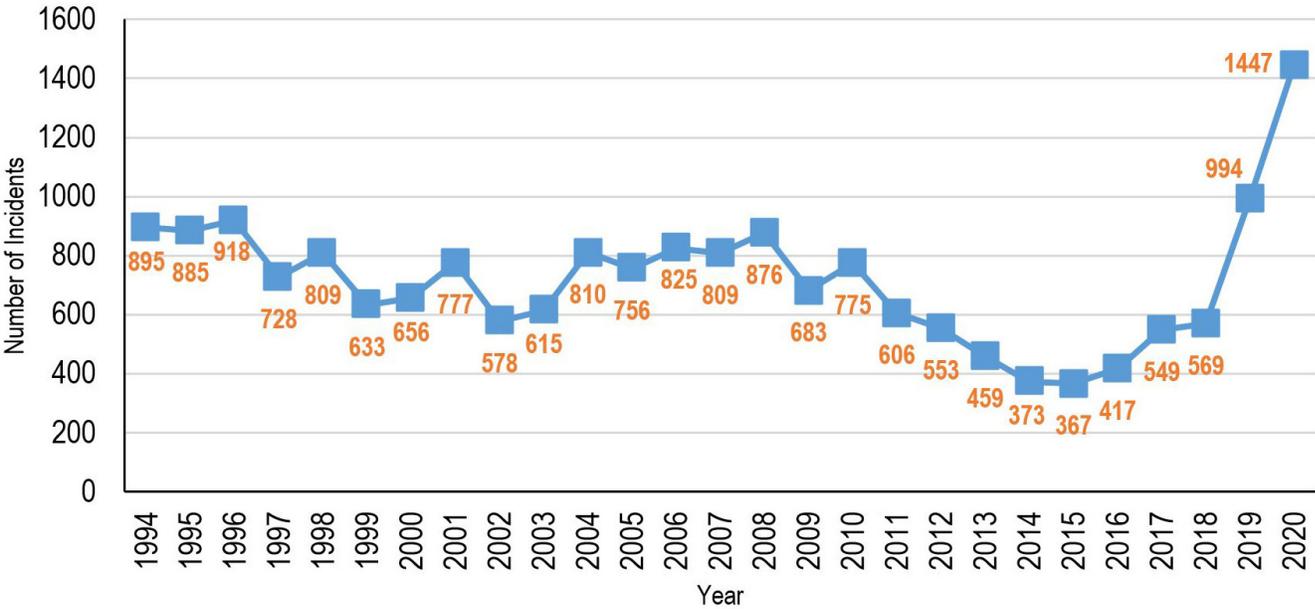

As discussed above, there was a significant rise in reported bias incidents in 2020. The number of bias incidents reported in 2020 – 1447 – was record breaking, representing the highest annual number of reported bias incidents since New Jersey began reporting bias incidents in 1994 and the second largest year-on-year increase. Even more troubling, the rise in 2020 reflects an ongoing trend: a 294% climb in bias incidents in five years – from 367 incidents in 2015 to 1447 incidents in 2020.

---

11. See generally Bias Incident Investigations Standards, *supra* note 4. All 2020 data reflected in this report is final as of April 19, 2021. To the extent that bias incidents occurred in 2020, but were reported to law enforcement after April 19, 2021, those incidents are not reflected in the data analyzed in this report.

This year's increase likely indicates that bias incidents have risen, bias incidents were reported at higher rates, and that the streamlining of incident reporting using the online portal has supported law enforcement in accurately and consistently reporting incidents.

### Total Number of Reported Bias Incidents in N.J. 1994-2020

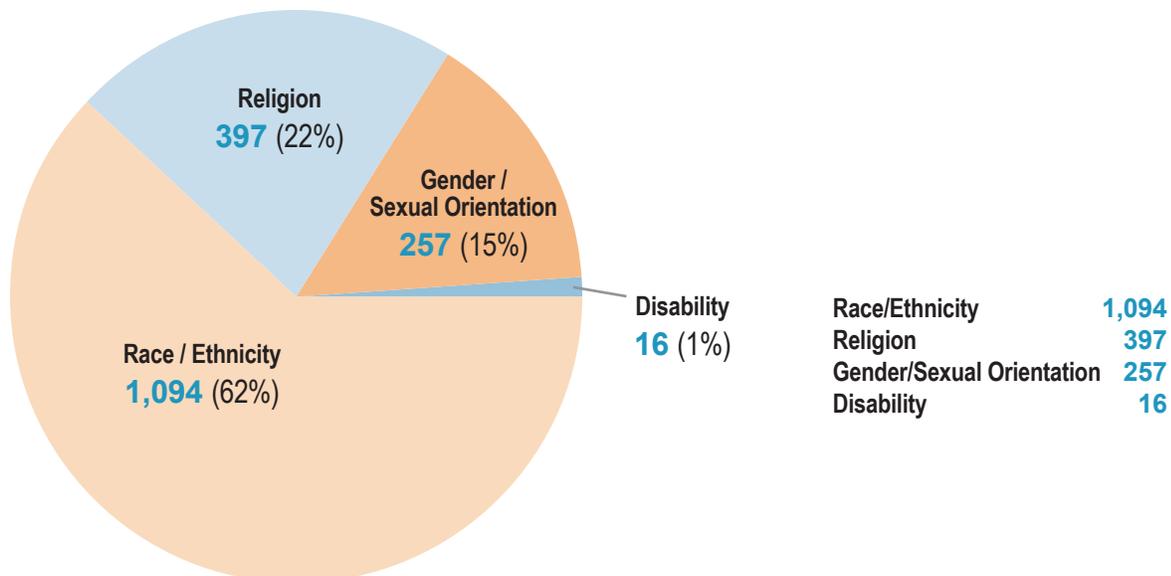

## A. Bias Incidents by Type of Bias

Because a single bias incident can be motivated by two or more different types of bias (i.e., a person can be targeted because of their race *and* gender, or graffiti in a park can dehumanize people based on race *and* religion), the number of reported motivations exceeds the total number of reported bias incidents. The 1764 reported motivations for the 1447 reported bias incidents in New Jersey for 2020 were broken down as follows:

