Subsection 906.03 of the 2007 Standard Specifications for Road and Bridge Construction has been revised to require that permanent casings only need to have the exterior surfaces cleaned and coated if they are used as a structural component within the drilled shaft.

The following revisions have been incorporated into the Standard Inputs (SI2007) as of June 11, 2018.

906.03 STEEL CASINGS FOR DRILLED SHAFTS
THE SECOND PARAGRAPH IS CHANGED TO:

For permanent casings, used as a structural component within the drilled shaft, clean and coat the exterior surfaces with prime coat of an inorganic zinc coating system as specified in 906.06.

Implementation Code R (ROUTINE)

Changes must be implemented in all applicable Department projects scheduled for Final Design Submission at least one month after the date of the BDC announcement. This will allow designers to make necessary plan, specifications, and estimate/proposal changes without requiring the need for an addenda or postponement of advertisement or receipt of bids.
