## APPENDIX F - PRELIMINARY CONSTRUCTION COST ESTIMATES

In advance of an economic impact analysis to be conducted as part of the next stage of the Portway Extensions program, preliminary construction cost estimates were prepared for the roadway infrastructure improvement concepts presented in Section $X$ of this report. The cost estimates follow the NJDOT preliminary estimation procedures. Following is a summary table of the infrastructure improvement costs (exclusive of any required right-of-way acquisition or extensive environmental remediation that may be required). Also presented are the computation sheets detailing the construction items, estimated quantities and unit costs for each recommended alternative concept.

## Table F-1

## Portway Extensions Concept Development Study Recommended Infrastructure Improvements

Preliminary Construction Cost Estimates

| Figure <br> Number | Alternative Concept Description | Cost <br> Estimate |
| :---: | :--- | ---: |
| X.3 | Northern Extensions | $65,000,000$ |
| X.4 | NJ Turnpike Interchange 15-W Area | $\$$ |
| X.5 | Hackensack River Bridge | $109,000,000$ |
| X.6 | NJ Turnpike Interchange 14-A Scheme 1 | $161,000,000$ |
| X.7 | NJ Turnpike Interchange 14-A Scheme 2 | $65,000,000$ |
| X.8 | NJ Turnpike Interchange 14 | $110,000,000$ |
| X.9 | Interim Newark Bay Bridge Improvement | $5,000,000$ |
| X.10 | Bayonne Bridge | $186,000,000$ |
| X.11 | Routes 1\&9 Northbound at Delancy Street | $4,000,000$ |
| X.12 | NJ Turnpike Interchange 13-A - Kapkowski Road Area | $8,000,000$ |
| X.13 | NJ Turnpike Interchange 13 | $40,000,000$ |
| X.14 | NJ Turnpike Interchange 12 Area | $7,000,000$ |
| X.15 | NJ Turnpike Interchange 10 Area | $11,000,000$ |
|  |  | $709,000,000$ |
|  | Total (w/14-A Scheme 1) | $\mathbf{7 5 4 , 0 0 0 , 0 0 0}$ |

Classification Number 1 - NEW CONSTRUCTION - English
Route PORTWAY EXTENSIONS Section/Contract \# NORTHERN EXTENSIONS PM UPC No.

EARTHWORK (must be calculated)

|  | Unit | Quantity | x Unit Price | Amount |
| :---: | :---: | :---: | :---: | :---: |
| Stripping (4-6" Depth) | Acre | 26 | 4,050 | 105,300 |
| Roadway Exc. Unclassified, See $(\mathbf{J})$ | C.Y. | 0 | 15 | 0 |
| Removal of Conc. Base \& Conc. Surface Courses, See (K) | S.Y. | 0 |  | 0 |
| Channel Excavation | C.Y. | 0 | 12.25 | 0 |
| Ditch Excavation | C.Y. | 0 | 10 | 0 |
| Borrow Excavation Zone 3, See (J) | C.Y. | 104,948 | 12 | 1,259,376 |
|  |  | 0 |  | 0 |
| EARTHWORK TOTAL | = |  |  | \$1,364,676 |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of $X$-section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | x Length | x Pavement *W.F. | $=$ Amount |
| :--- | ---: | :---: | ---: | ---: |
| B | 61 | 56,672 | 2.08 | $7,190,543$ |
| E |  | 156 | 800 | 4.17 |
|  |  |  | 520,416 |  |
|  |  |  | 0 |  |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  | 0 |  |

*Width Factors = Ratio of 12 foot wide lane to actual pavement width.
Example $=$ actual pavement width $=25$ foot $=25 / 12=2.08$ W.F.

## CONTEXT SENSITIVE DESIGN

Attach additional sheet detailing items and costs of context sensitive design work

## CULVERTS

COVER

| Type | Layout (3) | Skew (1) | Cover (2) | Cost Per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| Type 1 | Area w x L exceeds 1000 Sq. Feet | $\begin{array}{\|l\|} \hline 0-60 \\ \text { degrees } \end{array}$ | 0 to 10' | 114.75 |
|  |  |  | 10' to 20' | 147.25 |
|  | Short Culverts Difficult <br> Conditions under 1000 Square Feet | 0-60degrees | 0 to 10' | 203.50 |
|  |  |  | 10' to 20' | 235.00 |
| Type 2 | Area w x L exceeds 1000 Sq. Feet | 0-60 | 0 to 10' | 121.75 |
|  |  | degrees | 10' to 20' | 152.50 |
|  | Short Culverts Difficult <br> Conditions under 1000 Square <br> Feet | $\begin{aligned} & \hline 0-60 \\ & \text { degrees } \\ & \hline \end{aligned}$ | 0 to 10' | 203.50 |
|  |  |  | 10' to 20' | 235.00 |