- Race, ethnicity, or ancestry accounts for 62%, or 1094, of the 1764 reported motivations;
- Religion accounts for 22%, or 397, of the 1764 reported motivations;
- Gender (which includes sex, gender identity, gender expression, and transgender status) or sexual orientation accounts for 15%, or 257, of the 1764 reported motivations; and
- Physical or mental disability of the victim accounts for slightly less than 1%, or 16, of the 1764 reported motivations.

### Reported Motivations of Reported Bias Incidents in NJ, 2020

As was the case for every year from 2006-2019, in 2020 Black people were once again the most frequent targets of racially-motivated reported bias incidents. Anti-Black racism was a reported motivation for a reported bias incident 686 times, accounting for 39% of all reported motivations in 2020. This represents an alarming 85% increase in the number of times anti-Black racism was a reported motivation for a reported bias incident from 371 times in 2019. Anti-Black bias incidents included a physical altercation in a store in which a white perpetrator reportedly told a Black victim to cut in front of her in line and then pushed the victim's cart over, punched her, used a racial slur to refer to her, and said, "You animals should be put down."

Anti-Asian bias rose significantly in 2020. Anti-Asian racism was a reported motivation for reported bias incidents 69 times, compared with 39 times in 2019 – a 77% increase. This represents 5% of all reported bias incidents and accounts for 4% of all reported motivations in 2020.

Jewish people remained the religious group most frequently targeted in reported bias incidents in 2020. Specifically, anti-Jewish bias was a reported motivation for reported bias incidents 298 times in 2020, representing 21% of all reported bias incidents and 17% of all reported motivations. While this demonstrates a slight decline from 2019 (345, representing 35% of all reported bias incidents and accounting for 28% of all reported motivations), 2020 was nevertheless the second highest year for anti-Semitic incidents on record.

Anti-Hispanic or Latinx bias was the most commonly reported motivation for reported bias incidents motivated by ethnicity.<sup>12</sup> Such bias was a reported motivation for reported bias incidents 102 times in 2020, compared with 48 in 2019 – an astounding 113% increase. Anti-Hispanic or Latinx bias was associated with 7% of all reported bias incidents and represented 6% of all reported motivations in 2020.

Anti-gay bias was the most frequently reported motivation for reported sexual orientation-based bias incidents. Bias against gay males was reported as a motivation for a reported bias incident 122 times in 2020, representing 8% of all reported bias incidents and accounting for 7% of all reported motivations. This represents an increase of 67%, compared to the 73 times bias against gay males was reported as a motivation in 2019.

Anti-transgender bias was the most commonly reported motivation for reported bias incidents motivated by gender, which includes bias based on sex, gender identity, gender expression, and transgender status. Anti-transgender bias was a reported motivation for reported bias incidents 17 times, representing slightly over 1% of all reported bias incidents and 1% of all reported motivations in 2020. This represents a 70% increase in the number of times anti-transgender bias was, in whole or in part, a reported motivation for a reported bias incident from 2019's 10 times. Transgender people are drastically overrepresented as reported bias incident victims compared to their representation in our State's population. A 2016 report found that 30,050, or 0.44%, of New Jersey's population identifies as transgender, meaning that transgender people experience bias incidents at almost 2.5 times their representation of the population.<sup>13</sup>

---

12. The phrase "Latinx" is used to include all people residing in the United States who identify as of Latin American descent. The term "Hispanic" is used to include all people residing in the United States who identify as of Spanish-speaking descent. Although these two terms overlap significantly, they are not interchangeable, in that "Hispanic" does not include people who identify as from Brazil, Guyana, Suriname, or any other Latin American country in which the predominant language is not Spanish, and "Latinx" does not include people who identify as from Spain, Equatorial Guinea, or any other predominantly Spanish-speaking country outside of Latin America. Because the underlying data covers both anti-Hispanic and Latinx discrimination, this report uses both terms together.

13. Andrew R. Flores et al., *How Many Adults Identify as Transgender in the United States?*, 3 (2016), <https://williamsinstitute.law.ucla.edu/wp-content/uploads/Trans-Adults-US-Aug-2016.pdf>.

In addition to specific incidents of anti-sexual orientation and anti-gender bias, there were 51 times that anti-LGBTQ+ bias generally was coded as the motivation for a bias incident, or 4% of all reported bias incidents and 3% of all reported motivations in 2020. This is an increase of 42%, compared to the 36 times anti-LGBTQ+ bias was reported as a motivation in 2019.<sup>14</sup> Anti-LGBTQ+ bias incidents are those based on multiple biases against members of the LGBTQ+ community or where the specific type of bias is unknown due to the nature of the incident.

