|----------------------------|--|----------|
| NUMBER: 20 | Tangent Guide Rail Terminal – ET Plus | 11/05/14 |
| CATEGORY: Safety | | |

As per Corrective Action Notice No. 084, the Department HAS suspended the use of Trinity Highway Products' ET-Plus as a Tangent Guide Rail Terminal. This product is no longer listed on the Department's Qualified Products List (QPL).

Effective immediately, on active construction projects, an ET-Plus may no longer be installed. Tangent Guide Rail Terminals that have already have been installed using an ET-Plus – are not required to be removed at this time. However, if a previously installed ET-Plus must be replaced due to crash damage, the unit must be replaced using a product on the currently approved QPL.

Trinity Highway Products has suspended the shipment of this product, so it is currently not available. However, some contractors may have units in stock, and Construction personnel must ensure these units are not installed.

If this change of removing the ET-Plus as an allowable product results in additional cost, the RE will prepare a Change Order and provide compensation in accordance with Subpart 104.03.03. The RE's attention is directed to the subparts concerning deleted work. Since the product is no longer commercially available, this should only be considered if the Contractor has an approved Materials Questionnaire for the product on file, and the product was already purchased.