For skews over 60 degrees it will be necessary to make a special analysis and establish a square meter price comparable to above.

| Description | Area Computation | $x$ Cost per Sq. Foot | $=$ Amount |
| :--- | :--- | :--- | :--- |
|  |  |  | 0 |
|  |  |  | 0 |
|  |  |  | 0 |
|  |  |  | 0 |

## BRIDGES

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 3 spans and 2 side spans (Max. Span 100 feet)
H = Clear Height 14 To 23 feet (4)
$\mathrm{L}=100$ to 400 feet \& all viaducts over 400 feet (5)

| Class | Layout | Skew (1) | Foundation (2) | $\begin{aligned} & \text { Cost per Sq. } \\ & \text { Foot } \\ & \hline \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| I | Width at Least 45 feet | $\begin{array}{\|l\|} \hline 0 \text { to } 40 \\ \text { Degrees } \end{array}$ | No Piles | 134.75 |
|  |  |  | Piles at Stub Abut. | 159.75 |
|  |  |  | Piles at Piers \& Stu | 174.75 |
|  |  | 40 to 60 Degrees | No Piles | 145.00 |
|  |  |  | Piles at Stub Abut. | 168.25 |
|  |  |  | Piles at Piers \& Stu | 181.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 3 spans and 2 side spans (Max. Span 100 feet) (3)
$\mathrm{H}=$ Clear Height 14 feet (4)
$L=$ under 400 feet

| Class | Layout | Skew (1) | Foundation (2) | Cost per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| II | L exceeds W Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 176.50 |
|  |  | Degrees | On Piles | 187.25 |
|  |  | 40 to 60 | No Piles | 219.75 |
|  |  | Degrees | On Piles | 273.25 |
| III | W exceeds L Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 226.75 |
|  |  | Degrees | On Piles | 299.25 |
|  |  | 40 to 60 | No Piles | 241.50 |
|  |  | Degrees | On Piles | 310.00 |
| IV | Width 30 -45 feetArea W $\times$ L under4500 Sq. Foot | 0 to 40 | No Piles | 295.50 |
|  |  | Degrees | On Piles | 396.75 |
|  |  | 40 to 60 | No Piles | 318.25 |
|  |  | Degrees | On Piles | 416.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
$L=100$ to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

*Pick appropriate percent based on the size, type and materials of existing structure

DRAINAGE (includes inlets and cross drains)

| Rural |  | 0 | 364356 |  | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | project length (miles) | x cost per mile |  | = Amount |  |
| Urban |  | 0 | 544280 |  |  |

The above are the total costs of basins, manholes, longitudinal and transverse pipes, underdrains, headwalls, protecting curbs, aprons, etc. for a divided highway with a depressed median. The costs are assumed to apply to 4, 6 or 8 lane sections since there will be no appreciable difference in the number of basins or the sizes or lengths of pipes.

Frontage Road \& Ramp Drainage

|  | 56,672 |  | 55 | 3,116,960 |
| :---: | :---: | :---: | :---: | :---: |
| length of ramp or frontage rd. in feet |  | $x$ cost per foot |  | = Amount |
| DRAINAGE TOTAL |  | = |  | \$3,116,960 |

## INCIDENTAL ITEMS

|  |  | Degrees | On Piles | 396.75 |
|  |  | 40 to 60 | No Piles | 318.25 |
|  |  | Degrees | On Piles | 416.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
$L=100$ to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

*Pick appropriate percent based on the size, type and materials of existing structure

DRAINAGE (includes inlets and cross drains)

| Rural |  | 0 | 364356 | 0 |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  | project length (miles) | $x$ cost per mile | $=$ Amount |

The above are the total costs of basins, manholes, longitudinal and transverse pipes, underdrains, headwalls, protecting curbs, aprons, etc. for a divided highway with a depressed median. The costs are assumed to apply to 4, 6 or 8 lane sections since there will be no appreciable difference in the number of basins or the sizes or lengths of pipes.