Anti-disability bias was a reported motivation for reported bias incidents 16 times, representing 1% of all reported bias incidents and slightly less than 1% of all reported motivations in 2020. This represents a 78% increase in the number of times anti-disability bias was a reported motivation from 9 times in 2019. Feedback received by the Division on Civil Rights suggests that the generally low numbers of anti-disability incidents may not reflect an absence of incidents, but rather barriers that people with disabilities face to reporting. For instance, especially during 2020, many people with disabilities were facing serious healthcare concerns caused by COVID-19 and were trying to ensure they had support for their most immediate, basic needs. Advocacy groups also reported that beyond the effect the pandemic may have had on reporting, the nature of certain types of disabilities means that people may not know that certain conduct they faced was discriminatory and could be reported. Furthermore, people with mental health disabilities can be especially fearful of interactions with law enforcement because of possible misunderstandings, and therefore potential unintended consequences from such contacts.

---

14. It is also possible that the increase in reported bias incidents motivated by anti-gay, -lesbian, -bisexual, -transgender, -gender nonconforming, and -LGBTQ+ biases is due to an increase in reporting as a result of the Attorney General's "LGBTQ Equality Directive." The Directive governs interactions with transgender, gender nonconforming, and non-binary people and was designed to ensure that all individuals are guaranteed safety and dignity in their encounters with law enforcement, regardless of their gender identity, gender expression, or sexual orientation. See Memo from Gurbir S. Grewal, Attorney General of New Jersey, to All Law Enforcement Chief Executives, Law Enforcement Interactions with Transgender Individuals: Attorney General Law Enforcement Directive No. 2019-3 (Nov. 20, 2019), <https://www.state.nj.us/lps/dcj/agguide/directives/ag-directive-2019-3.pdf>. The rollout of this directive included a public relations campaign to ensure that New Jersey's LGBTQ+ residents were better informed of their rights and the new requirements designed to make law enforcement agents more responsive to the needs of LGBTQ+ individuals.

## *B. Bias Incidents by Offender & Offense*

When known, the age, gender, and race of offenders are reported. In 2020:

- Of the 551 offenders whose age was known, 169 (31%) were minors and 382 (69%) were adults;
- Of the 553 offenders whose gender was known, 432 (78%) were male and 121 (22%) were female; and
- Of the 399 offenders whose race was known:
  - 328 (82%) were white, compared to 55% of New Jersey's population;<sup>15</sup>
  - 48 (12%) were Black, compared to 15.1% of New Jersey's population;
  - 14 (3.5%) were Asian, compared to 10% of New Jersey's population;
  - 2 (0.5%) were Pacific Islander, compared to 0.1% of New Jersey's population; and
  - 7 (2%) were multiple races, compared to 2.3% of New Jersey's population.

---

15. United States Census 2020, "Quickfacts: New Jersey," <https://www.census.gov/quickfacts/NJ> (last visited Oct. 20, 2021). According to the United States Census 2020 report, New Jersey had a total population of 9,288,994. *Id.*

This is similar to the 2019 breakdowns for offender demographics. Of the 386 known offenders in 2019:

- 176 (46%) were minors and 209 (54%) were adults;
- 314 (81%) were male and 67 (17%) were female; and
- 306 (79%) were white, 40 (10%) were Black, 14 (4%) were Asian, 3 (1%) were Pacific Islander, 2 (0.5%) were multiple races, and 1 (0.3%) was American Indian.

In 2019, there were 421 reported harassment offenses and 409 reported intimidation and destruction/damage/vandalism offenses, constituting 42% and 41% of total reported incidents respectively. In 2020, there were 731 reported harassment offenses and 409 reported intimidation and destruction/damage/vandalism offenses, constituting 51% and 28% of incidents respectively. The marked increase in reported harassment between 2019 and 2020 outpaced the rise in overall reported bias incidents, while the identical number of reported intimidation and destruction/damage/vandalism offenses, reflecting a smaller percentage of the overall reported bias incidents, may be due to pandemic-related constraints on in-person interactions, including quarantining and social distancing.

## *C. Bias Incidents by and Against Students and Minors*

The bias incidents reported in schools in 2020 cannot be easily compared to prior years' because, as a result of the COVID-19 pandemic, most schools – ranging from elementary and secondary schools to colleges and universities – shut down in-person learning for at least some of 2020, and students attended classes in a variety of online environments beginning in March. Due to several factors, including FBI protocols, bias incidents that occurred in a virtual school setting were not generally identifiably coded as having occurred in school. Reported bias incidents that occurred on social media, for instance, generally were coded pursuant to FBI protocols as “other/unknown,” even if they occurred during mandatory virtual classes held on a social media platform like Google Classroom, Google Meet, or Zoom.

Of the bias incidents that were reported to have occurred in a physical school setting in 2020, 96 such incidents were reported in elementary and secondary schools. DCR's review of the year's bias incident reports reflected that an additional 47 reported bias incidents occurred in online school classes, and an additional 3 reported bias incidents occurred on school-owned virtual platforms. Collectively, those incidents total at least 146 reported bias incidents associated with elementary and secondary schools in 2020, or 10% of total incidents. Although these numbers cannot be cleanly compared to past years', it is worth noting that, despite the changes that COVID-19 required in the manner in which students are educated, this number exceeds the total number of reported bias incidents in elementary and secondary schools in 2018, when there were 138 such incidents, or 24% of total reported incidents.<sup>16</sup>

---

16. N.J. Office of the Attorney General, *Bias Incident Report 2017-2018* (2019), [https://www.nj.gov/oag/dcr/downloads/2017-2018\\_Bias-Incident\\_Report\\_080719a.pdf](https://www.nj.gov/oag/dcr/downloads/2017-2018_Bias-Incident_Report_080719a.pdf).

