

NEW JERSEY YOUNG DRIVERS

17 TO 20 YEARS OF AGE

2006

Motor vehicle crashes are the leading cause of death for young people between the ages of 15 to 20 nationwide. In New Jersey, young drivers are also disproportionately involved in crashes. The term young driver in this report refers to drivers 17-20 years of age. The crash data used for this report was compiled from the crash record system maintained by the New Jersey Department of Transportation (DOT). The population data was obtained from the U.S Bureau of Census, 2006 population estimates.

In 2006, there were a total of 555,026 drivers involved in crashes in New Jersey. Of that number, 458,932 or 83 percent were reported with a known age. A total of 55,792 or 12 percent of those represented in a crash were young drivers. During the past five years, the number of young drivers involved in motor vehicle crashes decreased by 5 percent from 58,681 in 2002 to 55,792 in 2006.

In 2006, there were 6 million licensed drivers in New Jersey. Young drivers accounted for 343,092 or 5 percent of the driving population. Graph 1 reveals the percentage of licensed drivers and drivers involved in crashes by age group. In general, drivers under 36 years of age possessed the highest crash incident rate. The largest gap between the percent of involvement in crashes and licensed drivers was found to be drivers between 17-20 years of age.

Table 1 depicts the number of drivers involved in crashes by age group and the crash involvement rate per 100 licensed drivers. In 2006, for every 100 licensed drivers there were eight drivers on average involved in crashes. For every 100 young drivers that were licensed, 16 were involved in crashes or more than double the crash involvement rate. In addition, one out of six young drivers was involved in an automobile crash. By contrast, elder drivers over 70 years of age were at the lowest risk. For every 100 licensed drivers in this age group, five were involved in crashes.

Graph 1: Comparison of Drivers Involved in Crashes by Age Group

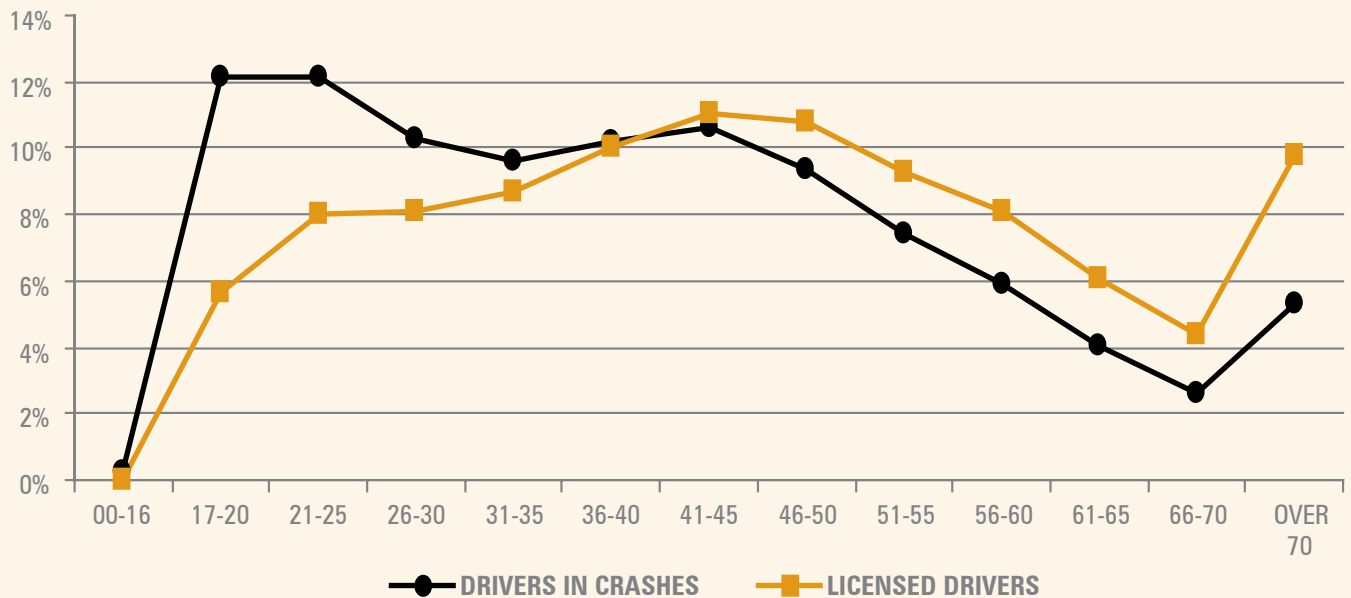

Table 1: Number of Drivers Involved in Crashes, Number of Licensed Drivers and Crash Involvement Rate Per 100 Licensed Drivers