Classification Number 1 - NEW CONSTRUCTION - English

| Route | PORTWAY EXTENSIONS | Section/Contract \# HACKENSACK RIVER BRIDGE |
| :--- | :--- | :--- |
| PM | UPC No. |  |

EARTHWORK (must be calculated)

|  | Unit | Quantity | x Unit Price | Amount |
| :---: | :---: | :---: | :---: | :---: |
| Stripping (4-6" Depth) | Acre | $\bigcirc$ | 4,050 | 0 |
| Roadway Exc. Unclassified, See (J) | C.Y. | 0 |  | 0 |
| Removal of Conc. Base \& Conc. Surface Courses, See (K) | S.Y. | 0 |  | 0 |
| Channel Excavation | C.Y. | 0 | 12.25 | 0 |
| Ditch Excavation | C.Y. | 0 | 10 | 0 |
| Borrow Excavation Zone 3, See (J) | C.Y. | 0 |  | 0 |
|  |  | 0 |  | 0 |
| EARTHWORK TOTAL | = |  |  | 0 |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of $X$-section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | $x$ Length | x Pavement *W.F. | $=$ Amount |
| :--- | :--- | :---: | :---: | ---: |
| E |  | 156 | 200 | 6 |
|  |  |  |  | 187,200 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  | 0 |  |
|  |  |  | 0 |  |
|  |  |  | 0 |  |

*Width Factors = Ratio of 12 foot wide lane to actual pavement width.
Example $=$ actual pavement width $=25$ foot $=25 / 12=2.08$ W.F.

## Classification Number 1 - NEW CONSTRUCTION - English

| Route | PORTWAY EXTENSIONS | Section/Contract \# | NJTP INT 14A - SCHEME 1 |
| :--- | :--- | :--- | :--- |
| PM | UPC No. |  |  |

EARTHWORK (must be calculated)

|  | Unit | Quantity | x Unit Price | Amount |
| :---: | :---: | :---: | :---: | :---: |
| Stripping (4-6" Depth) | Acre | 22.9 | 4,050 | 92,745 |
| Roadway Exc. Unclassified, See (J) | C.Y. | 110,672 | 15 | 1,660,080 |
| Removal of Conc. Base \& Conc. Surface Courses, See (K) | S.Y. | 0 |  | 0 |
| Channel Excavation | C.Y. | 0 | 12.25 | 0 |
| Ditch Excavation | C.Y. | 0 | 10 | 0 |
| Borrow Excavation Zone 3, See (J) | C.Y. | 90,130 | 12 | 1,081,560 |
|  |  | 0 |  | 0 |
| EARTHWORK TOTAL | $=$ |  |  | \$2,834,385 |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of X -section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | $x$ Length | x Pavement *W.F. | $=$ Amount |  |
| :--- | :--- | :--- | :--- | ---: | ---: |
| B | 60 | 900 | 20.83 | $1,125,000$ |  |
| B |  | 60 | 620 | 6.25 | 232,500 |
| B | 60 | 7,010 | 4.17 | $1,752,500$ |  |
| B |  | 60 | 11,888 | 2.08 | $1,486,000$ |
|  |  |  |  | 0 |  |
|  |  |  |  | 0 |  |
|  |  |  |  | 0 |  |
|  |  |  |  | 0 |  |
|  |  |  |  | 0 |  |

## PAVEMENT TOTAL

*Width Factors = Ratio of 12 foot wide lane to actual pavement width.
Example $=$ actual pavement width $=25$ foot $=25 / 12=2.08$ W.F.

1 to 3 spans and 2 side spans (Max. Span 100 feet) (3)
$\mathrm{H}=$ Clear Height 14 feet (4)
$L=$ under 400 feet

| Class | Layout | Skew (1) | Foundation (2) | $\begin{array}{\|l\|} \hline \text { Cost per Sq. } \\ \text { Foot } \\ \hline \end{array}$ |
| :---: | :---: | :---: | :---: | :---: |
| II | L exceeds W Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 176.50 |
|  |  | Degrees | On Piles | 187.25 |
|  |  | 40 to 60 | No Piles | 219.75 |
|  |  | Degrees | On Piles | 273.25 |
| III | W exceeds LArea L x Wexceeds 4500Sq. Feet | 0 to 40 | No Piles | 226.75 |
|  |  | Degrees | On Piles | 299.25 |
|  |  | 40 to 60 | No Piles | 241.50 |
|  |  | Degrees | On Piles | 310.00 |
| IV | Width 30 -45 feetArea W x L under4500 Sq. Foot | 0 to 40 | No Piles | 295.50 |
|  |  | Degrees | On Piles | 396.75 |
|  |  | 40 to 60 | No Piles | 318.25 |
|  |  | Degrees | On Piles | 416.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
L = 100 to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

*Pick appropriate percent based on the size, type and materials of existing structure

DRAINAGE (includes inlets and cross drains)

| Rural | project length (miles) | 0 | 364356 | 0 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | $x$ cost per mile | = Amount |  |
| Urban |  | 1.6 | 544280 |  | 870,848 |

The above are the total costs of basins, manholes, longitudinal and transverse pipes, underdrains, headwalls, protecting curbs, aprons, etc. for a divided highway with a depressed median. The costs are assumed to apply to 4,6 or 8 lane sections since there will be no appreciable difference in the number of basins or the sizes or lengths of pipes.