Of the bias incidents that were reported to have occurred in a physical school setting in 2020, 32 were reported in colleges and universities. DCR's review of the year's bias incident reports reflected that an additional 9 incidents occurred during a virtual school session or activity, and an additional 2 incidents involved voicemails left for university staff. Collectively, those incidents total at least 43 reported bias incidents associated with colleges and universities in 2020, or 3% of total incidents. This compares to 39 reported at colleges and universities in 2018, which was 2.7% of total incidents.<sup>17</sup>

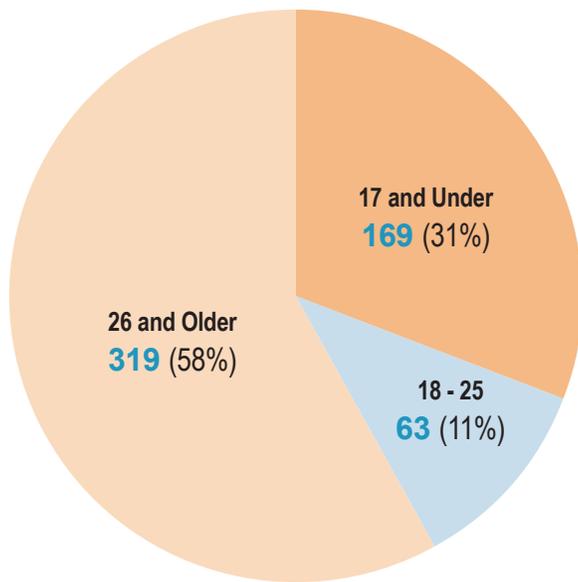

Although young people continue to make up a disproportionate share of known offenders and individual victims of reported bias incidents, there were noticeable shifts in the data in 2020, likely because a much smaller percentage of overall bias incidents occurred in school settings in 2020 than in previous years. In 2020, 232 out of the 551 offenders whose age was known (42%) were age 25 or younger, down from 56% in 2019. And 169 of the 551 offenders whose age was known in 2020 (31%) were minors (age 17 or younger), compared to 46% in 2018 and 2019.

---

<sup>17</sup>. *Id.*

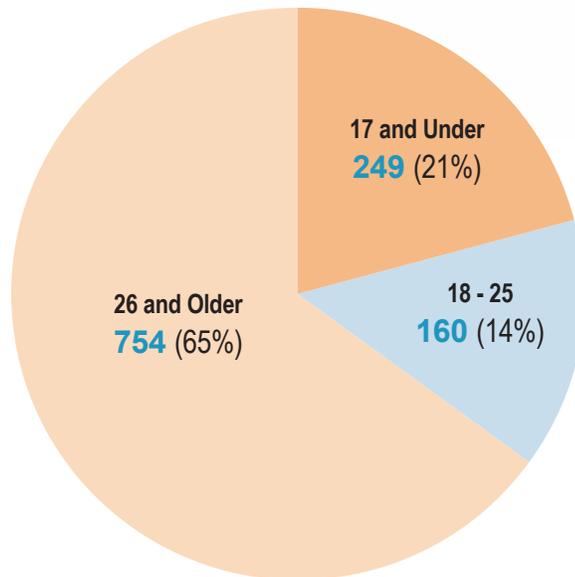

Similarly, in 2020, 249 of the 1163 individual victims of reported bias offenses were minors (21%), compared to 36% in 2019. And factoring in all young people, 27% of all victims of reported bias incidents in 2020 (309 out of 1163) were age 25 or younger, down from 48% in 2019 (397 out of 822). That attacks against young people fell in a year when the overall number of reported bias incidents rose markedly is notable. It suggests that offenders targeted adults over the age of 25 both in greater numbers and in greater proportions compared to prior years.