AGE GROUP	TOTAL NUMBER OF DRIVERS INVOLVED IN CRASHES	TOTAL NUMBER OF LICENSED DRIVERS	DRIVER CRASH INVOLVEMENT RATE PER 100 LICENSED DRIVERS
UNDER 17	1,146	N/A	N/A
17-20	55,792	343,092	16.3
21-25	55,816	487,073	11.5
26-30	47,125	490,043	9.6
31-35	44,102	528,095	8.4

UNKNOWN	96,094		
TOTAL	555,026		

Table 2 shows the involvement of young drivers in crashes by gender. Males were involved in 57 percent of crashes compared to 43 percent for females.

GENDER	NUMBER	PERCENTAGE
FEMALE	22,779	43
MALE	29,604	57
TOTAL KNOWN GENDER	52,383	
UNKNOWN	3,409	
GRAND TOTAL	55,792	

Information regarding young drivers by physical condition is shown in Table 3. According to the information available, 15 percent of young drivers were injured in a crash. The injuries ranged from fatal injuries to complaint of pain.

PHYSICAL CONDITION	DRIVERS
KILLED	44
INCAPACITATED	155
MODERATE INJURY	1,633
COMPLAINT OF PAIN	6,180
UNKNOWN	236
MISSING INFORMATION	43,956

Graph 2 and Table 4 illustrates information regarding young drivers involved in crashes by month. Graph 2 indicates that there was an overrepresentation of crashes during the month of June. Table 4 reports monthly

incidence over a five-year period from 2002 to 2006. Once again, there was an overrepresentation in June. The month with the least number of drivers involved in crashes for the five-year period was February.