Frontage Road \& Ramp Drainage

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
L = 100 to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

| Structure Description | Calculated Sq. Foot of Bridge Deck | $x$ Cost Per Square Foot | = Amount |

| Borrow Excavation Zone 3, See <br> (J) | C.Y. | 0 | 12 | 684,444 |
|  |  |  | 0 |  |
| EARTHWORK TOTAL | $=$ |  | $\$ 698,619$ |  |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of $X$-section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | $x$ Length | x Pavement *W.F. | $=$ Amount |
| :--- | :--- | :---: | :---: | ---: |
| B |  | 61 | 7,700 | 2.08 |
|  |  |  | 976,976 |  |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  | 0 |  |
|  |  |  | 0 |  |

*Width Factors = Ratio of 12 foot wide lane to actual pavement width.
Example $=$ actual pavement width $=25$ foot $=25 / 12=2.08$ W.F.

## CONTEXT SENSITIVE DESIGN

Attach additional sheet detailing items and costs of context sensitive design work

## CULVERTS

COVER

| Type | Layout (3) | Skew (1) | Cover (2) | Cost Per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| Type 1 | Area w x L exceeds 1000 Sq. Feet | $\begin{array}{\|l\|} \hline 0-60 \\ \text { degrees } \end{array}$ | 0 to 10' | 114.75 |
|  |  |  | 10' to 20' | 147.25 |
|  | Short Culverts Difficult <br> Conditions under 1000 Square Feet | 0-60degrees | 0 to 10' | 203.50 |
|  |  |  | 10' to 20' | 235.00 |
| Type 2 | Area w x L exceeds 1000 Sq. Feet | 0-60 | 0 to 10' | 121.75 |
|  |  | degrees | 10' to 20' | 152.50 |
|  | Short Culverts Difficult <br> Conditions under 1000 Square <br> Feet | $\begin{aligned} & \hline 0-60 \\ & \text { degrees } \\ & \hline \end{aligned}$ | 0 to 10' | 203.50 |
|  |  |  | 10' to 20' | 235.00 |

For skews over 60 degrees it will be necessary to make a special analysis and establish a square meter price comparable to above.

Classification Number 1 - NEW CONSTRUCTION - English
Route PORTWAY EXTENSIONS Section/Contract \# NEWARK BAY BRIDGE PM UPC No.

EARTHWORK (must be calculated)

|  | Unit | Quantity | x Unit Price | Amount |
| :---: | :---: | :---: | :---: | :---: |
| Stripping (4-6" Depth) | Acre | 0 | 4,050 | 0 |
| Roadway Exc. Unclassified, See (J) | C.Y. | 0 |  | 0 |
| Removal of Conc. Base \& Conc. Surface Courses, See (K) | S.Y. | 0 |  | 0 |
| Channel Excavation | C.Y. | 0 | 12.25 | 0 |
| Ditch Excavation | C.Y. | 0 | 10 | 0 |
| Borrow Excavation Zone 3, See (J) | C.Y. | 0 |  | 0 |
|  |  | 0 |  | 0 |
| EARTHWORK TOTAL | = |  |  | 0 |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of $X$-section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | x Length | x Pavement *W.F. | $=$ Amount |
| :--- | :--- | :---: | ---: | ---: |
| E |  | 200 | 8 | 249,600 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  | 0 |  |
|  |  |  | 0 |  |
|  |  |  | 0 |  |

*Width Factors = Ratio of 12 foot wide lane to actual pavement width.
Example $=$ actual pavement width $=25$ foot $=25 / 12=2.08$ W.F.