## Known Bias Incident Offenders by Age, 2020

26 and Older **319**  
 17 and Under **169**  
 18 - 25 **63**

## Bias Incident Victims by Age, 2020

26 and Older **754**  
 17 and Under **249**  
 18 - 25 **160**

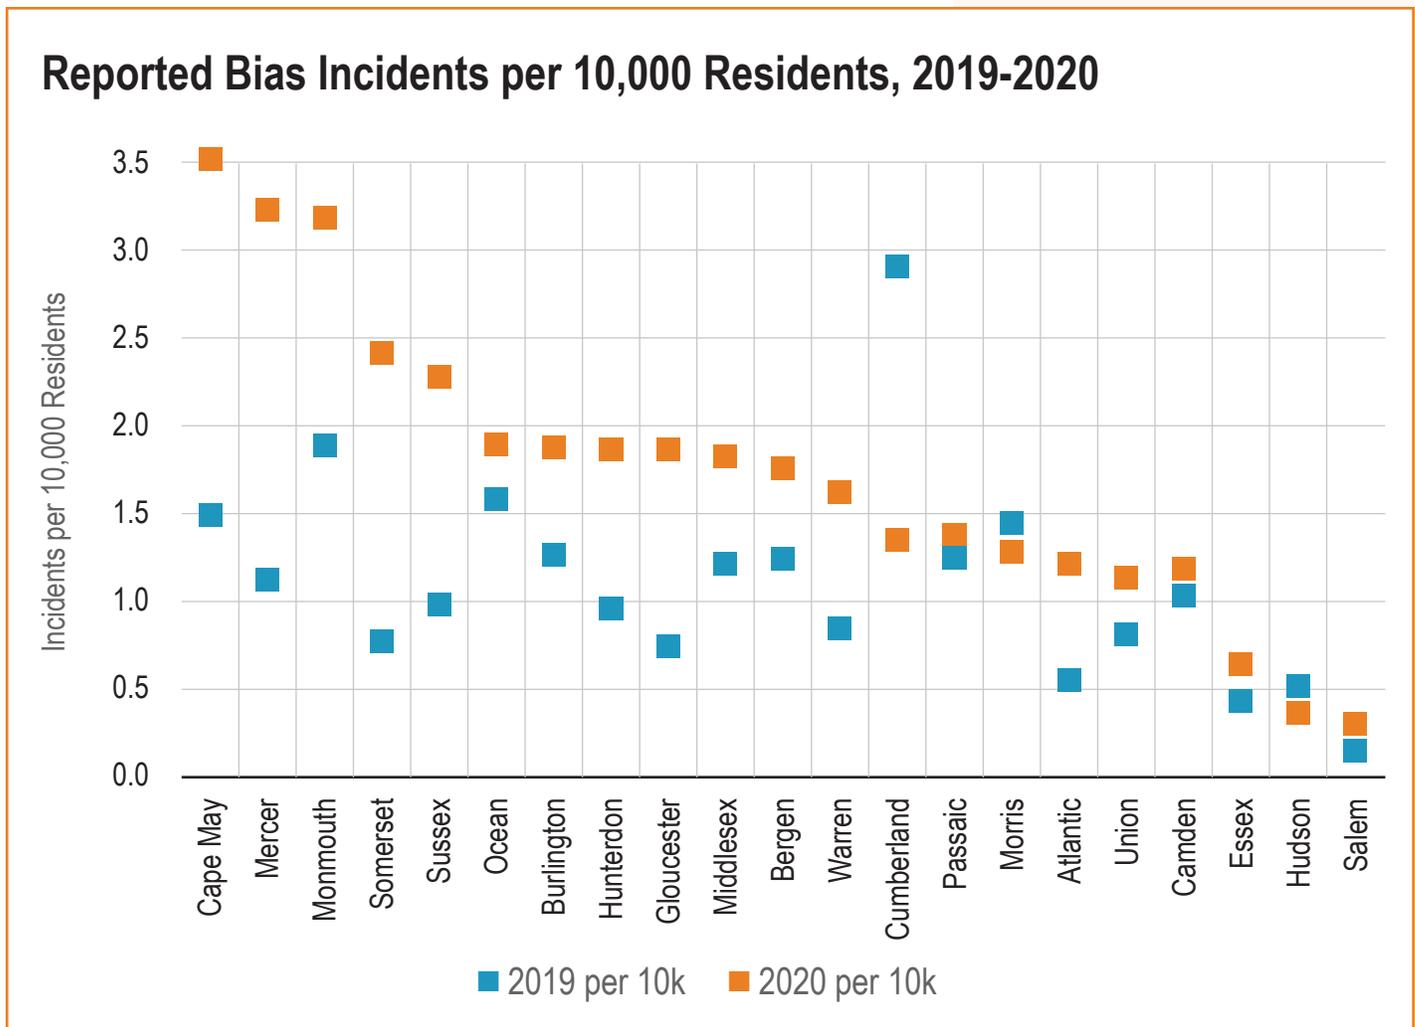

### *D. Bias Incidents by County*

From 2019 to 2020, all but three counties reported an increase in the number of reported bias incidents; only Cumberland, Morris, and Hudson Counties reported a decrease. Cumberland County reported a decrease from 44 reported bias incidents in 2019 to 20 in 2020; Morris County reported a decrease from 72 to 64; and Hudson reported a decrease from 36 to 25.

Cape May, Mercer, Sussex, Somerset, Gloucester, Hunterdon, and Atlantic Counties had the largest proportional increase in 2020 compared to 2019. The number of reported bias incidents in Mercer County, for example, more than doubled, from 42 in 2019 to 118 in 2020, while the number of reported bias incidents in Somerset almost tripled, from 27 in 2019 to 79 in 2020.

All 21 counties had more than one reported bias incident per 10,000 residents in 2020. By comparison, only 11 counties had more than one reported bias incident per 10,000 residents in 2019. Cape May County reported the highest rate of reported bias incidents per capita in 2020, with 3.5 reported bias incidents per 10,000 residents. Mercer County and Monmouth County tied with the second highest rate at 3.2.

The following chart and table show a 2019 to 2020 comparison of reported bias incidents per 10,000 residents in each county in New Jersey, reflecting that all but three counties experienced an increase in the number of reported bias incidents.

