Sewer Data Sources

March, 1989

The Preliminary
State
Development
AND
Redevelopment
Plan

This document accompanies the Sewer Service Area maps prepared as part of the tier mapping for the Preliminary State Development and Redevelopment Plan. These maps were compiled from a variety of source maps from counties, municipalities, sewerage authorities, and the New Jersey Department of Environmental Protection, Division of Water Resources. The source maps were collected over a period of time, mainly from May 1987 to August 1988. In preparing the Sewer Service Area maps, each sewer service area delineated was numbered according to its source map.

The document lists these source maps in numerical order, along with key information about each map, such as date produced, scale, legend, and who the map was generated by. This data was compiled mostly from the maps themselves. As such, the information may be incomplete in places. Any information that can be added to complete the data or corrections to the existing data may be forwarded to the Office of State Planning, Cartography Unit.