## CONTEXT SENSITIVE DESIGN

## BRIDGES

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 3 spans and 2 side spans (Max. Span 100 feet)
H = Clear Height 14 To 23 feet (4)
$\mathrm{L}=100$ to 400 feet \& all viaducts over 400 feet (5)

| Class | Layout | Skew (1) | Foundation (2) | Cost per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| I | Width at Least 45 feet | 0 to 40 Degrees | No Piles | 134.75 |
|  |  |  | Piles at Stub Abut. | 159.75 |
|  |  |  | Piles at Piers \& Stu | 174.75 |
|  |  | 40 to 60 Degrees | No Piles | 145.00 |
|  |  |  | Piles at Stub Abut. | 168.25 |
|  |  |  | Piles at Piers \& Stu | 181.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 3 spans and 2 side spans (Max. Span 100 feet) (3)
$\mathrm{H}=$ Clear Height 14 feet (4)
$L=$ under 400 feet

| Class | Layout | Skew (1) | Foundation (2) | Cost per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| II | L exceeds W Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 176.50 |
|  |  | Degrees | On Piles | 187.25 |
|  |  | 40 to 60 | No Piles | 219.75 |
|  |  | Degrees | On Piles | 273.25 |
| III | W exceeds L Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 226.75 |
|  |  | Degrees | On Piles | 299.25 |
|  |  | 40 to 60 | No Piles | 241.50 |
|  |  | Degrees | On Piles | 310.00 |
| IV | Width 30 -45 feetArea W $\times$ L under4500 Sq. Foot | 0 to 40 | No Piles | 295.50 |
|  |  | Degrees | On Piles | 396.75 |
|  |  | 40 to 60 | No Piles | 318.25 |
|  |  | Degrees | On Piles | 416.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
$L=100$ to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

| Structure Description | Calculated Sq. Foot of Bridge Deck | $\times$ Cost Per Square Foot | = Amount |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
$L=100$ to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

DRAINAGE (includes inlets and cross drains)

| Rural |  | 0 | 364356 |  | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | project length (miles) |  | mile | = Amount |  |
| Urban |  | 0 | 544280\| |  | 0 |

The above are the total costs of basins, manholes, longitudinal and transverse pipes, underdrains, headwalls, protecting curbs, aprons, etc. for a divided highway with a depressed median. The costs are assumed to apply to 4, 6 or 8 lane sections since there will be no appreciable difference in the number of basins or the sizes or lengths of pipes.

EARTHWORK (must be calculated)

|  | Unit | Quantity | x Unit Price | Amount |
| :--- | :--- | :--- | :--- | ---: |
| Stripping (4-6" Depth) | Acre | 2.5 | 4,050 | 10,125 |
| Roadway Exc. Unclassified, See <br> (J) | C.Y. |  |  |  |
| Removal of Conc. Base \& Conc. <br> Surface Courses, See (K) | S.Y. | 0 |  |  |
| Channel Excavation | C.Y. | 0 |  |  |
| Ditch Excavation | C.Y. | 0 | 0 |  |
| Borrow Excavation Zone 3, See <br> $(\mathbf{J})$ | C.Y. | 0 | 12.25 | 0 |
|  |  | 37,667 | 0 | 0 |
| EARTHWORK TOTAL | $=$ | 0 | 12 | 452,004 |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of $X$-section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | x Length | x Pavement *W.F. | = Amount |
| :---: | :---: | :---: | :---: | :---: |
| B | 61 | 845 | 2.08 | 107,214 |
| B | 61 | 845 | 2.5 | 128,863 |
| B | 61 | 344 | 3 | 62,952 |
| E | 156 | 200 | 3.33 | 103,896 |

DRAINAGE (includes inlets and cross drains)

| Rural |  | 0 | 364356 |  | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | project length (miles) |  | $x$ cost per mile | = Amount |  |
| Urban |  | 0 | 544280 |  | 0 |

The above are the total costs of basins, manholes, longitudinal and transverse pipes, underdrains, headwalls, protecting curbs, aprons, etc. for a divided highway with a depressed median. The costs are assumed to apply to 4,6 or 8 lane sections since there will be no appreciable difference in the number of basins or the sizes or lengths of pipes.