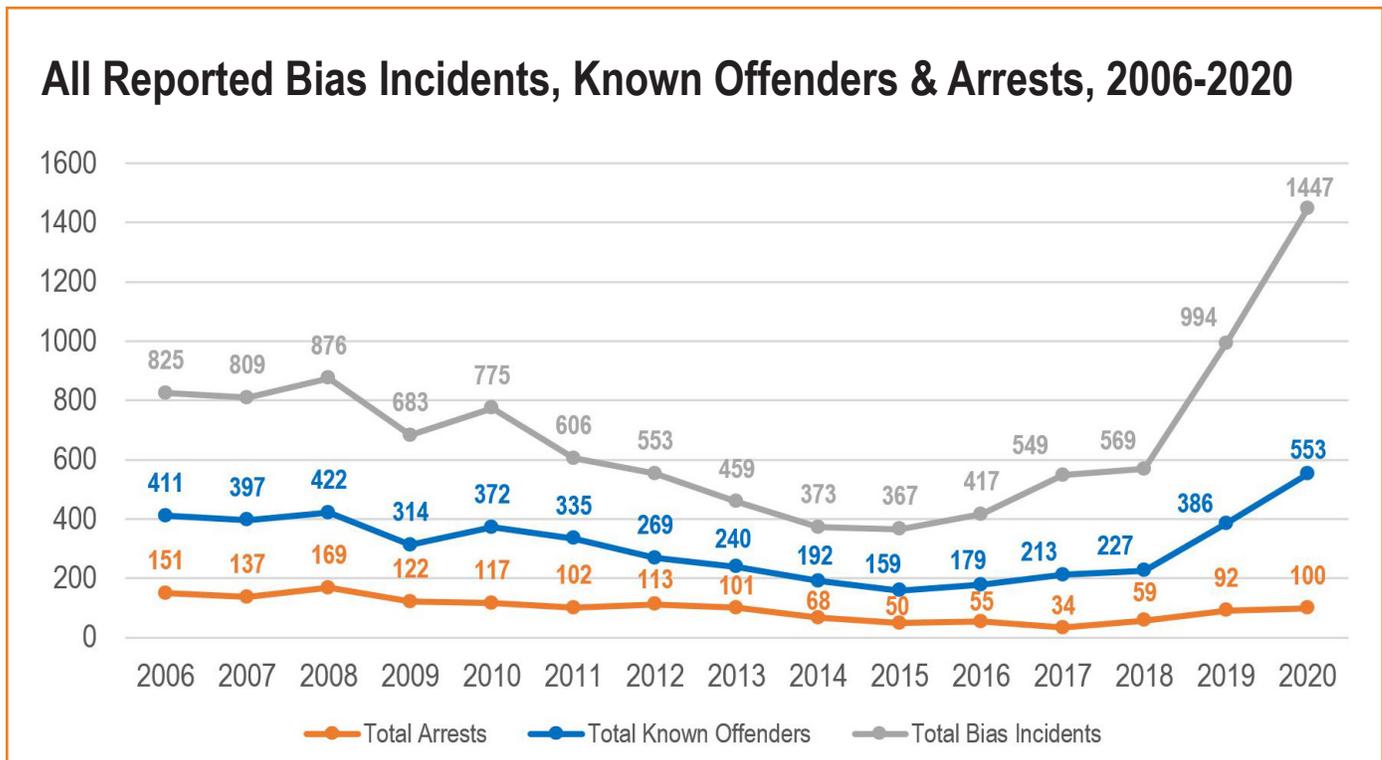

**Detail: Reported Bias Incidents  
per 10,000 Residents, 2019-2020**

<b>County</b>	<b>2019 Incidents per 10k Residents</b>	<b>2020 Incidents per 10k Residents</b>
Cape May	1.5	3.5
Mercer	1.1	3.2
Monmouth	1.9	3.2
Somerset	0.8	2.4
Sussex	1.0	2.3
Ocean	1.6	1.9
Burlington	1.2	1.9
Hunterdon	1.0	1.8
Gloucester	0.8	1.8
Middlesex	1.2	1.8
Bergen	1.2	1.8
Warren	0.8	1.6
Cumberland	2.9	1.4
Passaic	1.3	1.4
Morris	1.4	1.3
Atlantic	0.6	1.2
Union	0.8	1.1
Camden	1.0	1.1
Essex	0.4	0.6
Hudson	0.5	0.4
Salem	0.2	0.3

## E. Arrests

In 2020, New Jersey law enforcement made 100 arrests for reported bias incidents, as compared to 92 arrests in 2019. From 2006 to 2020, New Jersey law enforcement made 1470 arrests resulting from reported bias incidents. Of those arrests, 1001 (68%) of the perpetrators were adults, and the remainder were juveniles. The following chart shows total reported bias incidents, known offenders, and arrests from 2006 to 2020. The data reflects an increasing gap between the number of reported bias incidents and arrests, but not the reasons for that gap. Reasons for that shift may include, among other things, changes in the nature of reported bias incidents, changes in the rates at which victims decline to press charges, and the apparent shift towards allegations of bias incidents occurring in virtual settings.

## IV. Potential Causes & Social Factors Contributing to the Rise in Reported Bias Incidents

This report identifies three major potential reasons for the rise in reported bias incidents in 2020: the COVID-19 pandemic, racist backlash against protests for racial justice, and the 2020 Presidential election.

### *The COVID-19 Pandemic*

Perhaps the most significant event in 2020 was the COVID-19 pandemic. Seemingly overnight, people around the world were expected to stay home, socially distance from their closest friends and family, and wear personal protective equipment (PPE) in public. The pandemic quickly grew in intensity, overwhelming hospitals and morgues across the globe. Businesses shuttered, jobs were lost, families split apart. And New Jersey residents found themselves on the front lines of a global public health crisis.