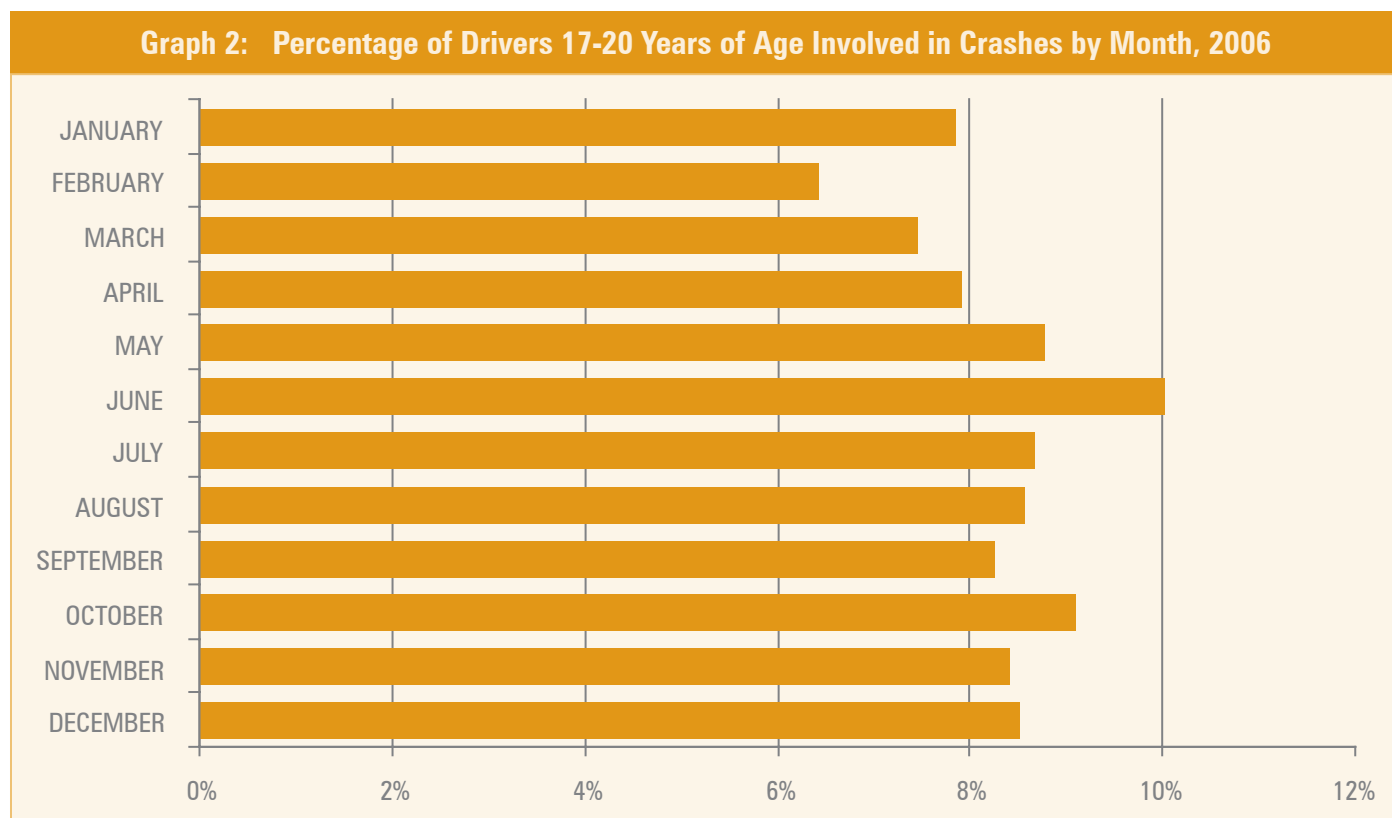

Table 4: Number and Percentage of Young Drivers Involved in Crashes by Month, 2002-2006

Young driver involvement in crashes by day of the week is revealed in Graph 3. The majority of crashes occurred on a Friday. Table 5 presents the data over a five-year period from 2002 to 2006. Over the five-year period,

Friday was consistently the day in which most crashes occurred for young drivers. In contrast, Sunday was the day in which the least number of motor vehicle crashes occurred for this age group.

Graph 4 shows young driver involvement in crashes by time of day. The majority of the crashes occurred between the hours of 3:00 p.m. - 6:00 p.m. Table 6 presents the same information for a five year period. Over the five

year period, the same time period was overrepresented in crash involvement. Nearly half of all crashes occurred between Noon to 6:00 p.m.

Contributing circumstances is shown in Table 7. Driver inattention at 24.2 percent was the primary reason why young drivers were involved in a crash followed by unsafe

speed at 6.7 percent and failure to yield the right of way at 5.3 percent.

The New Jersey map depicts young driver injury rates per 100 young populations by county. The statewide young driver injury rate is 14 per 100 population. The counties with the highest rates were: Ocean (20), Somerset (19), Cape May (18), Sussex (18), Monmouth (18), Warren

(16), Atlantic and Hunterdon (16). It should be noted that this rate doesn't take into account an increased level of summer tourism in shore areas. By contrast, Hudson County had the lowest rate of 6 per 100 population.

Young Driver Motor Vehicle Injury Rate Per 100 Young Population by County, 2006

The number and percentage of young drivers involved in motor vehicle crashes by county from 2002-2006 is presented in Table 8. Middlesex and Bergen Counties

had the highest percentage of young drivers involved in crashes during this period.

Table 8: Number and Percentage of Young Drivers Involved in Crashes by County, 2002-2006

The percentage of young drivers involved in crashes has been highest in the Central Region. The percentage of drivers involved in crashes increased from 42 percent in 2005 to 44 percent in 2006. The North Region percentage

range decreased from 37 percent in 2002 to 34 percent in 2006. The lowest percentage of crash involvement was found in the South Region at 21 percent in 2002 and 22 percent for the rest of the period (Graph 5).

Graph 5: Percentage of Young Drivers Involved in Crashes by Region, 2002-2006

Table 9 reveals the number of young drivers involved in motor vehicle crashes in Region I. The following counties are found in Region I: Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester and Salem. The City of Vineland experienced the most injuries

with 2,929. During the five-year period, 22 percent of all young driver crashes occurred in this region. The first ten municipalities listed in Table 9 accounted for 33 percent of all young driver crashes in Region I.