EARTHWORK (must be calculated)

|  | Unit | Quantity | x Unit Price | Amount |
| :---: | :---: | :---: | :---: | :---: |
| Stripping (4-6" Depth) | Acre | 15 | 4,050 | 60,750 |
| Roadway Exc. Unclassified, See (J) | C.Y. | 0 | 15 | 0 |
| Removal of Conc. Base \& Conc. Surface Courses, See (K) | S.Y. | 0 |  | 0 |
| Channel Excavation | C.Y. | 0 | 12.25 | 0 |
| Ditch Excavation | C.Y. | 0 | 10 | 0 |
| ```\|\begin{array}{l}{\mathrm{ Borrow Excavation Zone 3, See}}\\{(J)}\end{array}``` | C.Y. | 97,437 | 12 | 1,169,244 |
|  |  | 0 |  | 0 |
| EARTHWORK TOTAL | = |  |  | \$1,229,994 |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of $X$-section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | x Length | x Pavement *W.F. | = Amount |
| :---: | :---: | :---: | :---: | :---: |
| B | 61 | 13,154 | 2.08 | 1,668,980 |
| E | 156 | 1,600 | 2.08 | 519,168 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
| PAVEMENT TOTAL |  |  | = | \$2,188,148 |

*Width Factors = Ratio of 12 foot wide lane to actual pavement width.
Example $=$ actual pavement width $=25$ foot $=25 / 12=2.08$ W.F.

## CONTEXT SENSITIVE DESIGN

Attach additional sheet detailing items and costs of context sensitive design work

## CULVERTS

COVER

| Type | Layout (3) | Skew (1) | Cover (2) | Cost Per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| Type 1 | Area w x L exceeds 1000 Sq. Feet | $\begin{array}{\|l\|} \hline 0-60 \\ \text { degrees } \end{array}$ | 0 to 10' | 114.75 |
|  |  |  | 10' to 20' | 147.25 |
|  | Short Culverts Difficult <br> Conditions under 1000 Square Feet | 0-60degrees | 0 to 10' | 203.50 |
|  |  |  | 10' to 20' | 235.00 |
| Type 2 | Area w x L exceeds 1000 Sq. Feet | 0-60 | 0 to 10' | 121.75 |
|  |  | degrees | 10' to 20' | 152.50 |
|  | Short Culverts Difficult <br> Conditions under 1000 Square <br> Feet | $\begin{aligned} & \hline 0-60 \\ & \text { degrees } \\ & \hline \end{aligned}$ | 0 to 10' | 203.50 |
|  |  |  | 10' to 20' | 235.00 |

For skews over 60 degrees it will be necessary to make a special analysis and establish a square meter price comparable to above.

| Description | Area Computation | $x$ Cost per Sq. Foot | $=$ Amount |
| :--- | :--- | :--- | :--- |
|  |  |  | 0 |
|  |  |  | 0 |
|  |  |  | 0 |
|  |  |  | 0 |

## BRIDGES

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 3 spans and 2 side spans (Max. Span 100 feet)
H = Clear Height 14 To 23 feet (4)
$\mathrm{L}=100$ to 400 feet \& all viaducts over 400 feet (5)

| Class | Layout | Skew (1) | Foundation (2) | Cost per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| I | Width at Least 45 feet | 0 to 40 Degrees | No Piles | 134.75 |
|  |  |  | Piles at Stub Abut. | 159.75 |
|  |  |  | Piles at Piers \& Stu | 174.75 |
|  |  | 40 to 60 Degrees | No Piles | 145.00 |
|  |  |  | Piles at Stub Abut. | 168.25 |
|  |  |  | Piles at Piers \& Stu | 181.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 3 spans and 2 side spans (Max. Span 100 feet) (3)
$\mathrm{H}=$ Clear Height 14 feet (4)
$L=$ under 400 feet

| Class | Layout | Skew (1) | Foundation (2) | Cost per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| II | L exceeds W Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 176.50 |
|  |  | Degrees | On Piles | 187.25 |
|  |  | 40 to 60 | No Piles | 219.75 |
|  |  | Degrees | On Piles | 273.25 |
| III | W exceeds L Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 226.75 |
|  |  | Degrees | On Piles | 299.25 |
|  |  | 40 to 60 | No Piles | 241.50 |
|  |  | Degrees | On Piles | 310.00 |
| IV | Width 30 -45 feetArea W $\times$ L under4500 Sq. Foot | 0 to 40 | No Piles | 295.50 |
|  |  | Degrees | On Piles | 396.75 |
|  |  | 40 to 60 | No Piles | 318.25 |
|  |  | Degrees | On Piles | 416.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
$L=100$ to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

| Structure Description | Calculated Sq. Foot of Bridge Deck | x Cost Per Square Foot | = Amount |
| :---: | :---: | :---: | :---: |
| \#1 | 22,200 | 225 | 4,995,000 |