COVID-19 brought with it an increase in bias and prejudice, creating an environment in which hatred and persistent “othering” could resurface and intensify. This context likely played a role in the spike in reported bias incidents in New Jersey in 2020.

That is especially true when it comes to anti-Asian racism. The first reported case of COVID-19 occurred in late 2019 in Wuhan, China. Within three months, the virus had traveled across the globe, but it still provided an excuse for anti-Asian hate in New Jersey.<sup>18</sup> In April, an Asian woman walking near a park was allegedly approached by eight young men and told she had “coronavirus eyes” and must have the coronavirus because she is Asian, before allegedly being struck in the back of the neck with an unknown object, possibly a fist.

---

18. The spike in anti-Asian incidents was not unique to New Jersey. It is reflected across the United States; the organization Stop AAPI Hate reported 3,795 anti-Asian bias incidents in the country over the course of the pandemic, up by over 1,000 since the previous year. Russell Jeung et al., *Stop AAPI Hate National Report*, 1 (2021), <https://secureservercdn.net/104.238.69.231/a1w.90d.myftpupload.com/wp-content/uploads/2021/03/210312-Stop-AAPI-Hate-National-Report-.pdf>.

Neither this incident nor other anti-Asian incidents occurred in a vacuum. They followed President Donald Trump labeling COVID-19 the “Chinavirus” and “Wuhan flu.” That language was repeated across the country, including by people committing bias incidents.<sup>19</sup> Anti-Asian hate in this country, though, has a more than 100 year-long history, when white nativists spread propaganda warning of the “yellow peril,” a racist phrase coined to convince many Americans that Asian immigration was a creeping threat to the United States. In 1882, the Chinese Exclusion Act banned Chinese immigrants from entering the country, the first law in U.S. history to ban any type of immigration on the basis of race.<sup>20</sup>

The pandemic likely also contributed to anti-Black bias incidents. A portion of the anti-Black bias incidents reported in 2020 stemmed specifically from COVID-19-related conflicts. A number appear to have occurred when Black people were in a position of authority attempting to enforce mask mandates against white people. For example, a Black employee allegedly attempted to stop a white man from entering a store for not wearing a mask. The man allegedly called the employee the n-word, telling him, “I have a .45 for you.” The man then allegedly went back to his truck and pulled out a handgun, pointing it straight at the Black employee, and continued to argue before finally leaving.

---

19. Sean Darling-Hammond and Eli K. Michaels, “After ‘The China Virus’ Went Viral: Racially Charged Coronavirus Coverage and Trends in Bias Against Asian Americans,” *Health Education and Behavior* (December 2020), <https://journals.sagepub.com/doi/pdf/10.1177/1090198120957949>.

20. Anti-Asian hate in the United States started almost immediately after Chinese people began to emigrate in larger numbers to the United States in the late nineteenth century, with white nativists spreading propaganda portraying Asian immigrants as backward, unclean, and fundamentally unsuited for U.S. citizenship. See Adrian De Leon, “The long history of racism against Asian Americans in the U.S.,” *PBS News Hour*, Apr. 9, 2020, <https://www.pbs.org/newshour/nation/the-long-history-of-racism-against-asian-americans-in-the-u-s>.

The COVID-19 pandemic also created new ways for people to act out their bias. For example, there were a number of “Zoom bombing” incidents, including against synagogue services. There were also multiple reports of unauthorized people entering Zoom meetings and using racial, ethnic, and religious slurs. And the shift towards bias incidents reported as occurring in “other/unknown” settings (including online settings) from 67 in 2019 to 308 in 2020 and at residences/homes from 183 in 2019 to 359 in 2020 reflect the shifts in our lives from brick-and-mortar schools (down from 293 in 2019 to 128 in 2020) and workplaces to home and virtual settings.

Anti-Jewish incidents were also related to COVID-19. Jewish people were subject to verbal assaults and blamed for the pandemic. In one incident, the offender allegedly told a Jewish person that “you f\*\*\*\*\* Jews and not wearing masks are the reason why this virus is spreading.”

The social and psychological upheaval of the pandemic cannot be overstated. As all crises do, it broke open existing divisions in our society. It provided new opportunities to capitalize on people’s vulnerabilities in a difficult and scary time, and led to anti-Black, anti-Asian, and anti-Semitic incidents.

### ***Racist Backlash Against the Black Lives Matter Movement***

On May 25, 2020, George Floyd was murdered in broad daylight, on a public street in Minnesota in front of dozens of bystanders. A white police officer, Derek Chauvin, knelt on Floyd’s neck for over nine minutes, as two other officers kept people from intervening in the attack, while Floyd cried out: “Please, the knee in my neck, I can’t breathe, sir;” “Don’t kill me;” “Momma, I love you. Tell my kids I love them. I’m dead;” “I can’t breathe.”<sup>21</sup>

---

21. Richard A. Oppel Jr. and Kim Barker, “New Transcripts Detail Last Moments for George Floyd,” New York Times, Jul. 8, 2020, <https://www.nytimes.com/2020/07/08/us/george-floyd-body-camera-transcripts.html>.

Within hours, the largest protest movement in American history had begun, facilitated by social media and increased visibility of the Black Lives Matter movement. It was both a spontaneous eruption – with demonstrations beginning in Minneapolis and sweeping across the country – and the result of decades of community organizing and activism. They marched to declare, in no uncertain terms, that Black Lives Matter.