EARTHWORK (must be calculated)

|  | Unit | Quantity | x Unit Price | Amount |
| :--- | :--- | ---: | ---: | ---: |
| Stripping (4-6" Depth) | Acre | 3.8 | 4,050 | 15,390 |
| Roadway Exc. Unclassified, See |  |  |  |  |
| (J) | C.Y. | 0 | 15 | 0 |
|  |  |  |  |  |
| Removal of Conc. Base \& Conc. |  | 0 |  |  |
| Surface Courses, See (K) | S.Y. | 0 | 12.25 | 0 |
| Channel Excavation | C.Y. | 0 | 10 | 0 |
| Ditch Excavation | C.Y. | 27,496 | 0 |  |
| Borrow Excavation Zone 3, See <br> (J) | C.Y. | 0 | 12 | 329,952 |
|  |  |  | 0 |  |
| EARTHWORK TOTAL | $=$ |  | $\$ 345,342$ |  |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of $X$-section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | x Length | x Pavement *W.F. | = Amount |
| :---: | :---: | :---: | :---: | :---: |
| B | 61 | 3,700 | 2.08 | 469,456 |
| E | 156 | 900 | 2.08 | 292,032 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
| PAVEMENT TOTAL |  |  |  | \$761,488 |

*Width Factors = Ratio of 12 foot wide lane to actual pavement width.
Example $=$ actual pavement width $=25$ foot $=25 / 12=2.08$ W.F.

## CONTEXT SENSITIVE DESIGN

|  |  |  | Piles at Stub Abut. | 168.25 |
|  |  |  | Piles at Piers \& Stu | 181.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 3 spans and 2 side spans (Max. Span 100 feet) (3)
$\mathrm{H}=$ Clear Height 14 feet (4)
$L=$ under 400 feet

| Class | Layout | Skew (1) | Foundation (2) | $\begin{aligned} & \text { Cost per Sq. } \\ & \text { Foot } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| II | L exceeds W Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 176.50 |
|  |  | Degrees | On Piles | 187.25 |
|  |  | 40 to 60 | No Piles | 219.75 |
|  |  | Degrees | On Piles | 273.25 |
| III | W exceeds L Area L x W exceeds 4500 Sq. Feet | 0 to 40 | No Piles | 226.75 |
|  |  | Degrees | On Piles | 299.25 |
|  |  | 40 to 60 | No Piles | 241.50 |
|  |  | Degrees | On Piles | 310.00 |
| IV | Width 30 -45 feetArea $W \times L$ under4500 Sq. Foot | 0 to 40 | No Piles | 295.50 |
|  |  | Degrees | On Piles | 396.75 |
|  |  | 40 to 60 | No Piles | 318.25 |
|  |  | Degrees | On Piles | 416.25 |

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
$L=100$ to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

*Pick appropriate percent based on the size, type and materials of existing structure

DRAINAGE (includes inlets and cross drains)

| Rural |  | 0 | 364356 |  | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | project length (miles) |  | mile | = Amount |  |
| Urban |  | 0 | 544280 |  | 0 |

The above are the total costs of basins, manholes, longitudinal and transverse pipes, underdrains, headwalls, protecting curbs, aprons, etc. for a divided highway with a depressed median. The costs are assumed to apply to 4, 6 or 8 lane sections since there will be no appreciable difference in the number of basins or the sizes or lengths of pipes.

For the Bridge Sketch see the Construction Cost Estimation Preparation Manual
1 to 2 spans (Max. Span 125 feet)
H = Clear Height 14 feet (4)
$L=100$ to 250 feet

1. For skews over 60 degrees it will be necessary to make a special analysis and establish a square foot price comparable to above.
2. For very bad foundation conditions requiring unusual lengths or spacing of piles, it will be necessary to establish a square foot price.
3. For longer spans, adjust the cost per square foot to reflect increased cost of structural members.
4. For span bridges, it is expected the length of the side span will be in- creased in proportion to any increase in height. Because of the resultant increase in deck area, the square foot price will remain approximately the same in the range of heights shown. For extremely high structures (particularly for viaducts), square foot prices will have to be increased.
5. For structures over 400 foot long (viaducts), reduce the cost per square foot if repetitive span length and forming can be used. Reduce by $\$ 0.50$ for lengths from 400 to 600 feet and by $\$ 1.00$ for lengths over 600 feet. (Do not forget adjustments (3) and (4) above on viaducts).
6. For statically indeterminate structures, square foot prices will have to be established.

DRAINAGE (includes inlets and cross drains)

| Rural |  | 0 | 364356 | 0 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | project length (miles) |  | mile | = Amount |  |
| Urban |  | 1.7\| | 544280\| |  | 925,276 |

The above are the total costs of basins, manholes, longitudinal and transverse pipes, underdrains, headwalls, protecting curbs, aprons, etc. for a divided highway with a depressed median. The costs are assumed to apply to 4, 6 or 8 lane sections since there will be no appreciable difference in the number of basins or the sizes or lengths of pipes.