According to the best available data, 94% of the protests that summer were peaceful, including many of those that took place in New Jersey.<sup>22</sup> However, there were still bias incidents in direct response to these protests. For example, as a Black Lives Matter demonstration passed by, a person allegedly came outside and made lynching gestures toward the protesters.

One incident of alleged harassment, referenced in the introduction of this report, became national news. While a Black Lives Matter protest marched by, counter-protesters reportedly yelled “Black lives matter to no one” while one white man reportedly knelt on another white man’s neck, yelling, “This is what happens when you don’t comply with the cops,” and, “It’s his fault he’s dead, not the cop.”

Even outside of protests, as support for racial justice became more visible in New Jersey during 2020, racial justice supporters were increasingly targeted. After a religious institution put up a large “Black Lives Matter” banner on their property, someone allegedly added a piece of plywood spray-painted with “all lives matter.”

DCR’s review of the year’s bias incident reports reflected that the backlash against the racial justice movement in 2020 also led to other racial and ethnic minorities being targeted for standing in solidarity with Black lives.

---

22. The Armed Conflict Location & Event Data Project, *A Year of Racial Justice Protests: Key Trends in Demonstrations Supporting the BLM Movement* (May 2021), [https://acleddata.com/acleddatanew/wp-content/uploads/2021/05/ACLED\\_Report\\_A-Year-of-Racial-Justice-Protests\\_May2021.pdf](https://acleddata.com/acleddatanew/wp-content/uploads/2021/05/ACLED_Report_A-Year-of-Racial-Justice-Protests_May2021.pdf).

This is part of a recurring pattern in American history: progress in the fight for racial justice is often followed by a racist backlash. For example, when constitutional amendments ended most legal slavery and granted citizenship and the right to vote to Black Americans for the first time, a violent backlash followed, including white supremacist organizations carrying out more than 2,000 documented lynchings and 34 documented massacres. Similarly, during the Civil Rights Movement of the 1960s, Black children integrating previously all-white schools faced white mobs screaming racial slurs, spitting on them, and throwing stones or bricks at their school buses,<sup>23</sup> and Black families integrating previously all-white neighborhoods faced violence and intimidation ranging from racial slurs to cross burnings on their front lawns, family pets being killed, and family members being assaulted.<sup>24</sup>

The 686 times anti-Black bias was a reported motivation for incidents targeting Black people in New Jersey shows that while millions of Americans may have opened their eyes to the realities of racial injustice in 2020, others hardened their racist views and felt comfortable acting on those prejudices.

### ***Political Rhetoric and the 2020 Presidential Election***

The rise in bias incidents in 2020 also cannot be explained without reference to the political climate around the 2020 federal election. From President Trump to local politicians, the political rhetoric of 2020 too often stereotyped, demeaned, and scapegoated

immigrants, people of color, members of the LGBTQ+ community, women, religious minorities, and others. President Trump shared a video on Twitter of a pro-Trump golf cart parade, in which one supporter yelled, “White power.”<sup>25</sup> And at least one nationwide survey in 2020 found 54 criminal cases in which President Trump’s rhetoric was invoked “in direct connection with violent acts, threats of violence, or allegations of assault.”<sup>26</sup> Based on DCR’s review, at least 85 of the reported bias incidents in New Jersey related directly to political rhetoric and the Presidential election.

The rhetoric leading up to the election continued to instigate conflict after Election Day and into 2021, where preliminary data already reflects a continued rise in bias incidents.

26. Mike Levine, “No Blame? ABC News finds 54 cases invoking ‘Trump’ in connection with violence, threats, alleged assaults,” ABC News, May 30, 2020, <https://abcnews.go.com/Politics/blame-abc-news-finds-17-cases-invoking-trump/story?id=58912889>.

## V. Conclusion

As evidenced by this report, reported bias incidents in New Jersey continue to rise at an alarming rate. The jump from 994 total reported bias incidents in 2019 to 1447 in 2020 is considerable on its own. Coupled with other increases in recent years, the trend is disturbing. This report is a step towards understanding that trend, laying bare the impact of hate and dehumanization, and putting an end to bias incidents in our State.

However, it is not enough to simply document reported bias incidents accurately and completely. This year's report is a reminder that we must take heed to the rise in reported bias incidents and address hate, bias, and prejudice among our communities, lest the tide of hate continue. It is imperative that we continue to engage the community, government officials, law enforcement, educators, and residents to ensure that bias and hate have no place in our great State. To report a bias incident, please visit the State's online reporting tool called NJBIAS, available at <https://bias.njcivilrights.gov>.<sup>27</sup>

---

27. Depending on what type of bias incident you are reporting, you may want to consider also reporting to the NJ Division on Civil Rights (DCR). DCR enforces the NJ Law Against Discrimination (LAD), and can get money damages and equitable relief for people who have been discriminated against or subjected to bias-based harassment in employment, housing, or places of public accommodation based on race, religion, national origin, gender, sexual orientation, gender identity, gender expression, disability, and other protected characteristics. You can also report a violation of the NJ Family Leave Act (NJFLA), which provides eligible employees of covered employers up to 12 weeks of job-protected leave in 24 months to care for a family member, or a violation of the Fair Chance in Housing Act (FCHA), which bars housing providers from asking about criminal history on housing applications in most instances. Please visit [njcivilrights.gov](http://njcivilrights.gov) for more information about the LAD, NJFLA, and FCHA.