EARTHWORK (must be calculated)

|  | Unit | Quantity | x Unit Price | Amount |
| :---: | :---: | :---: | :---: | :---: |
| Stripping (4-6" Depth) | Acre | 5.8 | 4,050 | 23,490 |
| Roadway Exc. Unclassified, See (J) | C.Y. | 0 | 15 | 0 |
| Removal of Conc. Base \& Conc. Surface Courses, See (K) | S.Y. | 0 |  | 0 |
| Channel Excavation | C.Y. | 0 | 12.25 | 0 |
| Ditch Excavation | C.Y. | 0 | 10 | 0 |
| Borrow Excavation Zone 3, See (J) | C.Y. | 93,541 | 12 | 1,122,492 |
|  |  | 0 |  | 0 |
| EARTHWORK TOTAL | = |  |  | \$1,145,982 |

Suggested procedure for calculating earthwork:
A) Determine Typical section (number of lanes, median widths, side slopes, etc.).
B) Get latest topography map available.
C) Plot proposed alignment on topo map.
D) Develop profile using topo controls such as existing roads, streams, rivers and design manual.
E) Calculate Areas for the typical section in 1 foot increments of cut or fill.
F) At 10 to 60 foot intervals (depending on frequency of $X$-section changes) calculate the earthwork.
G) Calculate any other significant earthwork (ramps, cross-roads, etc.).
H) Make appropriate earthwork corrections for the pavement box and striping. Use 21 inch depth for rigid pavement, 26 inch depth for all flexible pavement and 4 inch depth for stripping.
I) Deduct any roadway excavation from borrow required to calculate Borrow Excavation Zone 3.
J) See Construction Cost Estimate Work Sheet (Section 3.1). This worksheet must be utilized for the most recent price information.
K) 11.2 to 12.5 , based on the quantity, location and type of project.

## PAVEMENT

12 FOOT WIDE LANE (from subgrade up)

| Pav't. Type | Description of Pavement | Cost/Linear Foot |
| :--- | :--- | :---: |
| A | 10 inch R.C. Pavement | 156 |
| B | 2 inch HMA Surf. Crs. \& 8 inch HMA Base | 61 |
| C | 3 inch HMA Surf. Crs. \& 4 inch HMA Base | 46 |
| D | 2 inch HMA Surf. Crs. \& 2 inch HMA Base | 22 |
| E | Bridge Approach \& Transition Slabs | 156 |

Computation Table for Pavement. Cost

| Type | Cost from table above | x Length | x Pavement *W.F. | Amount |
| :---: | :---: | :---: | :---: | :---: |
| B | 61 | 12,628 | 2.08 | 1,602,241 |
| E | 156 | 200 | 2.08 | 64,896 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
|  |  |  |  | 0 |
| PAVEMENT TOTAL |  |  |  | \$1,667,137 |

*Width Factors = Ratio of 12 foot wide lane to actual pavement width.
Example $=$ actual pavement width $=25$ foot $=25 / 12=2.08$ W.F.

## CONTEXT SENSITIVE DESIGN

Attach additional sheet detailing items and costs of context sensitive design work

## CULVERTS

COVER

| Type | Layout (3) | Skew (1) | Cover (2) | Cost Per Sq. Foot |
| :---: | :---: | :---: | :---: | :---: |
| Type 1 | Area w x L exceeds 1000 Sq. Feet | $\begin{array}{\|l\|} \hline 0-60 \\ \text { degrees } \end{array}$ | 0 to 10' | 114.75 |
|  |  |  | 10' to 20' | 147.25 |
|  | Short Culverts Difficult <br> Conditions under 1000 Square Feet | 0-60degrees | 0 to 10' | 203.50 |
|  |  |  | 10' to 20' | 235.00 |
| Type 2 | Area w x L exceeds 1000 Sq. Feet | 0-60 | 0 to 10' | 121.75 |
|  |  | degrees | 10' to 20' | 152.50 |
|  | Short Culverts Difficult <br> Conditions under 1000 Square <br> Feet | $\begin{aligned} & \hline 0-60 \\ & \text { degrees } \\ & \hline \end{aligned}$ | 0 to 10' | 203.50 |
|  |  |  | 10' to 20' | 235.00 |

For skews over 60 degrees it will be necessary to make a special analysis and establish a square meter price comparable to above.
